Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

+ *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.

+ *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.

+ *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.

+ *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter `http://books.google.com` durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

Digitized by Google

The date shows when this volume was taken.

All books not in use for instruction or research are limited to all borrowers.

Volumes of periodicals and of pamphlets comprise so many subjects, that they are held in the library as much as possible. For special purposes they are given out for a limited time.

Graduates and seniors are allowed five volumes for two weeks. Other students may have two vols. from the circulating library for two weeks.

Books not needed during recess periods should be returned to the library, or arrangements made for their return during borrower's absence, if wanted.

Books needed by more than one person are held on the reserve list.

Books of special value and gift books, when the giver wishes it, are not allowed to circulate.

INDEX.

ARTICLES, &c.

Adams, Prof., on How to be Interesting in Teaching, 225.
Adamson, Prof., on the Teaching of the Mother Tongue, 146.
Appointments and Vacancies, 25, 72, 144, 181, 221, 264, 300, 334, 394, 436, 474, 508.
Arithmetical Curiosities, 137.
Bevan, J. O., on Study after School-days, 476, 516.
Bowen, H. C., on the Uses of Books for Educational Purposes, 302.
Brown, W. C., and Shankland, R. J., on Teaching Foreign Languages, 266.
Classical Association, 294.
Cockburn, Sir J. A., on Manual Training, 222.

COLLEGE OF PRECEPTORS:—
Evening Meetings: see below.
General Meetings, 74, 336.
Meetings of Council, 29, 76, 139, 190, 223, 266, 297, 337, 431, 469, 518.
Pass Lists:—
Teachers' Diploma Examination.—Christmas, 1903, 77, 191; Summer, 1904, 479.
Certificate Examination.—Christmas, 1903, 101, 139; Midsummer, 1904, 351, 431.
Professional Preliminary Examination.—March, 1904, 190; September, 1904, 431.
Lower Forms Examination.—Christmas, 1903, 115; Midsummer, 1904, 363.
Certificate of Ability to Teach.—February, 1904, 191; May and June, 1904, 338; October, 1904, 516.

CORRESPONDENCE:—
Cheap Ordnance Survey Maps—A. J. Herbertson, 31.
Danger Threatening Secondary Education—J. O. Bevan, 261.
Diploma Examinations—G. J. Pass, 509.
Employer on After-School Study—W. E. Hipkins, 510.
"Esperanto"—M.A. Oxon., A. L. Schafer, J. C. O'Connor, 30; A. Hamonet, 76; E. A. Lawrence, 138.
Informal Educational Discussion—T. E. Page, 30.
London University Examination Papers—W. P. Goudie, 338.
Macaulay and German Theories—Gavin Hamilton, 470.
Position of Private Schools—Secondary Education, 296.
Puff Educational—J. Angell, 338.
Teaching of Botany Report—L. J. Clarke, 182.
Tenure of Assistant Masters—T. Allen, 139.
Try Denmark—J. S. Thornton, 296.

Current Events, 23, 71, 143, 179, 220, 263, 299, 333, 393, 435, 475, 507.
Daniel, Canon, 294.
Educational Science at Cambridge, 396.
Endowments and Benefactions, 24, 144, 180, 220, 264, 300, 334, 393, 436, 473, 507.
English in Secondary Schools, 438.

EVENING MEETINGS at the College of Preceptors, Papers read at:—
Teaching of the Mother Tongue: Prof. Adamson, 146.
How to be Interesting in Teaching: Prof. Adams, 225.
Methods of Teaching Modern Foreign Languages: W. C. Brown and R. J. Shankland, 266.
Uses of Books for Educational Purposes: H. C. Bowen, 302.
Study after School-days: Rev. J. O. Bevan, 476.
Is the New Geometry worth Preserving? Rev. Dr. D. L. Scott, 513.

Fixtures, 23, 71, 143, 179, 220, 263, 299, 333, 393, 435, 475, 507.
Foreign Languages, Methods of Teaching, 266.
History in Secondary Schools, 185.
Honours, 24, 72, 144, 180, 220, 263, 299, 333, 393, 435, 473, 507.
Hygiene, The Teaching of, 399.
India, University Education in, 258.
Inglis, A. M., on Private Schools and the Local Authority, 295.
Inspection of Private Secondary Schools, 439.
Interest in Teaching, 225.
International Association of Academies, 261.
Latin, Teaching of, 507.

LEADING ARTICLES:—
Co-education, 461.
Federation of Secondary Teachers, 287.
Future of the Schools, 214.
India's Chief Need, 384.
Inspection of Private Schools, 425.
Lessons from Norway, 501.

HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

Training College (non-Government Branch) for KINDERGARTEN TEACHERS and LOWER FORM MISTRESSES IN HIGH SCHOOLS.

HIGHBURY HILL HOUSE, N.

Principal—Rev. D. J. THOMAS, M.A.
Vice-Principal—Miss M. M. PENSTONE.

Students trained for the Examinations of the National Froebel Union.

Two Scholarships will be awarded to Students who have matriculated before entrance.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.

JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Telegrams—"Educatorio, London."

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

THE SOUTH OF ENGLAND PROFESSIONAL AGENCY.

CONDUCTED AT
CINTRA, WOOLSTON, SOUTHAMPTON,*
BY
HAYWOOD & CO. (20 years' professional experience).

THIS Agency undertakes all business in connexion with the Scholastic Profession. Special attention to Transfers, Partnerships, English, Foreign, and Colonial Pupils introduced. Detailed Scholastic Prospectus on application. No post-cards.

* Cintra is 15 minutes from the Docks Station and 3 from Woolston Station (L.S.W.R.).

AGENCE SCOLAIRE DU SUD DE L'ANGLETERRE.

À WOOLSTON, SOUTHAMPTON.

Directeurs: MM. HAYWOOD & CIE.

CETTE agence s'occupe de recommander aux parents anglais, ou nés dans les colonies anglaises: (*a*) de bonnes écoles ou pensions sur le Continent; (*b*) des pasteurs et des professeurs recevant chez eux un ou deux élèves; (*c*) des familles de bonne position sociale disposées à recevoir des pensionnaires pour un temps plus ou moins long; (*d*) de fournir aux parents étrangers désireux d'envoyer leurs enfants en Angleterre des renseignements détaillés sur les meilleures écoles du Midi et de l'Ouest de ce pays.

La longue expérience en matière d'éducation et la situation unique à Southampton donnent aux directeurs de précieux avantages. Pour un prospectus, s'adresser comme ci-dessus.

THE INCORPORATED

FROEBEL EDUCATIONAL INSTITUTE.

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

LONDON MATRICULATION.

Day and Evening Classes

FOR

MATRICULATION

COMMENCE

Monday, January 25th, 1904.

During the year 1903,

68

passes at Matriculation were assigned to

University Tutorial College

on the Official Pass Lists.

This number is more than double that assigned to any other institution in London.

Full particulars may be had from—

THE VICE-PRINCIPAL,
University Tutorial College,
Red Lion Square, Holborn, W.C.

COLLEGE OF PRECEPTORS.

LECTURES ON ELEMENTARY PHONETICS FOR TEACHERS OF ENGLISH, FRENCH, AND GERMAN.

To be delivered by Professor WALTER RIPPMANN, M.A.

The Lectures will be delivered at the College on Friday Evenings, at 7 o'clock, on the following dates:—November 6 and 20, December 4, 1903; January 29, February 12 and 26, March 11 and 25, 1904.

SYLLABUS.

I. Origin of speech—origin of writing—early writing roughly "phonetic"—the "historical" tendency in spelling—attempts to counteract it—the question of spelling reform in English—disadvantages of the conventional English and French spelling—general neglect of ear-training—current misconceptions—teachers of foreign languages must know the sound of the mother tongue—the organs of speech: the lungs—how to breathe—defective breathing.

II. The organs of speech: the throat—voiced and voiceless sounds—*h*—the mouth and the nose—vowels and consonants—tense and lax formation of sounds—standard speech—the alphabet of the Association phonétique internationale.

III. The vowel systems of English, French, and German, and their representation in the phonetic and the conventional spelling.

IV. The continuants and their representation.

V. Stops and nasals, and their representation. The speech of little children.

VI. Sounds in connected speech—*liaison*—strong and weak forms—dissimilation and assimilation.

VII. Length, force, and pitch—difficulties of English pronunciation—Northern English—"elocution"—the phonograph.

VIII. By way of recapitulation: first lessons in French and German.

Practical exercises will be given in the course of each Lecture, except the first.

C. R. HODGSON, B.A., *Secretary.*

WANTED, Energetic LADY-PARTNER, with small capital, to help to develop a high-class Branch School (already started) near well-established Senior School in North London. Good house; Boarders and Day Pupils received; excellent prospects. Write—DELTA, "Educational Times" Office, 89 Farringdon Street, London, E.C.

CARLYON COLLEGE.

55 AND 56 CHANCERY LANE.

LONDON UNIVERSITY EXAMINATIONS.

LONDON MATRICULATION, INTER. ARTS and SCIENCE, B.A., and B.Sc. Classes (small) Day and Evening. New Term end of January.

Classes and Tuition for **Legal and Medical Preliminaries, Accountants', Scholarship Examinations. Oxford and Cambridge, B.U.I., &c.**

Papers Corrected for Schools. Vacation Tuition. Private tuition for all Examinations.

Prospectus and full details on application to R. C. B. KERIN, B.A. Lond., First of First Class Classical Honours, Editor of "Phædo," "Pro Plancio," &c.

SUCCESSES.

1892-1903.—London Matric., 105; Inter. Arts, Sc., and Prel. Sci., 125, 6 in Hons.; B.Sc., 1896-1903, 23; B.A., 1891-1901, 63, 11 in Hons.; Medical Prelim., 150; many other Successes. Scholarships, R.U.I., Indian Civil, Oxford and Cambridge, &c.

B.A. LONDON, 1899-1902, 36 successful.
M.A., 4 (1898, 1899, 1901, 1902).
B.A., 1903, 10 out of 12.

LONDON COUNTY COUNCIL.

TECHNICAL EDUCATION BOARD.

COURSES of FREE LECTURES for TEACHERS (*a*) on "The Natural History of Plants," by Professor GEDDES, University College, Dundee (St. Andrews University); and (*b*) on "The Natural History of Man," by Dr. A. C. HADDON, F.R.S., Fellow of Christ's College, Cambridge, University Lecturer in Ethnology, Cambridge, will be given at the Horniman Museum, London Road, Forest Hill, S.E., on Saturday Mornings, at 11.30 o'clock, from January to May, 1904.

Titles of the Lectures:—

"THE NATURAL HISTORY OF PLANTS."

This Course is intended, so far as conditions permit, as a Practical Introduction to the Natural History of Plants, and will be devoted to the Botany of Early Spring.

Jan. 23.	Lec. 1.	WINTER.—An Introduction to the Study of the Seasons.
,, 30.	,, 2.	THE SIGNS OF SPRING.—An Introduction to the Study of Seasonal Natural History.
Feb. 6.	,, 3.	THE EARLY HARBINGERS.—An Introduction to the Study of Morphology.
,, 13.	,, 4.	THE CROCUSES.—An Introduction to the Study of Classification.
,, 20.	,, 5.	THE DAFFODILS.—An Introduction to the Study of Variation.
,, 27.	,, 6.	THE BULB: ITS LIFE AND USE.—An Introduction to the Study of Physiology.
Mar. 5.	,, 7.	(i.) BULBS IN THEIR HOMES AND HABITATS.—An Introduction to the Study of Geographical Distribution. (ii.) BULBS AND THEIR ADAPTATIONS.—An Introduction to the Study of Ecology.
,, 12.	,, 8.	BUDS: THEIR COVERINGS AND WAYS OF PACKING.
,, 19.	,, 9.	BUD-OPENING.—An Introduction to the Study of Development.
,, 26.	,, 10.	TULIPS.—An Introduction to the Study of Evolution.

"THE NATURAL HISTORY OF MAN."

This Course is intended to serve as an Introduction to the Geographical Distribution of Man.

Apr. 23.	Lec. 1.	(i.) INTRODUCTION. (ii.) RACES AND PEOPLES OF AFRICA.
,, 30.	,, 2.	RACES AND PEOPLES OF EUROPE.
May 7.	,, 3.	RACES AND PEOPLES OF ASIA.
,, 14.	,, 4.	RACES AND PEOPLES OF OCEANIA.
,, 21.	,, 5.	(i.) RACES AND PEOPLES OF AMERICA. (ii.) SUMMARY.

Admission by ticket only, to be obtained upon application to the CLERK OF THE COUNCIL, County Hall, Spring Gardens, S.W.

G. L. GOMME,
22nd December, 1903. *Clerk of the Council.*

CORRESPONDENCE TUITION,

Classes, or Private Lessons in all Subjects for all Examinations, &c., at moderate fees. Special tuition for MEDICAL Prelims. Many recent successes.—F. J. BORLAND, L.C.P. (Science and Math. Prizeman), Victoria Tutorial College, 87 Buckingham Palace Road, S.W.; 49 King William Street, E.C. (A. GODSELL); and Stalheim, Brunswick Road, Sutton, Surrey.

Schools visited and Examinations conducted.

SCHOOL BOARD FOR LONDON.

The services of ASSISTANT TEACHERS qualified to teach the subjects set out in Schedule V. of the New Code of the Board of Education, and specially qualified to teach the subjects named below, are required at the following Pupil Teachers' Schools:—

School.	Sex of Assistant.	Special Qualifications.
Southwark P. T. School, Southwark Park Road, S.E.	Man, or Woman.	French or Latin.
Stepney P.T. School, Trafalgar Sq. Stepney, E.	Woman.	Music (Both Notations) and English.

Salary—
Man: £150 per annum, rising by annual increments of £5 to £200.
Woman: £130 per annum rising by annual increments of £5 to £165.

Applications to be made on Form 40 P.T., on which, with other information, copies only of three testimonials must be given. A copy of this Form can be obtained from the Clerk of the Board. If a written application is made for one, it must be accompanied by a stamped and addressed envelope or wrapper.

Applications must be received by the Clerk of the Board, School Board Offices, Victoria Embankment, London, W.C., by or before the first post on Monday, January 18th, 1904.

Applicants who applied for the recently advertised vacancies for Assistants in the Board's Pupil Teachers' Schools can have the Form 40 P.T. they then submitted placed before the Committee on informing the Clerk of the Board by or before the first post on Monday, January 18th, 1904.

All communications on the subject of this notice should be marked outside "P.T. Schools."

Candidates from the country invited to attend the Committee will be allowed third-class return railway fare to London, or other reasonable travelling expenses and, if necessary, hotel expenses not exceeding ten shillings a day for two days. If application for such payment is made, it must be accompanied by receipted vouchers; but if a candidate, after being nominated, refuses to take up the appointment, these expenses will not be allowed.

Applicants who do not receive, on or before January 23rd, 1904, a summons to attend before the Committee, will understand that they have not been included in the list of candidates to be seen by the Committee, and will not be further communicated with.

FREE.

PROFESSOR DENNEY AND MR. LYDDON-ROBERTS,

AN ELEMENTARY AND INTERMEDIATE ALGEBRA

WITH EXERCISES AND ANSWERS.

By the Rev. J. LIGHTFOOT, D.Sc., M.A.,

Author of "Elementary Logic," &c.

Crown 8vo. 472 pp., strongly bound in Cloth. **Price 4s. 6d.**

This valuable new work covers all the Algebra generally required for the Preliminary and Intermediate Examinations at the Universities. A special feature is the very clear and interesting treatment of graphic methods.

Specimen pages post free on application.

"A well arranged practical book, well up to modern requirements."—*Head Teacher.*

"Logical development; principles rigorously established."—*Educational Times.*

"The teaching is unimpeachable and healthy. We wish success to this fine exposition of Algebra."—*Schoolmaster.*

"A first-rate book. It covers much ground, is full of lucid explanation, has abundant examples, is capitally planned, and possesses some unique features. Altogether, it should take a high place among the best of modern school books."—*Board Teacher.*

"Among newer mathematical text-books suitable for the use of young students there are few that have come under our notice that are so good as 'An Elementary and Intermediate Algebra,' by Dr. Lightfoot. . . . The book is a most commendable piece of work and deserving of high praise."—*School Guardian.*

"The matter is very logically arranged, and the illustrative examples are perfect models of mathematical reasoning and statement. Exercises for practice are supplied in profusion, to which answers are provided. This portion of the work has been very carefully supervised, and is remarkably free from errors."—*Teachers' Aid.*

PROFESSOR MEIKLEJOHN'S SERIES.

Second Edition. 410 pp. Price **2s. 6d.**

A SCHOOL GEOGRAPHY.

With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A., F.R.G.S.

"This is a well-planned book, with many good features, and the promise of the title-page is sedulously fulfilled."—**The Educational Times.**

Second Edition. 478 pp. Price **2s. 6d.**

A SCHOOL HISTORY OF ENGLAND.

By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A.

"The book is clearly written and is not too full of details. The facts are lucidly expressed, and the maps and vocabulary of historical terms are exceedingly well done. We unhesitatingly recommend the book as admirably adapted for schools."—**The Educational News.**

A SHORT GEOGRAPHY. With the Commercial Highways of the World. **Twenty-Second Edition** (1904). Crown 8vo, 196 pp. ... ... **1s.**

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—**The Teachers' Aid.**

"Clearness and conciseness exemplified."—**The Private Schoolmaster.**

A SHORT HISTORY OF ENGLAND AND GREAT BRITAIN. B.C. 55 to A.D. 1890. **Seventeenth Edition.** Crown 8vo ... ... **1s.**

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with the usual emphasis, the Professor's expertness in the use and disposition of type."—**Education.**

A SHORT GRAMMAR OF THE ENGLISH TONGUE. With Three Hundred and Thirty Exercises. **Fifteenth Edition.** ... ... **1s.**

This little book is written in the clearest and simplest style for beginners.

ONE HUNDRED SHORT ESSAYS IN OUTLINE. By Professor MEIKLEJOHN. **Sixth Edition.** 110 pp. **1s.**

"This is undoubtedly one of the most useful books for pupil-teachers, Scholarship and Certificate students, ever produced."—**The Practical Teacher.**

A NEW SPELLING BOOK. With Side Lights from History. **Eleventh Edition.** Crown 8vo, 152 pp. ... **1s.**

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—**The School Guardian.**

A SHORT ARITHMETIC. By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. Crown 8vo, 196 pp. ... ... **1s.**
With Answers, **1s. 6d.**

"A book of well graduated examples, and just as much theory as will explain the methods of their solution."—**The Educational Times.**

A SCHOOL ALGEBRA FOR JUNIOR FORMS. By F. OSCAR LANE, B.Sc. Lond., Assistant Master, King Edward's School, Birmingham. Crown 8vo, 232 pp.... ... ... **1s. 6d.**
With Answers, 266 pp. **2s.**

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—**The University Correspondent.**

THE COMPARATIVE ATLAS. By J. G. BARTHOLOMEW, F.R.G.S., and edited by Professor MEIKLEJOHN. Containing 64 Plates and a General Index. **Second Edition.** ... **2s. 6d.**

"No atlas that we know at anything like the price gives so much so well."—**The Teachers' Monthly.**

THE ART OF WRITING ENGLISH. A Manual for Students. With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN, M.A. **Fourth Edition.** Crown 8vo, 340 pp. ... ... **2s. 6d.**

"'The Art of Writing English' teems with good advice."—**The Literary World.**

A NEW GRAMMAR OF THE ENGLISH TONGUE. With Chapter on Composition, Versification, Paraphrasing, and Punctuation. With Exercises and Examination Questions. **Twenty-First Edition.** Crown 8vo, 280 pp. ... **2s. 6d.**

"I gave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—**W. Johnstone, Esq., B.A., Elmfield College, York.**

THE LOCAL EXAMINATIONS, 1904

METHUEN'S JUNIOR SCHOOL BOOKS

Edited by OLIVER D. INSKIP, M.A., LL.D., Head Master of Framlingham College, and W. WILLIAMSON, B.A., F.R.S.L., Head Master of the West Kent Grammar School, Brockley.

Each volume is the work of a Master who has had considerable experience in teaching his subject; while special attention has been paid to the arrangement of the type and matter, which is as clear and concise as possible. The books contain numerous examination papers, and where the subject requires it are fully illustrated. In scholarship, in excellence of printing and lowness of price, this series will be found inferior to no other.

A CLASS BOOK OF DICTATION PASSAGES. By W. WILLIAMSON, B.A. Eighth Edition. Crown 8vo, 1s. 6d.

In use at over 300 Secondary Schools, a list of which will be sent on application.

THE GOSPEL ACCORDING TO ST. MATTHEW. Edited by E. WILTON SOUTH, M.A. With 3 Maps. Crown 8vo, 1s. 6d.

The notes are printed on the same page as the text to which they refer.

THE ACTS OF THE APOSTLES. Edited by A. E. RUBIE, M.A., Head Master of Eltham College. With 3 Maps. Crown 8vo, 2s.

A JUNIOR ENGLISH GRAMMAR. By W. WILLIAMSON, B.A. With numerous Passages for Parsing and Analysis, and a Chapter on Essay Writing. Crown 8vo, 2s.

A JUNIOR FRENCH GRAMMAR. By L. A. SORNET and M. J. ACATOS, Modern Language Masters at King Edward's School, Birmingham. Crown 8vo, 2s.

A JUNIOR CHEMISTRY. By E. A. TYLER, B.A., F.C.S., Science Master at Swansea Grammar School. With 73 Diagrams. Crown 8vo, 2s. 6d.

ELEMENTARY EXPERIMENTAL SCIENCE. Physics. By W. T. CLOUGH, A.R.C.S. **Chemistry.** By A. E. DUNSTAN, B.Sc., Assistant Masters at Owen's School, Islington. With 2 Plates and 154 Diagrams. Crown 8vo, 2s. 6d.

The treatment throughout is experimental, and the great majority of the diagrams have been specially drawn for the book—simplicity, clearness, and the avoidance of all unnecessary features being particularly aimed at.

All the questions set in the Cambridge Local Examination, December, 1903, in Elementary Experimental Science could have been answered from this book.

A JUNIOR GEOMETRY. By NOEL S. LYDON, Owen's School, Islington. With 239 Diagrams and numerous Exercises. 2s.

This is an elementary text-book carrying out the suggestions made in the Report of the Mathematical Association, 1902. It will be found suitable for Candidates preparing for the following Examinations:—Cambridge Preliminary and Junior Local, Oxford Preliminary and Junior Local, College of Preceptors, Cambridge Previous, Oxford Responsions, London Matriculation, Army and Navy Entrance, &c.

Please send for a list of Schools using this book.

JUNIOR EXAMINATION SERIES

Edited by A. M. M. STEDMAN, M.A. Fcap. 8vo, 1s. each.

This Series is intended for the use of Candidates preparing for the Local and College of Preceptors Examinations. Each volume contains 720 carefully graduated *original* questions divided into papers of ten questions each. The papers are so arranged that each may be marked with the same maximum number of marks. By this means the progress of the pupil can be easily ascertained. Specimens will be sent to Head Masters on receipt of Sixpence for each volume.

JUNIOR FRENCH EXAMINATION PAPERS IN MISCELLANEOUS GRAMMAR AND IDIOMS. By F. JACOB, M.A.

JUNIOR LATIN EXAMINATION PAPERS IN MISCELLANEOUS GRAMMAR AND IDIOMS. By C. G. BOTTING, B.A.

JUNIOR GREEK EXAMINATION PAPERS. By T. C. WEATHERHEAD, M.A.

JUNIOR GENERAL INFORMATION EXAMINATION PAPERS. By W. S. BEARD.

JUNIOR ENGLISH EXAMINATION PAPERS. By W. WILLIAMSON, B.A.

JUNIOR ARITHMETIC EXAMINATION PAPERS. By W. S. BEARD. With or without Answers. Contains 900 Questions.

JUNIOR ALGEBRA EXAMINATION PAPERS. By S. W. FINN, M.A., Head Master, Sandbach School. With or without Answers.

☞ *A Catalogue of Mr. Stedman's Latin, French, and Greek School Books, with specimen pages, will be sent post free on application. These books are used in many large Schools in forms preparing for the Local and College of Preceptors Examinations.*

THE STUDENT'S PRAYER BOOK. MORNING AND EVENING PRAYER AND LITANY. With Notes by W. H. FLECKER, M.A., D.C.L., Head Master of the Dean Close School, Cheltenham. Crown 8vo, 2s. 6d.

A SHORT HISTORY OF ROME. By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 3 Maps. Fourth Edition. Crown 8vo, 3s. 6d.

A COMMERCIAL GEOGRAPHY OF THE BRITISH EMPIRE. By Professor L. W. LYDE, M.A. Third Edition. Crown 8vo, 2s.

BRITISH COMMERCE AND COLONIES FROM ELIZABETH TO VICTORIA. By H. DE B. GIBBINS, Litt.D. Third Edition. Crown 8vo, 2s.

PRACTICAL CHEMISTRY. PART I. By W. FRENCH, M.A. With 57 Diagrams. Second Edition, Revised. Crown 8vo, 1s. 6d. PART II. By W. FRENCH, M.A., and T. H. BOARDMAN, M.A., Science Master at Christ's Hospital. Crown 8vo, 1s. 6d.

COMMERCIAL ARITHMETIC. By F. G. TAYLOR, M.A. Third Edition. 1s. 6d.

PRÉCIS WRITING AND OFFICE CORRESPONDENCE. By E. E. WHITFIELD, M.A. Second Edition. 2s.

THE PRINCIPLES OF BOOK-KEEPING BY DOUBLE ENTRY. By J. E. B. M'ALLEN, M.A. 2s.

OLD TESTAMENT HISTORY. For use in Schools. By W. F. BURNSIDE, M.A., Assistant Master at Cheltenham College. Crown 8vo, 3s. 6d.

This book has been written primarily for use in forms below the Sixth in Secondary Schools in the belief that it is possible to make the Old Testament a real living force in religious education.

LATIN HEXAMETER VERSE. An Aid to Composition. By S. E. WINBOLT, M.A. Crown 8vo, 3s. 6d. KEY, 5s. net.

A CLASS BOOK OF EASY DICTATION AND SPELLING. By W. WILLIAMSON, B.A. Second Edition. Fcap. 8vo, 1s.

FRENCH PROSE COMPOSITION. By R. R. N. BARON, M.A., With Vocabularies and Notes. Crown 8vo, 2s. 6d. KEY, 3s. 6d.

THE MAKERS OF EUROPE. By E. M. WILMOT-BUXTON. With 12 Maps and Plans. Second Edition. Crown 8vo, 3s. 6d.

GEOMETRY ON MODERN LINES. An Elementary Textbook by E. S. BOULTON, M.A., Lecturer on Mathematics at Merchant Venturers' Technical College, Bristol. Crown 8vo, 2s.

TECHNICAL ARITHMETIC AND GEOMETRY. By C. T. MILLIS, M.I.M.E., Principal of the Borough Polytechnic Institute. With Diagrams. Crown 8vo, 3s. 6d.

PRACTICAL MECHANICS. By SIDNEY H. WELLS. With 75 Illustrations and Diagrams. Second Edition. Crown 8vo, 3s. 6d. Contains all that is necessary for the London Matriculation Examination and the Elementary Course in Applied Mechanics of the Science and Art Department.

PRACTICAL PHYSICS. By H. STROUD, D.Sc., M.A., Professor of Physics in the Durham College of Science, Newcastle-on-Tyne. With 115 Diagrams. Crown 8vo, 3s. 6d.

CARPENTRY AND JOINERY. By F. C. WEBBER. With 176 Illustrations. Third Edition. Crown 8vo, 3s. 6d.

METHUEN & CO., 36 Essex Street, Strand, W.C.

A COURSE OF PRACTICAL PHYSICS FOR SCHOOLS. By C. J. L. WAGSTAFF, M.A., and G. C. BLOOMER, B.A., Science Masters at Bradford Grammar School.
First Year.—Mensuration, Mechanics, and Hydrostatics.
Second Year.—Sound, Light, and Heat.
Third Year.—Electricity and Magnetism. (*In January*).
Demy 4to, 1s. 6d. each.

These books are intended to stimulate a boy to think for himself rather than to allow him to cull facts in a mechanical manner from a detailed text-book. Under the teacher's supervision the boy is set to deduce his facts by actual experiment and to record those facts in the spaces provided in the book; and, judging from results, the method is to be considered eminently satisfactory. It gives at once scope to the teacher and individuality to the boy.

PLAYS FOR ENTERTAINMENTS. Three Merry Comedies for Schoolboys and Such. By C. A. PELLANUS. With Illustrations by F. C. K.
1. Too Clever by Half. 2. A Fresh Start. 3. The First Days of the Holidays.
These Plays have been well written by one who thoroughly understands the tastes and powers of boys. The humour is boy-like without being vulgar, and the staging is of the simplest nature.
8vo. Three Plays in 1 vol., 2s. 6d. Each Play separately, 1s.

Just Published. Crown 8vo, 6s.

THE BIBLICAL HISTORY OF THE HEBREWS. A Text-Book, based upon the lines of the Higher Criticism, designed for use in the Higher Forms in Schools and for Students generally. By F. J. FOAKES-JACKSON, B.D., Fellow of Jesus College, Cambridge; Hon. Canon of Peterborough.
Warmly welcomed by the majority of reviewers as a deeply interesting and scholarly book which, while acknowledging the value of the critical work of recent scholars, maintains an inspired origin for the Biblical narrative.

"HELPS BY THE WAY" SERIES. Written by S. STEWART STITT. Crown 8vo. 2s. net.
II.—Early Church History Analysed. Arranged in the form of Questions and Answers, with Synoptic Tables and Examination Questions.
Prospectus and full particulars on application to the Publishers.

Cambridge: W. HEFFER & SONS. London: SIMPKIN, MARSHALL, & CO.

WEISSE'S COMPLETE PRACTICAL GRAMMAR OF THE GERMAN LANGUAGE. With Exercises on Conversations, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Rewritten. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German grammar yet published in England."—*Journal of Education.*

WEISSE'S NEW CONVERSATIONAL EXERCISES IN GERMAN COMPOSITION. With complete Rules and Directions, with full references to his German Grammar. Third Edition, Revised. 12mo, cloth, 3s. 6d. KEY, 5s.

WEISSE'S ELEMENTS OF GERMAN. With a Course of Exercises instructing in simpler Composition. Second Edition. Cloth, 3s.

WEISSE'S A SHORT GUIDE TO GERMAN IDIOMS. Being a Collection of the Idioms most in use, with Examination Papers. Third Edition. Cloth, 2s.

APEL'S SHORT AND PRACTICAL GERMAN GRAMMAR FOR BEGINNERS. With Copious Examples and Exercises. Third Edition. 12mo, cloth, 2s. 6d.

CERF (A. J. W.) SHORT HISTORICAL GRAMMAR OF THE GERMAN LANGUAGE. Old, Middle, and Modern High German. By ALBERT J. W. CERF, M.A., First Senior Moderator and Large Gold Medallist in Modern Literature, Trinity College, Dublin. Part I. Introduction and Phonology. Crown 8vo, cloth, 4s.

"He has handled his materials skilfully and has produced a serviceable manual."—*Modern Languages.*

AHN'S GERMAN METHOD BY ROSE. A New Edition of the genuine Book, with a Supplement consisting of Models of Conjugations, a Table of all Regular Dissonant and Irregular Verbs, Rules on the Prepositions, &c. By A. V. ROSE. Two Courses in One Vol. Cloth, 3s. 6d. First Course, cloth, 2s.

This Edition has a valuable addition by Rose, which is copyright.

KEY to the Exercises. 12mo, sewed, 8d.

GERMAN LITERATURE AND READERS.

Edited for School use.

PHILLIPPS (V., B.A.) A SHORT SKETCH OF GERMAN LITERATURE. For Schools. By VIVIAN PHILLIPPS, B.A., Assistant Master at Fettes College, Edinburgh. Second Edition, Revised. Pott 8vo, cloth, 1s.

ULRICH'S GERMAN PROSE. With Notes on Syntax and Translation, followed by a Complete Vocabulary. By ANTON J. ULRICH, of Bradford College. Revised by JOHN GIBSON, M.A. Crown 8vo, cloth, 2s. 6d.

"A cheap and useful little volume."—*Journal of Education.*

"The selections for translation are admirable in every way."—*Educational Review.*

MOLLER (A.) A GERMAN READING BOOK. A Companion to Schlutter's German Class Book. New Edition, corrected to the official German spelling. With a complete Vocabulary. Crown 8vo, cloth, 2s.

APEL'S (M.) GERMAN PROSE STORIES FOR BEGINNERS. (Including Lessing's Prose Fables.) With an Interlinear Translation in the natural order of Construction. Second Edition. 12mo, cloth, 2s. 6d.

GERMAN CONVERSATIONS AND IDIOMS.

WILLIAMS (T. S.) MODERN GERMAN AND ENGLISH CONVERSATIONS AND ELEMENTARY PHRASES. The German Revised and Corrected by A. KOKEMÜLLER. Twenty-second enlarged and improved Edition. 12mo, cloth, 3s.

HEIN (G.) MANUAL OF GERMAN-ENGLISH CONVERSATIONS. 18mo, cloth, 1s.

A complete Educational Catalogue, containing a list of Books on the FRENCH LANGUAGE, Grammar, Exercises, Readers, Class-Books, Conversations, Correspondence, &c., post free upon application.

BLACKIE & SON'S LIST

Write for Complete Secondary School Catalogue

Hawkins' Geometry

Elementary Geometry of the Straight Line, Circle, and Plane Rectilineal Figures. *2s.*

By **CECIL HAWKINS, M.A.,**

Senior Mathematical Master at Haileybury College.

Contents: — Elementary Notions and Constructions; Intersecting Straight Lines; Triangle; Allied Triangles; Parallel Straight Lines; Parallelograms; Polygons, &c.; Configuration of Circle; Angles at Centre, Chords, Arcs; Angles at Circumference; Tangents; Examples, &c., &c.

Roberts' Geometry

For Beginners. Theoretical and Practical. *1s. 6d.* By **RAWDON ROBERTS, B.Sc.**

"A thoroughly good book, evidently written by a teacher of great experience. We commend it heartily, and shall be glad to know it has a great sale."

—***SCHOOLMASTER.***

"Undoubtedly the best elementary text-book on this subject." —***SECONDARY EDUCATION.***

Morgan's Geometry

Exercises in Theoretical and Practical Geometry. *1s.*

By **R. B. MORGAN, B.Litt.**

This excellent work (*just published*) has been produced in accordance with the requirements of the Cambridge Local Examinations (new schedules) and the Recommendations of the Committee of the Mathematical Association on Geometry.

Elementary Graphs

By **R. B. MORGAN, B.Litt.**

Crown 8vo, cloth, ***1s. 6d.*** ANSWERS, ***4d.*** net.

Mr. Morgan's book provides a short, clear, interesting introduction to the study of Graphs. It shows how Graphs may be employed in solving simple simultaneous and quadratic equations, and how the Graph corresponding to a given algebraic expression may be described, and *vice versa*. It may be used with any book on Algebra at present in use in schools.

The ***CAMBRIDGE REVIEW*** says:—"We can heartily recommend Mr. Morgan's little book. The exposition is clear, the printing good, and the plates at the end of the book admirable."

New Science Note Books

Blackie's Circle Series of Ruled Exercise Books for Science Classes. Each book contains 40 pp. fine cream-laid paper, carefully ruled, &c.

No. 1. Ruled in squares one-tenth of an inch, with page for notes. ***1d.*** This book may also be had in strong cloth covers. Book containing 80 pages, ***3d.***

No. 2. Ruled in centimetre squares. ***1d.***

No. 3. Ruled in quarter-inch squares. ***1d.***

No. 4. Ruled in millimetre squares. ***3d.***

Elementary Physics

Practical and Theoretical. By **Dr. JOHN G. KERR.** Illustrated. First Year's Course, ***1s. 6d.*** Second Year's Course, ***2s.***

[Part I.] "Dr. Kerr's book has much to commend it. . . . The pupil who carries out the experiments will be given knowledge which he is not likely to forget. Moreover, as the experiments are mostly quantitative, they offer a valuable course of training for the mind."

—***NATURE.***

The Warwick Shakespeare

General Editor—**Prof. C. H. HERFORD, Litt.D.**

THE WARWICK SHAKESPEARE is now in use in most of the leading Schools, Colleges, and Universities throughout the British Empire. Among others the following may be quoted:—Eton, Harrow, St. Paul's, Rugby, Charterhouse, Marlborough, Clifton, Rossall, Stonyhurst, Haileybury, Shrewsbury, Wellington, Bradfield, Girton, Newnham; University Colleges, &c.—Cardiff, Bristol, St. Andrews, Sydney, Otago, Cape Town, &c., &c., &c.

RICHARD THE SECOND. Edited by Prof. C. H. HERFORD, Litt.D. ***1s. 6d.***

"We have encountered few better works of the kind, and we heartily commend it on the score of common sense as well as of scholarship."—***SPEAKER.***

AS YOU LIKE IT. Edited by J. C. SMITH, M.A. ***1s. 6d.***

"Edited with great care and skill."—***JOURNAL OF EDUCATION.***

Oxford Manuals of English History

General Editor—**C. W. C. OMAN, M.A., F.S.A.**

I. **MAKING OF THE ENGLISH NATION** (55 B.C.–1135 A.D.). ***1s.***

"Mr. Robertson (the Editor) has caught the salient points of the story with uncommon skill. . . . The series promises to be of real value to those who are engaged in teaching English history in schools."—***SPEAKER.***

II. **KING AND BARONAGE** (A.D. 1135–1327). ***1s.***

"For its size this is undoubtedly the very best history of the period we have ever read, and we can strongly recommend its use in the upper forms of our public schools."—***GUARDIAN.***

III. **ENGLAND AND THE HUNDRED YEARS' WAR** (A.D. 1327–1485). ***1s.***

IV. **ENGLAND AND THE REFORMATION** (A.D. 1485–1603). ***1s.***

V. **KING AND PARLIAMENT** (A.D. 1603–1714). ***1s.***

VI. **THE MAKING OF THE BRITISH EMPIRE** (A.D. 1714–1832). ***1s.***

First Latin Course

A Latin Book for Beginners. Based on Conversation throughout.

By **E. H. SCOTT, B.A., and FRANK JONES, B.A.** ***1s. 6d.***

The ***SCHOOL WORLD*** says:—"This is quite the best book hitherto published for beginners, and we venture to prophesy that this, or others written on the same principle, will supersede all existing manuals."

First Latin Reader

By **R. A. A. BERESFORD, M.A.** With Sixty-seven Illustrations. *Third Edition.* ***1s. 6d.***

LITERARY WORLD.—"There are sixty-seven excellent illustrations: and these, together with large, bold type, are almost enough to persuade the small boy that Latin is play and not work. . . . Excellent reader in every way."

The ***JOURNAL OF EDUCATION.***—"Mr. Beresford's plan as a book has much to recommend it."

First Greek Reader

By **R. A. A. BERESFORD, M.A., and R. N. DOUGLAS, M.A.** Fully Illustrated. ***2s.***

The ***JOURNAL OF EDUCATION.***—"The volume, with its good print, strong binding, and numerous illustrations, is one that head masters will be glad to have. . . . We wish it the success that it merits."

The ***EDUCATIONAL TIMES.*** — "An unusually promising first book."

The Educational Times.

Rhetoric and Reason.

In the sphere of educational conflict the recurrence of the gracious season of peace and good will has been most opportune, and one would fain hope that its "sweet influences" may be pervasive and permanent. The "baleful controversy" over the Education Acts, sharpened by the approach of the London County Council election and by vague anticipations of a General Parliamentary Election, seemed to be losing sight of the prime object of "considering the children," and to be passing into a heated struggle for ballot-box superiority. If political force is to be the determining factor, the struggle may be prolonged through generations, each party alternately on top. Has party feeling risen so high as to preclude the hope that the leading combatants may even now proceed to disentangle the essentials from the accidents, to set calmly and clearly before them the true educational objective, and to devise practical means for its peaceful attainment? Neither passion nor force can be a remedy. And elsewhere in English-speaking countries there are examples of smooth-working arrangements in abundance.

The impetuous onslaughts of educationists, as well as of Churchmen and politicians, may well make us tender critics of attempts to observe the golden mean in other departments of human activity. Here is Prof. Perry again: he has been lecturing a public meeting at Oxford, under the auspices of two learned societies, on "Oxford and Science" (December 4). We hope we do no violence to the flowers of expression that we separate from their context. Thus: "The absence of scientific method is evident everywhere." The successful men—in the Church, in the Civil Service, in journalism, at the Bar, in boys' schools—"have no power to think for themselves in any subjects outside their narrow professional grooves." "It is very noticeable that the Oxford man has retreated from the Renaissance position, and has gone back to the Mediæval." "Why is there so little research of any kind in any subject going on in Oxford?" "There is too much of the draper's assistant style of work about your Boards and Committees." We are not surprised that the *Oxford Times* (from whose report we have quoted) tells Prof. Perry that "he clearly knows very little about Oxford," and counters point by point "the somewhat arrogant and sweeping indictment" of his "headlong" oratory. Since the event was to be, one may sympathize with Prof. Odling's wish "that the address had been given to Convocation." But perhaps it comes to much the same thing.

The other side, however, can play the same game—if, indeed, it has not bettered the instruction it has received. Prof. Ramsay, of Glasgow, a distinguished son of Oxford, is reported to have told the Classical Association of Scotland (December 5) that he "understood geometry was now to be studied on the easy and shoddy system, with the intellectual elements left out," and to have spoken of "youths who were being hurried on to raise a structure of shoddy science on a basis of shoddy mathematics." This deliverance, we are inclined to think, beats Prof. Perry's very farthest throw. Of course, Prof. Perry will point to Prof. Ramsay as a most shining proof of his thesis; but what we are immediately concerned about is the form and manner of disputation. Prof. Ramsay cannot be taken to be so appallingly ignorant as to make such statements in a literal sense: he is rather to be convicted of grievous indiscretion of forcible speech. The *Scotsman*, which is not always so conciliatory, remarks (December 15):

> What is urgently needed at the present day is a satisfactory course of education for those boys whose education stops short at the primary, or even the secondary, school stage, and to the solution of this problem the worst guides are those whose faith in classical training blinds them to the educational value of other subjects. . . . If Prof. Ramsay and those who think with him would recognize that in these days a classical education should be regarded as something of the nature of a luxury, and would rest content with specialization in this direction at a later age than has been the rule hitherto, the whole business of education would be more smoothly and profitably managed. As it is, the classical tradition is apt to be the curse of secondary education, and stands in the way of real progress in education.

But you cannot manage much less delicate and complicated matters either smoothly or profitably in the midst of a tempest of violent talk based on one-sided intelligence and narrow sympathy. How much more practical is the attitude displayed by Principal Sir Arthur Rücker in his recent address to the Modern Language Association!

If we pass to the sister island, we find Archbishop Walsh demanding "justice," and reiterating that "justice means equality." Meantime Prof. Tyrrell publishes an ill-timed

Digitized by Google

sonnet, acrid in tone and lop-sided in argument, and the Bishop of Limerick, whose "whole life has been spent amidst the inner workings of the Catholic Church amongst our people," declares as to one of the Professor's representations "that a more outrageously untrue or unfounded statement was never made"—that "it is an utter falsehood." Even in Wales the Bishop of St. Asaph has been impelled by the utterances of another bishop to "venture to put in a plea that, instead of being, so to speak, up in arms against those who differed from them, they would be at once wise and just in trying to probe to the very bottom any substantial and real grievance their friends might have, and in meeting their grievances as broad-minded Christians." Surely this is the better—the only helpful—counsel.

University College, London.

THE munificent and opportune gift of £50,000 to University College, London, is a most welcome sign of discerning and generous interest in the higher education of the Metropolis and in the advancement of English learning. The sum, it was announced, was "to be used by the Council of the College for the promotion of higher scientific education and research in that institution." Now we have too much confidence in the business capacity of the Council to raise any question as to their allocation of the money; but the question has been raised, apparently, within the gates of the College itself, and has challenged public comment in public prints. But first let us ask: What is "scientific education and research"? One would hope that the term "scientific" is not to be taken in the narrow and exclusive sense of natural and physical science; for, though these branches would no doubt readily absorb the money and cry for more, there is at least equal need for it in other branches of education and research that are no less "scientific." Let us recall the discriminating remark of the late Prof. W. Kingdon Clifford, one of the most distinguished of University College professors in the past generation:—

> Scientific thought does not mean thought about scientific subjects with long names: there are no scientific subjects. The subject of science is the human universe; that is to say, everything that is or has been or may be related to man.

The generous donor, as reported, says nothing about "scientific subjects"; he says, "scientific education and research." The habit of associating the term "scientific" with natural and physical subjects is naturally misleading. The final determination, however, will no doubt lie with the donor.

The really disquieting elements, however, appear in the report of an interview with Prof. Starling, through whom the gift was made (*Daily News*, December 5). Prof. Starling is said to have stated that the money "will in all probability be used towards bringing about the incorporation of University College with the University of London." Now what has this to do with "the promotion of higher scientific education and research"? The College has been promoting scientific education and research in all its departments during three-quarters of a century—with distinguished success too—without any assistance from the University of London, and (not to put too fine a point upon it) "only" as Mr. Bailey Saunders has properly pointed out (*Times*, December 2) "by the self-sacrificing efforts of the Professors and Lecturers"; and, though incorporation is expedient now, there is nothing on the surface to show that the work of the College will not proceed with its splendid efficiency even if incorporation do not take place, or, indeed, that its efficiency will be markedly advanced even if incorporation do take place. It is with the University, not with the College, that the gain will chiefly lie. However, Prof. Starling is reported to have said: "Until these two bodies, and others, join forces, instead of pulling in different directions, there will be little real advance in higher education in London." The forecast, we cannot but think, is extravagant, except, indeed, in respect of one of the College departments, where it is painfully true; but that department, strangely enough, is never thought of as engaged in "scientific education and research." The money, then, seems to be destined "to promote scientific education and research" by clearing away difficulties to incorporation, which does not clearly promise the College anything in particular, except possible indirect advantages of co-ordination and the University's presumably stronger influence to conciliate public support, once people see that it is in very fact a "teaching" University. The individual outlets for the money appear to have been particularized by Prof. Starling: he is made to say that the incorporation involves the removal of the Medical School and the formation of a clinical school at the Hospital, and the transference of the boys' day School to some new site in the North-Western district, and that "these two operations will absorb about £130,000 between them." We are not competent to divide the six figures between the two operations, but we have heard about one-half of the sum estimated as the cost of the latter. How the Hospital alterations could possibly involve £65,000 we entirely fail to conceive. As to the School, does it pay, whether in solid cash or by operation as a feeder of the College? If not, why not simply drop it, and save £65,000 at least? It does not seem to be any part of the duty of the College either to maintain the School at all or to provide secondary education for Hampstead, except there is profit in the undertaking. The whole question—unless Prof. Starling has been completely misrepresented—is of distinct public importance, and of very special importance to the College and to the University. We trust, however, that reassuring explanations will be made, and that Prof. Starling will soon be able to announce that he has received that other sum of £50,000 which is already in tolerably confident expectation.

NOTES.

Is there any conceivable end to the troubles of teachers? Probably not; for, when a member of an Education Committee objects to a candidate for a head mastership "because he possesses a University degree," one cannot but feel that the possibilities of disqualification are tolerably wide. It is Hornsey that is credited with the benefit of this singular objector's educational advice. Meantime, so far as yet appears, there may be comfort in reflecting that there is a world elsewhere for candidates with degrees. "Any consideration of the teachers of the London Board schools," says the *Morning Advertiser* (December 14), "compels respect for their

Digitized by Google

academic attainments." Our industrious contemporary produces the following statistics:—B.A., 123; B.Sc., 23; B.A. and B.Sc., 9; M.A., 23; M.A. and B.Sc., 1; D.Sc., 1; LL.B., 1; Mus.Bac., 3; L.L.A., 64; a Classical Tripos man; and 58 that have surmounted the London Matriculation. "Doubtless most of these men and women have worked hard after their day's work to obtain their degrees. Many of them have risen from homes of working men." Yes, and all the more credit to them for their aspirations and perseverance. In the three counties of Scotland where the best elementary education in the three kingdoms is given there is not, we believe, a single head master without his M.A.; nor need a candidate without a degree—and a good degree too—waste his time in applying. Evidently our educational museums are not yet complete.

A GOOD education and a strenuous and useful life—such are the foundations of success. So Lord Strathcona declared to the students of the City of London College, when he distributed the annual prizes (December 7); and Lord Strathcona, the Chancellor of two Universities and the architect of his own fortune, may well be believed. The intimate connexion between educational efficiency and commercial and industrial prosperity, and the special importance of such institutions as the City of London College for boys that leave school early for business, were most appropriate subjects of comment by the speaker—well worn subjects, no doubt, but ever needing fresh enforcement, particularly by an eminently successful captain of industry that has proved their value. We trust that Sir Edward Clarke will presently obtain the completing fraction of the £10,000 he wants in order to entitle the College to the grant of £15,000 from the Mitchell Trustees, and to enable the Governing Body (of which he is Chairman) to extend the work of the College. There ought to be virtue in Lord Strathcona's hint that the amount would soon be obtained "if only City men could be made to realize the good and useful work carried on at the College." It must seem very strange to Lord Strathcona that City men should be so slow to realize their duty in the matter.

IN discussing practical arrangements for the training of teachers in the ordinary secondary schools (in our September number) we wrote (page 376):

> Our own view is that in any case a fee should be paid, and that, when the student is attached to a particular master . . . the fee should be paid to that master."

This view has recommended itself elsewhere. The Professor of Education in Edinburgh University has proposed, and the Governors of George Heriot's Trust have agreed, that "an arrangement should be made whereby students for the secondary-school master's diploma should be permitted to receive a practical training in the teaching of mathematics and science in George Heriot's School for a term of ten weeks, eight hours per week." On the suggestion of the Head Master, the principal mathematical master has been appointed master of method. The Head Master will fix the days and hours of the students' attendance; and "the entire control of the students in the school" will, of course, be in the hands of the Head Master and the principal mathematical master. If Prof. Darroch choose to look in, no doubt he will be perfectly welcome—as a visitor. The whole of the remuneration goes to the principal mathematical master: £10 a year from the University, and a fee of £1 from each of the students.

ELSEWHERE we intimate a fresh step taken by the Assistant Masters' Association for the fuller discussion of educational questions of immediate importance, and we publish a letter on the subject from Mr. T. E. Page, their Chairman. There are special advantages in the informal treatment of such matters by way of preliminary test, and we cordially wish the best success to the new and enterprising attempt. Good advice, even when "wise, weighty, and well considered," and tendered by "those who have special experience or knowledge of the subject," is not always eagerly embraced and put into practice; but it is well that teachers should frankly express their views and leave the responsibility of acceptance or rejection with the administrative Authorities. At the same time we cannot doubt that the Authorities will gratefully welcome all suggestions based on knowledge and experience.

THE Technical Education Board will no doubt deal sympathetically with the elaborate results of the investigation into the requirements and facilities for the technical training of women in London conducted since last April by a special sub-Committee of the London County Council. The initial difficulties, which are fully recognized in the Committee's Report, are obviously—perhaps naturally—very serious; especially the difficulty of getting girls to give their minds to training of any kind. The influences of the elementary school ought to be continuously contributory to a more sober outlook on the future; and in the meantime the Committee do well to signalize the eminently liberal and helpful action of large and long-sighted employers, which, it is to be hoped, will be widely imitated. Not a few of the expedients suggested in the specific proposals of the Committee have already attracted the active interest of particular associations, whose experiences cannot but be useful in a large concerted scheme. A modest expectation of immediate results will be prudent; but the movement must eventually produce far-reaching effects on the social welfare.

THE suggestions of the Committee of Investigation into the Education and Training of Pupil-Teachers, appointed by the Board of Education in March last, have already been largely incorporated in the new regulations on the subject issued by the Board; but there is still "within the limits of those Regulations much room for variety of organization and for experiments by Local Education Authorities and others in the direction of establishing a new and improved pupil-teacher system." Accordingly the Board have issued a Circular with "Hints on the Organization of the Instruction of Pupil-Teachers," under ten heads, "mainly based upon the information gathered by the Committee," in the hope that they will be of service to the Authorities and others concerned. The question is both complicated and urgent, and the fullest and most accurate information is needed for a wise solution.

Digitized by Google

M. Charles Martin, Professeur de l'Université de France, writing from the French Department of the University of Glasgow, invites applications for assistant teacherships of English in certain French national secondary schools (*lycées*). The duties are "to give for two hours a day English *conversation* lessons to small groups of pupils"; and the equivalent offered is free board and lodging (separate room), with free attendance at any of the *lycée* classes. Candidates must have a good English pronunciation, of course, "but it is not necessary for them to be able to speak French." "They must be graduates of some British University, or possess some other academic recognition of their previous studies." We have already noted a similar interchange of teachers between American and French schools. It is obviously "an excellent opportunity offered to students and teachers to acquire a thorough knowledge of the French language, and to observe the methods in teaching the various subjects of the curriculum in France."

The rustication of three cadets at the Royal Military College, Sandhurst, for "cribbing" in examinations has led an inquiring interviewer to extract from "a well known Army coach" this information (*Daily News*, December 21):

At a "pass" examination "cribbing"—or the use of work which is not the candidate's own—has been a recognized thing among the men examined, and connived at by those above them. But a competitive examination is conducted on the strictest lines, and to use any aids would be held to be the act of a cad. Any candidate detected in "cribbing" in such an examination would be ruled out of the service. Thus, a candidate would obtain a lieutenant's commission after having honestly passed an examination, but in the examination for promotion to a captaincy he might "crib" without damage to his personal honour, the point being that a man must not use any advantage whereby another candidate would be injured.

The coach is reported to have added that "the manner in which candidates have been given to understand that some examinations were a mere farce is amusing—apart, of course, from the question of efficiency and national safety." The examples given are sufficiently disgusting. The cribbers are grievously to blame, no doubt; but surely the teachers, examiners, and other superior officers cognizant of such practices ought to have been rusticated first. But "even now," says another informant, "well acquainted with military examinations and the general accomplishments of candidates for the Army"—"even now, in spite of the admirable efforts of the present military staff, the educational and training parts of the Army have been disgracefully starved, and knowledge depreciated, by the Civil side." That is to say, the national resources, the national honour, and the lives of our soldiers are but playthings in the hands of some brainless officials. No doubt all this will be denied; but, if there be any truth in it, there must be a prompt ending to such intolerable proceedings.

SUMMARY OF THE MONTH.

At the meeting of the Standing Committee of the National Society (December 9) the following resolutions were adopted:—

1. The National Society, being firmly convinced that in the present condition of the education question the defence of Church schools is the paramount duty of those interested in religious education, and that the most serious present danger is isolated action on the part of single schools or localities, calls upon Churchmen to rally to the support of the Society; and, taking its stand upon the fair working of the Act of 1902, it further calls upon the managers of all Church schools to insist upon their rights under the law of the land and to turn a deaf ear to all proposals for compromise outside the law.

2. That the Secretary be instructed to make through the columns of the Press, and otherwise, an urgent and immediate appeal for a special fund to enable the Society to assist Church schools in the Principality of Wales in their present difficulties; and that the Finance Committee be authorized to act in co-operation with the Diocesan Associations in the temporary assistance of the managers of individual schools, and to make immediate advances of money if necessary to meet pressing needs, until the law can be enforced.

A conference was held (December 6) at the Westminster Palace Hotel between the Consultative Committee of the Board of Education and representatives of the following professional bodies:—General Council of Medical Education and Registration, Institute of Actuaries, Institute of Bankers, Institute of Chemistry, Institute of Civil Engineers, Institution of Electrical Engineers, Institution of Mechanical Engineers, Pharmaceutical Society, Royal Institute of British Architects, Society of Accountants and Auditors. A representative of the War Office and of the Civil Service Commission were also present. The subject of discussion was the desirability and feasibility of the introduction of a system of school-leaving certificates for England. Lord Londonderry attended for a few minutes, and Sir W. Hart Dyke subsequently took the chair.

The Board of Education has issued a circular to training colleges explaining the regulations to be applied to specially recommended students that intend to study for a third year in France or Germany. It is laid down that, as a rule, only one student be sent to the same place—a provision that tends to throw the student on his own linguistic resources. Paris and Jena are mentioned as examples of cases where the rule might be relaxed.

The twelfth annual general meeting of the Association of Principals and Lecturers in Training Colleges under Government Inspection was held in the Caxton Hall, Westminster, on December 18–19. The Rev. G. W. Garrod, Training College, Ripon, delivered an outspoken and practical presidential address. He declared that never in his experience had there been so critical a moment as the present, and that he believed "the history of training colleges for the next twenty years will be determined by what takes place during the next six months." He made five suggestions: (1) that the character and value of the work will be seriously imperilled if the colleges cease to be in direct contact with the Board of Education; (2) that generous financial treatment is necessary; (3) that a reasonable continuity of curriculum is indispensable; (4) that a special inspectorate should be re-established; and (5) that the Board of Education should take the colleges into their confidence and invite their co-operation.

The centenary of Herder was celebrated at Newnham College on December 9—in anticipation, for term ended on the 12th, and Johann Gottfried Herder died at Weimar on the 18th. Dr. Breul addressed an audience of some three hundred for a round hour on Herder, with special reference to his relation to England; and Newnham and Girton ladies recited and sang folk-songs of Herder's. There was also an exhibition of Herder portraits. The celebration was repeated in London on December 22, when Dr. Breul offered to the Modern Language Association suggestions for the expression of a practical interest in Herder, with a view to firing enthusiasm for the study of Herder's works and of German and comparative literature.

The Modern Language Association held its annual general meeting December 22–23, Principal Sir Arthur Rücker, President, in the chair. On the first day, after Dr. Breul's eloquent commemorative address on "Herder and England," M. Minssen, M.-ès-L., offered a "Causerie sur les Auxiliaires de la Conversation en Classe"; and Mr. G. G. Coulton, M.A., raised discussion on "Modern Languages and Modern Thought" and Mr. W. Mansfield Poole, M.A., on "French Grammar." On the second day Mr. Cloudesley S. H. Brereton, M.A., L.-ès-L., discussed "Some Difficulties in the Direct Method"; Miss Williams, President of the Guilde Internationale, presented an invitation to hold an Easter meeting in Paris, which was accepted by acclamation; and Prof. Sadler, who is President designate for 1904, delivered an able and interesting address on Herbert Spencer's educational ideas.

A NEW Classical Association for England and Wales was inaugurated at a meeting at University College, London (December 19). Sir Richard Henn Collins, Master of the Rolls, presided, and among the speakers to the resolutions proposed were the Vice-Chancellors of the Universities of Oxford and Cambridge, Sir Frederick Pollock, Prof. Postgate, Prof. Butcher, Prof. Sandys, Dr. Gow, Miss Penrose, Mrs. Strong, and other educationists. The objects are stated to be: to promote, develop, and maintain the study of the classics; to improve the methods of classical study; to encourage original investigation; to call attention to new discoveries bearing upon classical studies; and to promote intercourse between all lovers of classical learning. The Master of the Rolls is first President; Dr. Walter Leaf, Treasurer; Prof. Sonnenschein, Birmingham University, Secretary. 450 members have been enrolled.

MR. JOHN DILLON, M.P., speaking at the University Medical School annual dinner in Dublin (December 12), referred to a statement in a *Times* leader (December 9) that "there is no reason to apprehend that the difficulties of the Session will be increased by any meddling with Irish University education." "Well," he remarked, "if the Government imagine they can so easily throw aside this great question, I beg to say they will have a rude awakening." His own view he expressed thus:

I regard this University question as a question of the most vital interest to the people of Ireland, though I would not care for a University of Ireland much if it was not a University which threw its doors wide open by a system of correlated education to the children of the poorest on equal terms with the children of the rich. What we want in Ireland is, in the broadest sense, a democratic institution which will tap what I believe to be the richest mine that now exists in Ireland—namely, the brains of the people of Ireland—which will throw open wide to all our people the gates of knowledge, which will rear in this capital an institution really national; and I prefer that name to a Catholic institution. Let it be a national free University, and so long as Ireland is Catholic it will be Catholic by its nature, but let it be a national University above all. And what I look forward to in that institution is a University which will be characteristic of Ireland in its democracy, in its freedom to all the people, and its devotion to science, for which the Irish people have always been celebrated, and in these particular principles, peculiar in the world, that it will be a great scientific institution, and, at the same time, will be characteristic of Ireland in the record of uniting within its walls devotion to science in the broad and most unfettered freedom, combined with that devotion to the spiritual life which has been equally characteristic of Ireland. I trust that it will also be a great Celtic University, the centre of Celtic study throughout the world, a University to which foreign students will resort in order to learn the language, literature, and traditions of the greatest of the Celtic races.

PROF. G. G. RAMSAY (Glasgow), in his Presidential Address to the Annual General Meeting of the Classical Association of Scotland (December 5), in Glasgow University Buildings, said that classical men knew by experience what a splendid instrument for opening, expanding, stimulating, and furnishing the young mind could be forged out of wisely conducted classical study. Classical studies were eminently intellectual in themselves because they called into play from the very first those mental processes by which habits of observation, thought, and reasoning could gradually be formed, and because they introduced the young mind by methods suitable for youth to those large and simple conceptions upon which the whole fabric of human civilization rested. But, if the classics were to be used for purposes of education, to leave out the healthy wrestling with grammar and with dictionary was indeed to play "Hamlet" without the Prince of Denmark. Prof. Ramsay then passed on to consider the false notions (as he held them to be) gaining currency as to the great disciplinary study of mathematics. He was no mathematician himself, but he had never understood or used argument in his life without becoming conscious that the mental processes required to grasp the reasoning of Euclid's propositions supplied a standard of judgment applicable to every human circumstance. But now, he understood, geometry was to be studied on the easy and shoddy system, with the intellectual element left out. Euclid was too hard, his processes were too intellectual, for the youths who were being hurried on to raise a structure of shoddy science on a basis of shoddy mathematics. Why had the Germans cultivated science and technical education so successfully? There were three main reasons. The first was because they laid down as the foundation a basis of thoroughly sound general education; the second was because they had a few thoroughly equipped institutions in which science was taught as science in its highest developments; and the third reason, above all, was because their master-manufacturers were alive to the value of scientific guidance and advice for the conduct of their own business. If we were ever to have high-class technical education, it was the masters and manufacturers who needed to be educated into seeing the necessity for it, instead of calling out for protective tariffs to enable them to go on in their old rule-of-thumb ways and so be saved from the competition of their more expert rivals. Papers were afterwards read by Prof. Phillimore and Dr. J. G. Kerr.

AT the annual dinner of the Edinburgh Merchant Company (December 4) Principal Sir William Turner, in proposing the toast of "The Stock of Broom" (the emblem of the Company), suggested an arrangement for practical training of teachers by the University Professor of Education in the Company's schools. In reply, Mr. John Harrison, the Master, said:

With regard to Sir William Turner's suggestion that facilities should be given in the Company's schools for the training of teachers, the Company would be largely guided, as it ought to be, by the advice of its head masters. Sir William would perfectly understand that the Company meant to train up teachers in their different schools, but that they could not allow the teaching of teachers to interfere with the teaching of children who paid a fee for being taught. Sir William Turner's request would have the sympathetic attention of the Board. The Company was altogether at one with what had been said regarding the teaching of modern languages. But they wanted the Universities of Scotland to remember what ought to be the position of modern languages in their curriculum. The Universities did, to a certain extent, bar the modern languages from their proper position through the position assigned to them in the entrance examinations. He knew that he had the hearty sympathy of Sir William Turner and of the Senatus of the University of Edinburgh when he said that, if modern languages were to be taught as they ought to be taught in the secondary schools, they must have the assistance and the co-operation of the Universities of Scotland as a whole. The Merchant Company had for years been taking what they considered the proper steps for teaching modern languages, and they wanted the Universities to co-operate in that work, which was necessary and proper for the good of the United Kingdom and for the better education of its youth.

A similar arrangement for training University students in mathematics and science in George Heriot's School has been satisfactorily completed (December 14).

AT Mill Hill School (December 18) an excellent portrait of Dr. J. A. H. Murray, by Mr. F. S. Ogilvie, one of his "old boys," was unveiled by Mr. Bryce, M.P. "If Dr. Johnson knew that the great dictionary of our day was being conducted by a Scotsman and a Nonconformist, and that it was being brought out and published at the cost of the High Church University of Oxford," said Mr. Bryce, "he would think that times had changed indeed." Dr. McGrath, Provost of Queen's College, Oxford, attended on behalf of the Clarendon Press. The portrait represents Dr. Murray at work on the Dictionary. The new Scriptorium was also opened by Mr. Bryce. The old one, in which Dr. Murray first laboured on the Dictionary (after Mrs. Murray had very properly expelled it from the house)—an iron erection with a wooden interior—was left by Dr. Murray as a reading-room when he removed to Oxford, but was burnt down some time ago. The new building keeps the old name, and an inscription over the fireplace sets forth that it preserves the memory of the work done on that spot by Dr. Murray, whose name it bears. Dr. R. Garnett and the Rev. R. Harley also spoke. Dr. McClure presided on both occasions.

THE Westminster Play this year (December 11) was the "Trinummus" of Plautus. The performance was spirited throughout. The Westminster pronunciation of Latin was adopted "as being [according to the prologue] of ancient use in the school and habitual with many famous poets and scholars, whose ghosts annually revisit the Play." Turning to the events of the past year, the prologue also lamented the death of some prominent "Old Westminsters," and complained feelingly of the demolition of "Sutcliff's tuckshop" in Great College Street.

THE Technical Education Board of the London County Council has awarded (December 21) some three hundred junior county scholarships to boys and girls under thirteen years of age, most of whom are in attendance at public elementary schools. The scholarships carry free tuition at a secondary school for at least two years, together with maintenance grants averaging £10 a year.

THE Cardiff University Settlement, which is doing good work in the East Moors, appears to be thriving: indeed, according to the *South Wales Daily News* (December 12), it is "likely to become one of the greatest social forces in Cardiff." Its primary aim is social, to promote the education and instruction of, and the means of recreation and enjoyment for, and to inquire into the condition of, the people of the poorer districts of Cardiff and adjacent places; to promote on the footing of friendly social intercourse the acquaintance of the people with past and present members of the Welsh and other Universities, and other persons friendly to the objects of the Association; and to provide for the residence in such districts of persons engaged in, or connected with, philanthropic or educational work; and to consider and advance plans calculated to promote the general welfare of the people of the poorer districts of Cardiff and adjacent places.

TETTENHALL COLLEGE, Wolverhampton, is to be placed on a new footing. It was founded by Independents forty years ago in order to provide in "a Nonconformist atmosphere" a sound and liberal education; but it has paid no dividends for many years. Nearly two thousand shareholders have surrendered their shares to the trustees, and, as soon as possible, the present company will be dissolved and all its property vested in a new corporation to be registered by licence from the Board of Trade.

THE Admiralty is understood to be contemplating a considerable extension of the Naval College now building at Dartmouth, in view of the projected increase of naval cadets. It is also stated that it is intended, as soon as practicable, to establish a torpedo depôt at Dartmouth, the old "Britannia," when vacated by the cadets, being utilized as torpedo store ship.

THE School Nature-Study Union is intended, amongst other objects, to promote addresses on Nature to children, school rambles and journeys under qualified guidance, school museums, and reading circles for teachers. Sir George Kekewich is President; the Rev. Claude Hinscliff, Bobbing, Sittingbourne, Hon. Secretary; and Miss Kate M. Hall, Curator of the Stepney Borough Museum, Whitechapel, Hon. Treasurer.

THE British Child-Study Association, which recently held its ninth annual meeting, has had another successful year. Mr. W. A. S. Hewins, M.A., succeeds Dr. Kimmins as President; Mr. Mark H. Judge, A.R.I.B.A., is Treasurer; and Miss Kate Stevens is Hon. Secretary. The lectures during the year have been alike interesting and practical.

UNIVERSITIES.

(*From our own Correspondent.*)

Oxford. As the streets are almost deserted by the gown, save where here and there an anxious faced figure moves white-tied to the Examination Schools to face the ordeal of *viva*, one is almost tempted into believing that Oxford is nothing but an ordinary provincial town. As a rule, December is not an over-pleasant month here, even if the weather be dry; but the floods of the term have left a general and pervading influence of damp in the atmosphere, and, according to the doctors, a kind of rheumatic malaria, so most of those who are not tied down by establishments and perambulators in what the house-agents call "the residential quarter" have gone or are going in search of sunshine and dry roads.

They will come back next term refreshed and ready once more to plunge into the great Greek question. Most of us knew that it would be reopened soon, though some imagined that it would be preceded by a recrudescence of the "women's degree" struggle.

The Greek question now appears in a somewhat modified form: the Honour Mathematician and man of Science are the persons to be relieved. The proposal is no longer that they should give evidence before entering upon a University course that they are fit to get Honours in Mathematics or Science, for that appears on the face of it rather absurd. What more would this mean than anticipating in a delightfully problematic manner in Responsions the verdict of the Final Schools? Nay, more—it would have meant allowing a man to become a specialist by displaying part of his special wares.

As the proposal stands now the Honour man (Science and Mathematics) is to be exempt from Greek in Responsions, and in Pass Divinity by (1) showing a high degree of proficiency in a modern language in the former school and by taking some "substituted matter" in the latter. The bone of contention will be what is meant by the "high standard," and, if the standard is really high, whether the specialist will benefit, *i.e.*, benefit in the sense that his labours (outside his special department) will be lightened. Perhaps, again, it is impossible to legislate for the unfortunate or the idle; but the case of the man who has shown a "high degree" of proficiency in French in Responsions and afterwards fails to appear—for there are who do not appear—in the Final Honour List of Mathematics or Natural Science, seems likely to present a difficulty. Must he begin *de novo* and pass "Smalls" in Greek? Well, the second week of February will see the question debated and temporarily decided. Meantime the opposers are not idle and influential committees have been got together, the members including several distinguished teachers of mathematics and science.

During the term we have also held meetings to discuss "advanced studies"—so that the specialist and his claims have been well before the Oxford public.

Lord Goschen's Latin reply to the address of the Commission which went down to admit him as Chancellor of the University was recently published in the *Oxford Magazine*, and shows much of the elegance and facility which are so wanting in the majority of modern Latin speakers. After alluding gracefully to the great abilities of his predecessor, Lord Goschen continued: "Quarum rerum haud immemor, nescio an vires meae, senectute jam adveniente, sufficere possint ad honorem tam gravem, tam conspicuum sustinendum. Quinquaginta jam peracti sunt anni, amici carissimi, ex quo de Alma Matre nostra alumnus juvenis decessi. Mox a literis et philosophia ad negotia diversa, ad aerarii procurationem, ad rerum navalium administrationem, ad frequentes in Senatu conciones avocatus, raris tantum intervallis studiis illis amoenis vacavi quibus olim intra muros venerandos Academiae nostrae delectabar. Nihilominus, negotiis ejusmodi immersus plus semel consulentibus interfui qua ratione juventus nostra Britannica liberaliter educatione et doctrina esset instituenda, et quo modo, in praesenti tempore, antiqua studia cum scientiae luminibus melius conciliari possent."

During the month we have had several distinguished visitors from outside. Mr. Haldane was the chief speaker at a meeting on the great fiscal question, and there were free-trade lights and luminaries, University and civic, on the platform. Then the Ashmolean and Mathematical Society invited down the great Prof. Perry, who came apparently not to bless Universities—to wit, Oxford and Cambridge—and performed his mission with great self-satisfaction and a wealth of highly coloured epithets. We were informed *ex cathedra* that no one but men of science had a "wide outlook," and that observation and experiment were the only instruments of culture. Literature, old and new—but especially old—was banished into outer darkness. The classics had done nothing for Prof. Perry; *ergo, ergo, ergo.*

Even the *Oxford Times*, which only a few weeks ago had been moved to indignation by the Bishop of Stepney's deprecatory allusion to the much advertised "practical man" in matters of education, was stirred to revolt by Prof. Perry, and hastened to the defence of the Oxford curriculum.

We confess to being rather weary of these men of science. Let us have doctors and engineers and electricians who know their business, but save us from a world of men born amid formulæ, weaned in museums, and nurtured in laboratories.

The Craven Fellowship fell this year to Mr. John Jenkins, the newly elected Fellow of Magdalen, and grants were made from the Craven Fund to two other researchers, one of whom, Mr. E. O. Winstedt (of Juvenal fame), has since being elected to a Senior Demyship at Magdalen College, where, five years ago, he had obtained a classical scholarship from Magdalen College School.

Merton have been rearranging their teaching staff since the appointment of Mr. Bowman to the Wardenship, and have appointed two new tutors, Mr. H. W. Garrod and Mr. W. H. Fyfe. The Professor of Poetry is one of the Oxford professors who can count on a good audience, and there was considerable disappointment when, owing to ill-health, his lecture on "The Sublime" was postponed. However, he recovered sufficiently to come before the end of the term, and must have been gratified that, even at a time when every one is busy, the postponement had not decreased his audience. The appointment of Dr. McDougall, of Cambridge, to the recent Wilde Readership in Psychology has stirred up a rather acrimonious controversy, partly based on the fact that Dr. McDougall is pre-eminently an experimental psychologist, and experimental psychology is barred

Digitized by Google

by the terms of the statute creating the Readership; partly also by the old grievance that Oxford men are habitually passed over for Oxford posts in science. As a poet sings in the *Oxford Magazine*:

"We hold," said the others, the Free Trade folk, "the consumers are all who matter.
The more we devour the imported stuff the wiser we grow, and fatter.
If prices are low for the native crop, that leaves us more money, you see,
To spend on enticing the dumped produce from the generous Cam countrie."

Oxford did not figure preeminently in the Encyclopædia Class List, but that has not saved us from being inundated by a goodly proportion of the final telegraphic appeals to buy the supplementary volumes. Some of us have even succumbed to the miraculously importunate widow, and are wondering where to put the books when they come.

In matters athletic there have been the "Trials," which did not produce a good race nor show that we have any remarkable material for next term's crew. Our athletes defeated an unrepresentative L.A.C. team very easily, but "across country" we were, as anticipated, easily beaten by Cambridge.

Against this we may set the glorious victory at Queen's Club in the Rugby match, when at one and the same time we broke the Cambridge record and upset the prophets.

We are all very proud of R. E. Foster's achievements in Australia. To have made the highest score in the Inter-Varsity match, a double century against the Players, and the record score in a test match is a triple performance to which even Mr. C. B. Fry has not attained.

(*From our own Correspondent.*)

Cambridge.

THE proposal to appoint another Syndicate to consider the whole question of our examinations provoked little excitement, and no substantial opposition was forthcoming at this initial stage. When the Syndics have presented a report the plain members of the Senate will be allowed a voice, and—what is of more effect—a vote.

The Senate has adopted the proposal to create a new special examination in Geography, and also to continue the grant which enables the existing Readership to be maintained. The number of men qualified to teach the subject is very small; and after the first rush of men to pass what will be considered an easy test for a degree the subject is by no means unlikely to resume the back seat which it has occupied so long.

Prof. Howard Marsh, the new Head of the Surgical Department, has been earning golden opinions by his courtesy, geniality, and effective modes of teaching. He constitutes a remarkable exception to the dictum of the late Master of the Hall, that imported professors generally expect to come in duty free.

An excellent scheme has been started by Mr. Strangeways, of the Pathological Department, to organize a small special hospital in Cambridge for research purposes. Only one class of case will be taken at a time, and investigations into the nature of the disease will be made from the medical, physiological, and bacteriological points of view. A very small sum of money is needed, and the results would undoubtedly be very cheaply purchased, when so many skilled workers and research students are ready to give their services as a labour of love.

The Senate has offered to Lord Braybrooke an address congratulating him upon the approaching fiftieth anniversary of his appointment to the Mastership of Magdalene. In this case the complement is no empty one; there is not a Cambridge resident who would not cordially endorse every flattering word said by the Public Orator in the Senate House. A strong man of decided views, the Master may have had many opponents, but an enemy never. He has played the game and given an example to those who have to follow him.

We heard a great deal some year or so ago of the desirability of attracting University men to enter the Army, but the wishes of the Government have not yet taken a material form. Men have come to the University relying on the promises of a late War Minister, and now they are likely to fall between two stools, for, be it remembered, the conditions of University life and training are not specially adapted to the attainment of success in the examination served up to the present generation of Army candidates. "De moribundis nil nisi bonum." The condemnation of the old system surely implies the duty of creating a new one.

One leading defect of our University system is the difficulty of initiative on the part of private members of the Senate. The Council doubtless do their best to frame graces which embody the wishes of the majority; but it is absolutely impossible for any legislation to be brought forward, or for any amendment to be made, unless it first meets the approval of a majority of the Senate. Even in the elections, custom has decreed that two tickets shall be promulgated from some source unknown, and, like sheep, the plain members of the Senate flock in and vote according to printed lists. Among other topics the following may be suggested as fitting ones to occupy the attention of our rulers in the near future:

1. The state of the lodging-houses.—Some colleges, appreciating the difficulty, called in their external investments and proceeded to make further and better accommodation for their men: Sidney, Pembroke, Caius, Emmanuel, and Jesus have taken Time by the forelock. Some colleges, such as Clare and Trinity Hall, are precluded by the nature of their sites from doing much; but Trinity, Christ's, Queens', and St. John's have room enough and to spare.

2. The allotment of fees among the staff in certain departments.—This is a difficulty which cannot long be shirked. The question comes into practical politics somewhat in this way. A growing department is necessarily starved by a University which would do more if it had a longer purse; a competent and energetic head makes the department self-supporting or more, with the result that the virtual, as opposed to the official, income of the staff is a source of envy to outsiders. For a time the thing works beautifully, but it is not hard to imagine that at a particular crisis the system is one which requires a very delicate hand on the reins. Luckily the departments where the fee system prevails have been presided over by men in whom the University places absolute and unrestricted confidence—men who have borne the burden and heat of the day, risking adverse criticism, taking bold courses, and in every case obtaining success. But the difficulties will be in the future.

Our defeat by Oxford in the football field was a great disappointment. The Cambridge team, up to then unbeaten, came across a side of which every man was playing at the top of his game.

The politicians have not yet found a successor to Sir John Gorst: in fact, it is not known whether that gentleman will relinquish his seat without a struggle.

London.

THE University has issued an appeal for funds to enable it to undertake the "preliminary" scientific teaching (as distinct from the hospital work) of the London medical schools, which it is proposed to transfer and to centralize in an Institute of Medical Science under the control of the University.

The University has accepted an invitation from the Technical Education Board of the London County Council to inspect and report upon the provision for the teaching of modern languages in certain secondary schools in the county.

The annual report of King's College (December 17) records satisfactory progress in all the departments of the college and school, a high percentage of successes in the examinations of the University of London, which are acting as a great stimulus to the several faculties, and a general increase in numbers, the total number during the academical year being 5,821. The response to the appeal issued last year has largely reduced the debt, but £10,000 still remains to be cleared off.

Liverpool.

SIR EDWARD LAWRENCE presided (December 5) at the first meeting of Liverpool University Court. The ordinances framed for the government of the University were approved, and it was stated that the University (founded twenty-two years after the inception of University College, Liverpool) would start with property worth half a million sterling. £170,000 had been subscribed towards the University movement. An appeal was made for increased financial support.

Manchester.

THE new session opens with a larger number of students than the Victoria University ever had before. The matriculations of new students number 335 (240 at Manchester, and 95 at the Yorkshire College). The day students at Owens College in Arts, Science, and Law are 802 (586 men and 216 women), in Medicine 317 (of whom ten are women). The Vice-Chancellor, presiding at the University Court

Digitized by Google

(December 10), said the numbers showed no adverse effect from the recent changes in the constitution. Students from all parts of the world were engaged in original scientific research under professors of the University. Valuable work was being done by the Joint Board of Manchester and Liverpool Universities and the Yorkshire College. The new scheme of the Lancaster County Council with regard to the award of scholarships was one of the most useful forward steps recently taken.

A report from the Senate on the new Faculty of Theology, proposing that no external course of lectures should be approved unless given by a member of the teaching staff of some institution recognized for this purpose by the Court, was adopted.

A draft constitution of the Faculty of Commerce was adopted. Bachelors and Masters of Commerce are to be written as B.Com. and M.Com., and an advisory council is to be formed to act in co-operation with such bodies as the Manchester Chamber of Commerce.

On the motion of Prof. Tout, an advisory committee was appointed for University Extension work. Prof. Tout pointed out the importance of Extension work by a University like theirs, situated in the midst of a population of millions. He would be glad for suggestions from Yorkshire and from Liverpool as to the organization of such work.

Victoria—Yorkshire College.

At the annual meeting of the Board of Governors of the Yorkshire College (December 7), Lord Allerton presiding, the Marquis of Ripon was elected President. It was decided to purchase the Woodhouse Lodge estate (£5,000 to £6,000), adjoining the college and affording means of future extension. Only some minor points delay the grant of a charter, such as the formation of the Court and the composition of the Senate—and the name. ["The title 'University of Leeds,'" writes Mr. E. Basil Lupton (*Yorkshire Daily Post*, December 9), "seems to me simpler, free from objection, and in accordance with precedent"—an opinion that will have weight.] Donations amount to £36,000, but £100,000 is wanted. A resolution was passed authorizing the Council to make any alterations in the draft charter which might appear to them desirable, and to promote a Bill for the incorporation of Yorkshire College in the University when founded, and to take such steps as would tend to secure the foundation of a University for Yorkshire.

Glasgow.

Prof. Raleigh submitted to the University Court (December 17) a statement as to the need of an adequate and distinct provision for the teaching of the English language in the University. The arrangement whereby English Language and English Literature were committed to the charge of a single professor was no longer possible. The Court sympathized with Prof. Raleigh's views, and promised them the earliest consideration.

Prof. A. C. Bradley, Professor of Poetry at Oxford, formerly Professor of English Literature at Glasgow, was presented with his portrait, painted by Mr. George Henry, R.S.A., on behalf of the professors and students of Glasgow (December 17). Principal Story accepted the picture from Prof. Bradley as a gift to the University.

Aberdeen.

There is a general increase of 21 students this year—811 (662 men, 149 women) as against 790 (656 men, 134 women) last year. As regards the various faculties, there is an increase of 15 (all men) in Medicine and 18 (including 3 women) in Science, while there is a decrease of 9 in Arts, 1 in Divinity, and 2 in Law. The Arts figures are 374 (245 men, 129 women), as against 383 (266 men, 117 women) last year. "From these figures," says *Alma Mater* (the University magazine), "it will be observed that, compared with last year, there has been a total decrease of 21 in the number of men. This is certainly rather striking, but it is absolutely startling to learn that of the 115 first-year students almost exactly half are women, and that the number of men beginning their course this year is considerably less than that in the present Tertian class. It is difficult to explain the decrease in the number of men, for one would think that the Carnegie Benefaction would have caused an increase."

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, Bart.; GEORGE T. BIDDULPH, Esq.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, Bart.

Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,147,020. Annual Income, £400,381.
Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

MACMILLAN & CO.'S LIST.

New Works en Geometry te meet the New Requirements.

A SCHOOL GEOMETRY.

By H. S. HALL, M.A., and F. H. STEVENS, M.A. Globe 8vo. Parts I. and II. Part I.: LINES AND ANGLES, RECTILINEAL FIGURES. Part II.: AREAS OF RECTILINEAL FIGURES (containing the substance of Euclid, Book I.). 1s. 6d. Part III.: CIRCLES (containing the substance of Euclid, Book III., 1–34, and part of Book IV.). 1s. Parts I., II., and III., 2s. 6d. Part IV.: SQUARES AND RECTANGLES, GEOMETRICAL EQUIVALENTS OF CERTAIN ALGEBRAICAL FORMULÆ (containing the substance of Euclid, Book II. and Book III., Props. 35–37), sewed, 6d. Parts I.–IV., 3s. Part V., containing the substance of Euclid, Book VI., with additional Theorems and Examples, 1s. 6d. Parts I.–V., 4s. 6d.

*** This work is based upon the recommendations of the Mathematical Association.

JOURNAL OF EDUCATION.—"Seems quite the best of the new text-books of geometry that have lately been published. It is moderate in its changes, and excellent as to arrangement and selection."

A NEW GEOMETRY FOR SCHOOLS.

By S. BARNARD, M.A., Assistant Master at Rugby School, late Fellow and Lecturer at Emmanuel College, Cambridge; and J. M. CHILD, B.A. Cantab., Lecturer in Mathematics, Technical College, Derby. Globe 8vo, 4s. 6d. *** KEY (*in the Press*).

NATURE.—"There is no doubt that in this work of Messrs. Barnard and Child the teacher will find every requisite for the modern teaching of geometry, including a very large number of illustrative examples."

Ready immediately.

A NEW GEOMETRY FOR JUNIOR FORMS.

By S. BARNARD, M.A., and J. M. CHILD, B.A. (Cantab.). Globe 8vo, 2s. 6d.

*** This volume will contain all the practical and theoretical geometry required for a pass by Junior Candidates in the University Locals.

THEORETICAL GEOMETRY FOR BEGINNERS.

Parts I. and II. By C. H. ALLCOCK, Senior Mathematical Master at Eton. Globe 8vo, 1s. 6d. each. [Part III. *ready shortly.*

SCHOOL WORLD.—"To those teachers who prefer a modified Euclid to text-books which are frankly revolutionary this book will be very acceptable. Undoubtedly Mr. Allcock has succeeded in retaining the good features of the 'Elements,' while removing most of those which make Euclid's work most distasteful to the schoolboy."

CAMBRIDGE UNIVERSITY PRESS.

NOW READY.

ELEMENTARY GEOMETRY (Practical and Theoretical).

By C. GODFREY, M.A., Senior Mathematical Master at Winchester College; and
A. W. SIDDONS, M.A., Fellow of Jesus College, Cambridge, Assistant Master at Harrow School.

Large Crown 8vo, pages xii+356. Price **3s. 6d.**

Or in Two Volumes:—**Vol. I. (Experimental Course and Books I. and II.), 2s.; Vol. II. (Books III. and IV.), 2s.**

Answers to the Examples will be ready in January, 1904, *price* **4d.**, *post free. A Key is also in preparation.*

This book has been written especially with a view to the New Syllabus of Geometry adopted by the University of Cambridge. It will be found suitable in preparing for the following Examinations:—Cambridge Previous Examination ("Little-go"), Oxford Responsions ("Smalls"), Cambridge Local Examinations, Oxford Local Examinations, London Matriculation Examination, the Examinations of the College of Preceptors, the Examinations of the Civil Service Commission (Army and Navy Entrance Examination), &c.

A List of Books suitable for the Preliminary, Junior, and Senior Cambridge Local Examinations, 1904.

English.

The Elements of English Grammar. By A. S. WEST, M.A. 2s. 6d.

English Grammar for Beginners. By A. S. WEST, M.A. 1s.

Key to West's Elements of English Grammar and English Grammar for Beginners. By A. S. WEST, M.A. 3s. 6d. net.

Outlines of the History of the English Language. By T. N. TOLLER, M.A. 4s.

Scott.—Marmion. Edited, with Introduction, Notes, and Glossary, by J. HOWARD B. MASTERMAN, M.A. 2s. 6d. [*Preliminary and Juniors.*

Scott.—Kenilworth. Edited, with Introduction and Notes, by J. H. FLATHER, M.A. 2s. 6d. [*Juniors and Seniors.*

Lamb's Tales from Shakespeare: Tempest, As You Like It, Merchant of Venice, King Lear, Twelfth Night, Hamlet. With Introduction and Notes, by J. H. FLATHER, M.A. 1s. 6d. [*Preliminary.*

Shakespeare.—King Richard the Second. Edited by A. W. VERITY, M.A. Third Edition. 1s. 6d. [*Juniors and Seniors.*

Geography, Elementary Commercial. A Sketch of the Commodities and the Countries of the World. By H. R. MILL, D.Sc. New Edition, Enlarged. 1s. 6d.

An Atlas of Commercial Geography. By J. G. BARTHOLOMEW, F.R.G.S. With an Introduction by Dr. H. R. MILL. 3s.

A Short History of the Expansion of the British Empire. By W. H. WOODWARD, Christ Church, Oxford. Second Edition, Enlarged. With 10 Maps. Cloth, 4s.

An Outline History of the British Empire from 1500 to 1902. By the same Author. 1s. 6d. net.

French.

Dumas.—La fortune de d'Artagnan. Edited by A. R. ROPES, M.A. 2s. [*Juniors.*

Erckmann-Chatrian.—Madame Thérèse. By the same Editor. 3s. [*Juniors and Seniors.*

German.

Andersen, Eight Stories from. Edited, with Introduction and Notes, by WALTER RIPPMANN, M.A. 2s. 6d. [*Juniors.*

Kohlrausch.—Das Jahr 1813. Edited by J. W. CARTMELL, M.A. 2s. [*Seniors.*

Latin.

Caesar.—De Bello Gallico, Books IV. and V. Edited by A. G. PESKETT, M.A. 1s. 6d. [*Juniors.*

Caesar.—De Bello Gallico, Books IV. and V. Edited, with Vocabulary, by E. S. SHUCKBURGH, Litt.D. 1s. 6d. each. [*Juniors.*

Latin (*continued*).

Vergil.—Aeneid, Book I. Edited by A. SIDGWICK, M.A. 1s. 6d. [*Juniors and Seniors.*
Another Edition, by the same Editor, with Vocabulary. 1s. 6d.

The Story of the Kings of Rome. Edited by G. M. EDWARDS, M.A. 1s. 6d. [*Preliminary.*

Cicero.—Pro Lege Manilia. Edited, with Introduction and Notes, by J. C. NICOL, M.A. 1s. 6d. [*Seniors.*

Cicero.—Pro Archia Poeta. Edited by J. S. REID, Litt.D. Revised Edition. 2s. [*Seniors.*

Livy, Book VI Edited, with Introduction and Notes, by F. H. MARSHALL, B.A. 2s. 6d. [*Seniors.*

Greek.

Xenophon.—Anabasis, Book III. Edited, with Vocabulary, by G. M. EDWARDS, M.A. 1s. 6d. [*Juniors.*

Xenophon.—Anabasis, Book III. Edited by A. PRETOR, M.A. 2s. [*Juniors.*

Homer.—Odyssey, Book X. Edited, with Introduction, Notes, and Appendices, by G. M. EDWARDS, M.A. 2s. 6d. [*Seniors.*

Homer.—Odyssey, Book XI. Edited, with Introduction and Notes, by J. A. NAIRN, M.A., Fellow of Trinity College, Cambridge. 2s. [*Seniors.*

Plato.—Crito. With Introduction, Notes, and Appendix, by J. ADAM, Litt.D. 2s. 6d. [*Seniors.*

Plato.—Euthyphro. With Introduction and Notes, by the same Editor. 2s. 6d. [*Seniors.*

Sophocles.—Antigone. With a Commentary, abridged from the large edition of Sir RICHARD JEBB, by E. S. SHUCKBURGH, Litt.D. 4s. [*Seniors.*

Cambridge Bible for Schools.

The First Book of Kings. Edited by the Rev. J. R. LUMBY, D.D. 2s. net. Smaller Edition. 1s.

The Gospel according to St. Matthew. Edited by the Rev. A. CARR, M.A. 2s. net. Smaller Edition. 1s.

The Acts of the Apostles. Edited by the Rev. J. R. LUMBY, D.D. With 4 Maps. 3s. net. Smaller Edition. 1s.

The Epistles to the Thessalonians. Edited by the Rev. G. G. FINDLAY, D.D. 1s. 6d. net.

Revised Version.

School edition.

St. Matthew: The Revised Version. Edited, with Notes, for the use of Schools, by the Rev. A. CARR, M.A. With 3 Maps. 1s. 6d. net.

School World.—"The most approved results of recent Biblical criticism are embodied in the splendid notes; but, independent of its intrinsic value, there are three artistic maps incorporated in the text. An edition as remarkable for its elegance as for its high utility."

Greek Testament.

The Gospel according to St. Matthew in Greek. Edited by the Rev. A. CARR, M.A. 4s. 6d.

A LIST OF NEW AND STANDARD BOOKS FOR SCHOOLS WILL BE SENT ON APPLICATION.

London: C. J. CLAY & SONS, Cambridge University Press Warehouse, Ave Maria Lane.

The University Tutorial Series.

COLLEGE OF PRECEPTORS' EXAMINATIONS, 1904.

Caesar.—Gallic War, Books II., III. By A. H. Allcroft, M.A. Oxon., and W. F. Masom, M.A. Camb. and Lond., and others. 1s. 6d. each. Vocabulary, 1s. each. Translation, 1s. each. In One Vol., 3s. each.

Euripides.—Alcestis. By J. H. Haydon, M.A. Camb. and Lond. 1s. 6d. Translation, 1s. In One Vol., 2s. 6d.

Horace.—Odes, Book I. By A. H. Allcroft, M.A. Oxon., and B. J. Hayes, M.A. Camb. 1s. 6d. Vocabulary, 1s. Translation, 1s. In One Vol., 3s.

Vergil.—Aeneid, Book I. By A. H. Allcroft, M.A. Oxon., and W. F. Masom, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s. Translation, 1s. In One Vol., 3s.

CAMBRIDGE LOCAL EXAMINATIONS, 1904.

Cicero.—Pro Archia. By A. H. Allcroft, M.A. Oxon., and F. G. Plaistowe, M.A. Camb. 1s. 6d. Vocabulary, 1s. Translation, 1s. In One Vol., 3s.

Homer.—Odyssey, Books IX., X. By J. H. Haydon, M.A. Camb. and Lond., and A. H. Allcroft, M.A. Oxon. 2s. 6d.

Homer.—Odyssey, Books XI., XII. By J. H. Haydon, M.A. Camb. and Lond., and F. G. Plaistowe, M.A. Camb. and Lond. 2s. 6d.

Livy.—Book VI. By W. F. Masom, M.A. Camb. and Lond. 3s. 6d. Vocabulary, 1s. Translation, 2s. In One Vol., 5s. 6d.

Sophocles.—Antigone. By A. H. Allcroft, M.A., and B. J. Hayes, M.A. Camb. 2s. 6d. Vocabulary, 1s. Translation, 1s. 6d. In One Vol., 4s. 6d.

Vergil.—Aeneid, Book I. By A. H. Allcroft, M.A. Oxon., and W. F. Masom, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s. Translation, 1s. In One Vol., 3s.

English History, The Intermediate Text-Book of. Volume II., 1485 to 1603. By C. S. Fearenside, M.A. Oxon. 4s. 6d.

Spenser.—The Faerie Queene, Book I. By W. H. Hill, M.A. Lond. 2s. 6d.

THE SCHOOL JUNIOR SERIES.

Books suitable for the Oxford and Cambridge Junior Locals, and the College of Preceptors Second Class Certificates.

Arithmetic, The Junior.—Adapted from the *Tutorial Arithmetic.* By R. H. Chope, B.A., of Kingswood School, Bath. 2s. 6d.

"Will prove very suitable for students preparing for the Junior Locals and College of Preceptors' examinations."—*Practical Teacher.*

Bookkeeping, Junior (or **The Preceptors'**). By Thomas Chalice Jackson, B.A., LL.B. Lond. 1s. 6d.

"The book is an excellent one."—*Accountants' Magazine.*

French Course, Junior (or **The Preceptors'**). By Ernest Weekley, M.A. Camb. and Lond. *Second Edition.* 2s. 6d.

"This volume should well serve its purpose."—*School Guardian.*

French Reader, Junior (or **The Preceptors'**). With Notes and Vocabulary. By Ernest Weekley, M.A. 1s. 6d.

"A very useful reader with a good vocabulary and sensible notes."—*Schoolmaster.*

Geometry, Junior. By W. P. Workman, M.A., B.Sc. 2s. 6d. [*In preparation.*

Latin Course, Junior (or **The Preceptors'**). By B. J. Hayes, M.A. Camb. and Lond. *Second Edition.* 2s. 6d.

"A good practical guide. The principles are sound and the rules are clearly stated."—*Educational Times.*

Latin Reader, Junior (or **The Preceptors'**). By E. J. G. Forse, M.A. Camb. and Lond. 1s. 6d.

"We heartily commend the book."—*Secondary Education.*

Mechanics, Junior (or **The Preceptors'**). By Fabian Rosenberg, M.A. Camb., B.Sc. Lond. 2s. 6d.

"The book possesses all the usual characteristics and good qualities of its fellows."—*Schoolmaster.*

Trigonometry, Junior (or **The Preceptors'**). Edited by Wm. Briggs, LL.D., M.A., F.R.A.S. 2s. 6d.

"The book meets excellently the wants of the student reading for the College of Preceptors' examination."—*Guardian.*

Lists of Books suitable for Oxford and Cambridge Locals, and College of Preceptors' Second Class Certificates, London Matriculation New Regulations, &c., Post Free *on application.*

CURRENT EVENTS.

Fixtures.

The Half-yearly General Meeting of the members of the College will take place on Saturday, January 23.

* * *

Prof. Adams will deliver his second course of lectures (free to teachers) at University College, London, on January 16, 23, 30; February 6, 13, 20, 27; March 5, 12, 19. The subject will be "Temperament, Type, and Character in Education." Admission cards from the Professor, 5 Clement's Inn, W.C. Give full name and address, and name and address of the school in which the applicant teaches.

* * *

At Bedford College for Women, Prof. Patrick Geddes will commence a course of lectures on "Geography and the Natural Sciences," January 25, 5 p.m.

* * *

The Kearton Nature Photographs of Birds, Beasts, Reptiles, and Insects will be exhibited at the Modern Gallery, Bond Street, W., January 2–12, 10 a.m. till 9 p.m.; and Mr. R. Kearton, F.Z.S., will deliver limelight lectures to children each afternoon, and to adults each evening.

* * *

The Technical Education Board of the London County Council will hold a Conference of Teachers of Elementary and Secondary Schools and Technical Institutes at the South-Western Polytechnic, Manresa Road, Chelsea, on January 7–9, 11 to 1 and 2 to 4 p.m. The subjects will be the teaching of Geography, Modern Languages, Art (in secondary schools), and Geometry (practical work). Presidents: the Chairman of the Technical Education Board, the Hon Sir John Cockburn, the Hon. W. N. Bruce, Principal Sir Arthur Rücker, Sir Charles Holroyd, and Prof. Perry. Papers will be read by Mr. H. J. Mackinder, Dr. A. J. Herbertson, Dr. E. R. Edwards, Mr. F. B. Kirkman, Prof. Rippmann, and others. Two exhibitions, opened January 5 and continued during the week—one geographical, the other artistic (including drawings and painting from London secondary schools). Tickets (free) from Dr. Kimmins, 116 St. Martin's Lane.

* * *

A Joint Conference of Educational Associations will be held at the City of London School, the Right Hon. A. H. Dyke-Acland in the chair, on January 11 at 11.30 a.m.

The participating associations are the Association of Head Masters of Preparatory Schools; the College of Preceptors; the Head Masters' Conference; the Assistant Masters' Association, Incorporated; the Association of Assistant Mistresses, Incorporated; the Association of Head Mistresses, Incorporated; the National Union of Teachers; the Private Schools' Association, Incorporated; the Teachers' Guild of Great Britain and Ireland, Incorporated (with its allied societies, the Birmingham Teachers' Association and the Friends' Guild of Teachers). All interested in the discussions are invited. The Conference will discuss certain questions bearing on the unification of the educational system: (1), at 11.30 a.m., the ages at which it is desirable that transition from primary to secondary schools and from one type of secondary school to another should be made; (2), at 1 p.m., the extent to which the curriculum in one type of school should be correlated with that in other types; (3), at 3.30 p.m., the best method of discovering the child of scholarship form at the appropriate age for transition from primary to secondary schools; (4), at 5 p.m., the best method of adjusting the elementary pupil-teacher system to elementary schools. No resolutions. *Conversazione* (for

Digitized by Google

members of the associations) at Skinners' Hall, Dowgate Hill, in the evening. Cards of invitation from Joint Conference, 74 Gower Street, W.C.

* * *

THE Teachers' Guild will hold a conference in the same building on January 12–13, under the presidency of Sir Oliver Lodge, President, and Dr. S. H. Butcher, ex-President, of the Guild. Programmes on application. Members of the Joint Conference will be welcome.

* * *

THE Annual General Meeting of the Incorporated Association of Head Masters will be held at the Guildhall on January 12 and 13.

* * *

THE Annual General Meeting of the Incorporated Association of Assistant Masters in Secondary Schools will be held at Mercers' School, Holborn, E.C., on January 9.

"Social meetings for informal discussion" will be held on the third Thursday of each month, beginning on January 21, at 8.30 p.m., at the Bedford Head, Tottenham Court Road.

* * *

THE annual meeting of the Mathematical Association will be held at King's College, London, January 23, 2 p.m.

* * *

THE Women's Industrial Council will hold a conference "to consider the desirability of establishing schools for training girls of the industrial class in the care of children," in the Board Room of the London School Board, Victoria Embankment, on January 29, at 3.30 p.m, Mrs. Creighton in the chair. The Council hope that all institutions working to promote the welfare of women will send representatives.

* * *

SIR ROBERT B. FINLAY will deliver his Rectorial Address at Edinburgh University on January 21.

* * *

THE St. Bride Physical Training College for Ladies (Bride Lane, Fleet Street) commences courses on January 7. Special arrangements for teachers.

* * *

UNDER the auspices of several Greek educational societies recognized by the State, an Educational Congress will be held in April, 1904, at Athens. There will also be an exhibition of educational books and apparatus, which will include an international section. Foreign contributors should deliver their exhibits in Athens by February 14. Detailed information from the Secretary, M. G. Drossinis, 42 Rue de l'Académie, Athens.

Honours.

OXFORD UNIVERSITY has conferred the honorary degree of D.C.L. upon Mr. Henry Wilde, F.R.S., the founder of the Wilde Readership and of the John Locke Scholarship in Mental Philosophy; and the honorary degree of M.A. on Mr. John J. Manley, Curator of the Daubeny Laboratory, Balliol College.

* * *

THE University of Cambridge has conferred the honorary degree of D.Litt. on M. Théophile Homolle, Director of the French School at Athens.

* * *

MR. J. A. EWING, M.A., LL.D., F.R.S., late Professor of Mechanism and Applied Mechanics, Cambridge, and Mr. Karl Pearson, M.A., LL.B., F.R.S., Professor of Applied Mathematics in University College, London, and formerly Fellow, have been elected to honorary Fellowships at King's College, Cambridge.

* * *

SIR JOHN EVANS, K.C.B., has been elected an honorary Fellow of Brasenose College, Oxford.

* * *

THE Nobel Prizes have been awarded this year as follows:—Peace, Mr. W. R. Cremer, M.P.; Physics, divided between Prof. Antoine Henri Becquerel (Paris) and M. and Mme. Curie (Paris); Chemistry, Prof. Arrhenius (Stockholm); Medicine, Prof. Finsen (Copenhagen); Literature, M. Björnstjerne Björnsen (Christiania). Each prize is worth about £8,000.

* * *

M. OSIRIS, who in 1900 placed 100,000 fr. at the disposal of the Syndicate of the Paris Press as a prize for the most noteworthy scientific discovery, now suggests that the sum should be awarded to M. and Mme. Curie.

Endowments and Benefactions.

THE City of London College Extension Fund has received a donation of £150 from Lord Strathcona, in recognition of the "most valuable work" of the institution "in the interests of practical education."

* * *

THE offer of the trustees of the will of the late Rebecca Flower Squire to give £5,000 Consols to endow additional Law scholarships has been accepted by Cambridge University.

* * *

UNDER the will of the late Mr. Benjamin St John Attwood-Mathews, of Pontrilas Court, Hereford, and Llanvehangel Court, Monmouthshire, the original founder of the Alpine Club, £5,000 goes to the general funds of Cambridge University, and £5,000 to Trinity College, Cambridge.

* * *

THE Max Müller Memorial Fund (£2,400) is to be held in trust by the University of Oxford for the promotion of learning and research in the history, archæology, languages, literature, and religion of Ancient India.

* * *

MR. SHYAMAJI KRISHNAVARMA proposes to offer the University of Oxford £1,000 to found a Spencer Lectureship, in memory of Mr. Herbert Spencer.

* * *

A GENTLEMAN, who wishes to remain anonymous, has given, through Prof. Starling, the sum of £50,000 to University College, London, for the promotion of higher scientific education and research.

* * *

THE donor of the Denmark Hill site for the new buildings of King's College Hospital is the Hon. W. F. D. Smith, M.P., who is Chairman of the Removal Committee and Treasurer of King's College. The name of his father, the late Mr. W. H. Smith, M.P., who was for many years Treasurer of the Hospital, will be permanently associated with the central administrative block.

* * *

THE trustees and executors of the late Mr. S. R. Zunz have given £10,000 to the King's College Hospital Removal Fund, and "will probably see their way to make a further contribution towards the equipment and maintenance of the Annie Zunz Ward."

* * *

MR. GOSCOMBE JOHN, the sculptor of the Bala statue of the late Mr. Tom Ellis, M.P., has presented a plaster cast of it to University College, Aberystwyth. Mr. Ellis was one of the first students of the College, and he was subsequently a member of the College Court and Council and a Warden of the Guild of Graduates.

* * *

MR. H. HARRISON, of Blackburn, will contribute permanently £52. 10s. a year for instruction in Chinese in the Manchester University Faculty of Commerce.

* * *

PROF. WHITE, University College, Bangor, has been informed that the King intends to present to the College at an early date a stag from the Royal preserves. He has also

Digitized by Google

received for the zoological museum a considerable variety of important specimens from several donors, and £10 from Mr. H. R. Davies, Treborth.

* * *

THE late Mr. Seale-Hayne, M.P., has provided by will for the establishment of a college of science, art, and agriculture near Newton Abbot, especially for students from the county of Devon. It is thought that about £150,000 will be available. Mr. Seale-Hayne's fine collection of pictures may be hung in the gallery of the proposed college

* * *

MR. JUSTICE BUCKLEY has founded a scholarship in Political Economy at his old school, Merchant Taylors'—£50 a year for three years.

* * *

THE late Mr. Alfred L. Cohen, L.C.C., bequeathed £500 to the Jews' Free School; £100 to the Jews' Infant School, Commercial Street, Whitechapel; £500 to the Jews' College, Guilford Street; £50 to the Orphan Working School; as well as considerable sums to a number of hospitals and other charitable institutions.

* * *

THE *Matin* has placed 30,000 fr. at the disposal of Prof. d'Arsonval to enable him to continue his researches on the properties of radium.

Scholarships.

JESUS COLLEGE, Oxford, offers several scholarships (£80–£100) and exhibitions (£30–£60) in classics, mathematics, modern history, or natural science. No age limit. Examination begins January 12. Particulars from the Senior Tutor.

* * *

EXETER COLLEGE, Oxford, offers a scholarship in modern history (£60; age limit, 19); and an exhibition (£30; no age limit). Examination begins March 15. Particulars from the Rector.

* * *

MODERN Language Entrance Scholarships were recently offered at King's, Caius, Christ's, and St. John's Colleges, Cambridge. Unfortunately the supply of duly qualified candidates is still very small.

Appointments and Vacancies.

THE REV. CANON BELL, M.A., late Master of Marlborough, has been appointed Principal and Professor of Theology in Queen's College, London.

* * *

THE REV. W. E. COLLINS, M.A., Professor of Ecclesiastical History in King's College, London, has been appointed Bishop of Gibraltar.

* * *

SIR COURTENAY P. ILBERT, M.A., K.C.S.I., has been appointed Romanes Lecturer for 1904.

* * *

SIR JOHN SCOTT BURDON-SANDERSON, M.A., M.D., has resigned the Regius Professorship of Medicine in Oxford University. He was transferred from the Waynflete Chair of Physiology (of which he was the first occupant, 1883–95) on the resignation of the late Sir Henry Acland (1895).

* * *

PROF. PAUL VINOGRADOFF, of the University of Moscow, has been appointed Corpus Professor of Jurisprudence at Oxford. He is the author of an elaborate series of essays on "Villainage in England," published at the Clarendon Press in 1892.

* * *

MR. J. SHIELD NICHOLSON, D.Sc., Professor of Political Economy in Edinburgh University, has been appointed Gilbey Lecturer in the History and Economics of Agriculture in Cambridge University for three years (1904–06).

DR. HOBSON, F.R.S., has been appointed the first Stokes Lecturer, and Dr. Baker, F.R.S., the first Cayley Lecturer, at Cambridge.

* * *

SIR ARCHIBALD GEIKIE succeeds Sir Michael Foster in the office of Secretary of the Royal Society. The other Secretary is Prof. Larmor.

* * *

AT King's College, London, Mr. S. A. F. White, M.A., Demonstrator in Natural Philosophy, has been appointed Professor of Mathematics; Mr. E. F. Herroun, Assistant Professor of Physics; Mr. J. B. Dale, M.A., Assistant Professor of Mathematics; and Mr. C. A. Smith, Demonstrator in the Civil and Mechanical Engineering Department.

* * *

MR. H. J. MACKINDER, M.A., has been appointed Director of the London School of Economics and Political Science, in succession to Prof. Hewins.

* * *

MR. R. H. YAPP, M.A, of the Botanical Laboratory, Cambridge, has been appointed Professor of Botany in University College, Aberystwyth. For the last two years Prof. Yapp has been one of the Secretaries to the Botanical Section of the British Association.

* * *

THE Chancellorship of the University of Glasgow is vacant by the death of the Earl of Stair. Lord Kelvin is said to be his probable successor.

* * *

MR. J. H. DOBSON, of Crewe, has been appointed assistant to the Chief Organizer and Director of Higher Technical Education in the new University of the Transvaal.

* * *

MISS MARGARET A. GILLILAND, M.A. (Lond.), Senior English Mistress at the Clapham High School (Girls' Public Day School Company), has been elected by the Haberdashers' Company Head Mistress of Aske's School for Girls, Acton.

* * *

MR. HERBERT TOMLINSON, F.R.S., has resigned the Principalship of the South-Western Polytechnic, Chelsea.

* * *

MISS F. LOVIBOND, of Bedford College for Women, lately Sanitary Inspector at Rochdale, has been appointed Woman Sanitary Inspector to the Borough of Holborn.

Literary Items.

MR. JAMES J. GUTHRIE, of the Old Bourne and Pear Tree Presses, and Editor of *Books and Plates* (quarterly), has established the Harting School (L. & S.W. Railway, Midhurst branch), to give workshop training in artistic printing.

* * *

MESSRS. LONGMANS announce as nearly ready a final volume of Dr. Bright's "History of England," covering the Victorian period, and Book I. of Prof. Tout's "First Book of British History"; also a work on "Educational Theory viewed in the light of Contemporary Thought," by Prof. M. V. O'Shea, of Wisconsin, and "An Apology for certain Methods of English Higher Education," by T. Pellatt.

* * *

MESSRS. GINN & CO. announce another volume by William J. Long, the most sympathetic and charming of present writers on animal life—"A Little Brother to the Bear, and other Animal Studies."

* * *

MR. BRIMLEY JOHNSON is publishing "Thoughts on Judaism," by Lily H. Montagu, "a wholly personal aspect of convinced religious thought and emotion," in sympathy with the liberal movement.

Digitized by Google

Mr. H. Thiselton Mark is devoting all the profits of his work "The Teacher and the Child" (which we noticed last January) to the funds of the Congregational School at Caterham. Three editions appeared in England and one in America (Fisher Unwin).

* * *

Mr. Fisher Unwin publishes an "autumn season" M.A.B. (which, being interpreted, is "Mainly about Books"), with interesting articles and numerous good portraits of authors, at the nominal charge of one penny.

* * *

Messrs. Jack will commence the issue of the Old Testament portion of the "Century Bible" with "Genesis," by Prof. Bennett, New College, London, in January. "Judges and Ruth," by the Rev. G. W. Thatcher, B.D., Mansfield College, Oxford, will follow in February; and other volumes monthly.

* * *

The reports of the Mosely Commission will be published about Easter.

* * *

The *Record* for October is packed full of interesting matter, with many good illustrations. Special attention may be drawn to "a general review of the problem" of the training of teachers, the importance and urgency of which are emphasized.

General.

Mr. J. W. Welsford, of Harrow School, warned by the disastrous Eton fire, has set up a complete automatic fire alarm installation in his house.

* * *

Mr. T. King, C.B., late Senior Chief Inspector of Schools, we regret to record, has not long survived his Birthday honour. He has succumbed to influenza.

* * *

Dr. Kasasis, Professor of Jurisprudence and Rector of the University of Athens, was entertained at dinner by a large and distinguished company of friends and former students at the Criterion (December 18).

* * *

Under the auspices of the Modern Language Association, Sir Hubert Jerningham delivered (in French) an eloquent appreciation of Alexandre Dumas *père* at Queen's College, London (December 12). The French Ambassador was present.

* * *

The Albert Fry Memorial at University College, Bristol, is to take the form of "a tower and buildings"—"a handsome completion of the buildings as they now stand." The fund amounts to £1,835.

* * *

The Conference on the Training of Teachers, at Manchester (November 23), was much divided in opinion, and passed no resolution.

A MARLBOROUGH CHALLENGE TROPHY.

In our September number (page 387) we briefly referred to Mr. Bell's parting gift to Marlborough. We now have pleasure in quoting the following account of it from our bright contemporary, the *Captain*, which also reproduces a fine photograph of the trophy:—

"In recent years many challenge cups and other prizes have been given by liberal Marlburians and other friends for the encouragement of cricket, football, hockey, and other kinds of athletic exercise. There is a keen competition among the Houses for these prizes, especially for the Pollock Shield, given by the present Head Master of Wellington College, to be held by the House which is most successful in the sports of the year. The marks for these are so arranged that the younger members of a House may help to win the Shield for it. The result is wholesome, as, besides encouraging athletics, such prizes help to diffuse widely a generous feeling of public spirit and loyalty to the Houses. On the other hand, they have increased the tendency to regard excellence in athletics as the chief interest in schoolboy life, and the brainwork as a matter of secondary importance.

"Prizes given on the usual lines for school work, while useful to encourage and reward industry, yet have their defects: they stimulate only individual boys, and may beget in them an unwholesome hunger for marks; the honour of the prize affects only the winner, and the competition for it tends to foster a type of character which does not command the admiration and sympathy of companions. Some of these defects might be remedied if into the competition for school prizes we could infuse some of that generous, unselfish public spirit which produces admirable results in some games, athletic exercises, &c. Such were the feelings which led the late Head Master of Marlborough to offer, as a parting gift to the school, a prize which will be awarded each year just before Prize Day to the House which has gained most distinction in the work of the twelve months preceding; 'its merit to be estimated by a scale of marks assigned to the different prizes, scholarships, &c., on the analogy of the mark-scale of the Pollock Shield Competition.'

"The prize is a bronze statuette, representing St. Michael, designed by Mr. E. Roscoe Mullins, O.M. The plinth will bear small shields to receive each year the name of the winning House."

OPEN COURT.

Thay say . . .
Quhat say thay?—Lat thame say!

LEAVING CERTIFICATES.

By J. L. Holland, B.A., St. Olave's Grammar School.

The Board of Education is following the recommendations of the Commission of 1895 so closely that an inquirer anxious to know what the next step will be in the administration of secondary education might confidently look to find it in the Commission's Report. As was pointed out in the August issue, the Registration Order was a signal proof of this, and we have now another to instance in the reference to the Consultative Committee of "Standards of Examination, particularly in reference to boys destined for certain professions." That Body is clearly not to be the *nominis umbra* which some people prophesied a short year ago; "after taking the advice of the Consultative Committee" is a formula that we are probably destined to hear on many important occasions in the future.

The reference quoted may safely be interpreted to mean "leaving certificates." These, indeed, we are likely to find, are no further off than the Committee's Report. The University of London is already in the field; and, a fact more significant still, the Military Education Division of the War Office has forestalled the Committee's judgment in one direction by recommending that the possession of a leaving certificate granted after a certain minimum attendance (apparently three years) at a properly inspected school be a necessary qualification for entrance to Sandhurst and Woolwich.

The secondary teacher, distracted as he is by the sixteen—or is it seventeen?—professional entrance examinations, will incline to utter a benediction over any change. But before we elect for a uniform leaving examination it will be well to make sure that we are not driving out ill with worse. The advocates of such uniformity can hardly discern much to encourage them in some of the results of the system on the other side of the Border. After fifteen years' experience in Scotland the mischievous rivalry between school and school for points in the contest is still in full swing, with the consequent over-pressure of the immature and ill-prepared candidates who are forced into the lists. "Inquiries show that under existing circumstances it is no uncommon thing for boys, and even for girls, to spend five

Digitized by Google

or six hours nightly on home lessons"—such is the testimony of Sir Henry Craik.

The truth of the matter is that, so long as examinations are merely written tests imposed upon the schools from without, they will be attended by a train of necessary evils, many of which will be intensified by any standardization which advisory committees may attempt. Education, as no one but the teacher seems nowadays to remember—and he is often tempted to forget—begins when child and teacher come face to face: syllabuses, curricula, time-tables, are external things—expedients sometimes, but often impediments.

Now, this contact of teacher and taught is injured by the current examination system in three ways, at least. First, it affects adversely the spirit in which the joint task is carried through. From this point of view, Mr. Warde Fowler in the *Times* the other day advocated the abolition of Moderations at Oxford. "It is my firm conviction," he said, "that so long as it exists the undergraduate will never shake himself free of the idea that at school has silently taken possession of his mind—that education and learning both mean preparation for an examination." These undergraduates are, many of them, the flower of our secondary schools; could there be a more damning verdict upon the liberal education we have given them? Secondly, the examinations affect the manner of the teaching. Facility in writing answers is all-important; and, therefore, as soon as anything has been learnt, the pupil is set to reproduce it. The result sometimes tempts one to doubt Bacon's maxim that "Writing maketh an exact man"; of that other maxim, "Reading maketh a full man," we permit ourselves but little experience. Finally, the system affects the matter of instruction. The outlook upon a subject may be compared to the field of vision: there is a clearly defined central portion surrounded by a marginal area. The centre of the subject is the part which any decent text-book will supply, and which all examinees may fairly be expected to know. But in the margin the teacher is at home; here is the source of his own interest; and here his personality has free play. The external examiner, careful to avoid obloquy, must shape his questions to the beaten paths; and teacher and pupils, diligently plodding in his wake, feel any departure therefrom is sheer truancy.

It is at present the fashion to find a cure for these ills in a combination of examination and inspection. But, though experienced and sympathetic inspection is of the very greatest service, it remains true that the power of an external authority that both examines and inspects is well nigh irresistible. "Every school in Scotland is under our influence," said Sir Henry Craik to the Commissioners of 1895, "and we would simply set an iron rule upon them as to what they were to teach, and there would no possibility of getting beyond that." If the diagnosis be correct, the remedy must be sought in measures that will restore to the teacher his due responsibility for aims and methods—a responsibility of which many forces now let loose upon education, besides external examinations, are tending to deprive him. In Mark Pattison's phrase, the examinations must follow the schools, and not the schools the examinations. With this touchstone we could wish all schemes for new certificates to be tried.

But what changes can be proposed which will mitigate the evils we have indicated as lying at the root of the examination system, which will give back to the teacher his due responsibility, and will at the same time be practicable under the new conditions likely to obtain in education? We will venture to make four suggestions not new in themselves—which seem to be worth consideration in the discussions now going forward; suggestions, moreover, which could easily be put into practice by the present Inspecting and Examining Bodies.

First: the actual examination should be put in its proper subordinate position. The candidate for a leaving certificate should be required to produce a record showing that he had undergone a satisfactory course of study and that at no point in that course had he sunk below a certain level of performance as attested by the results of the internal examinations of the school. Further, the present perfunctory certificate of good character should be replaced by a careful report drawn up in concert by the teachers responsible for his instruction.

Second: the conception of a uniform examination, in the sense that all candidates everywhere take the same paper in a subject, should be abandoned. The papers should vary from school to school, according to the approved syllabuses of the teachers. Uniformity of standard it would be the business of the inspectors to secure in discussing the teacher's syllabus with him. Moreover, the inspectors, if they do not themselves actually set the examination papers, should, at any rate, be active members of the Board of Examiners constituted for any school within their province. In this way the teaching would lead up to the examination naturally, and without demanding of the teacher an unreasonable sacrifice of his own ideas.

Third: it is essential that the school staff should have a clearly defined status in relation to the examination. The papers by which they had from time to time tested the progress of the candidates might be submitted to the Examination Board; or each teacher might be allowed to send in one or two model papers as an indication of his method of treatment. The Board might also have among its members a teacher appointed to represent the staff of the school, through whom it would be possible to appeal against the paper set in any subject to a Central Board of Moderators, constituted from examiners, inspectors, and teachers. In cases where such an appeal was upheld, the moderators ought to be empowered to take any steps they might think desirable, even to the extent of directing that the certificate should be issued without regard to the result of the particular test to which objection had been successfully taken.

Fourth: the certificate should be granted jointly by the examining and inspecting body and by the school. The three requirements—an adequate course of study, a recommendation from the teachers concerned, and a satisfactory examination—should be clearly stated upon the face of the certificate, which should not be granted unless all three were satisfied.

Since the passing of the Education Act of last year, the work of the Board of Education and of the Local Authorities in laying down the lines of future administration has been going on with great rapidity. The powers without are organized and organizing; but the teachers within are still, for the most part, a disunited array. Opportunities of formulating collective opinion upon such professional questions as we have here discussed are few, and advantage is not always taken of those which exist or arise. Such an opportunity the present issue provides,

> **And we must take the current when it serves,**
> **Or lose our ventures.**

THE DIPLOMA EXAMINATIONS.

The Revised Regulations.

By Gilbert J. Pass, Craufurd College, Maidenhead.

The readers of the *Educational Times* who are interested in the Diploma Examinations will see with satisfaction that, as a result of the correspondence started last March, the Council has amended the regulations.

In the first place, the date of the practical examination has been changed. Instead of being held only in July, it will in future take place in February, May, and October. This will naturally be a considerable convenience to many teachers who have hitherto found it difficult to secure a day in term time to go up for the examination.

Another boon is conferred by changing the date of the Diploma Examination from July to the first week in September; for teachers will then have the double advantage of having had the

Digitized by Google

summer holidays for reading and of taking the examination during the vacation.

It is, however, in the alteration of subjects that one feels somewhat disappointed. English has been introduced, but only as a *subject*, not as a *branch*. Surely this is inadequate. In a subject such as English, which embraces so many sections—history of the language, literature, Anglo-Saxon, &c.—enough material could certainly be found to form a whole branch, especially when one considers the important position held by English in many degree examinations at British Universities.

Though English has been inadequately employed in these examinations, its treatment is nothing compared to that meted out to History, which is still only used as a preliminary test.

But such a comprehensive subject as history, European and Constitutional, is surely deserving of better recognition; and one would imagine that here, indeed, was scope for examiners to introduce a further branch. Apparently, however, the Council thinks otherwise, and, unhappily, history has thus not been accorded even the degree of recognition given to English. Therefore one may maintain that the defects of the examinations which have previously been pointed out still remain. For instance, presuming a teacher has only an elementary knowledge of science, mathematics, and classics, it is impossible for him, without a considerable amount of private study, for which he might be unable to find time, to obtain a higher diploma, even though he may be very fairly equipped in modern languages, English, and history.

Should, however, English and history be given the place in these examinations which from their importance they deserve, then hundreds of teachers throughout the country would be able to avail themselves of the advantages of the higher diplomas of the College. Presumably the objects for which the College of Preceptors holds these examinations are (1) to promote general efficiency; (2) to enable teachers who have not University degrees to obtain official recognition; (3) to encourage specialization. If the College is to carry out this programme, it ought to introduce a *maximum* number of optional subjects, so as to enable a *maximum* number of candidates to enter for the examinations.

One owes a word of gratitude to the College Council for the alterations already made; but, since gratitude is a lively sense of favours to come, our thanks are given in the hopes that further amendments will be introduced, and the examinations will thereby become of still greater utility to teachers.

MR. HERBERT SPENCER.

Mr. Herbert Spencer died at Brighton on December 8 at the age of eighty-three. The son of a Derby schoolmaster, he became an assistant teacher, turned to railway engineering at seventeen, and then passed into journalism, being sub-editor of the *Economist* 1848–53. For the past half century his history has been the well known history of his books. His treatise on "Education" (which was brilliantly discussed by Prof. Sadler at the School of Economics on December 23), though containing not a few important points of very disputable character, has been widely influential, and the sixpenny edition recently issued by the Rationalist Press Association is reported in a "third impression (completing 60,000 copies)."

Mr. Leonard Courtney's Eulogy.

Mr. Leonard Courtney, M.P., delivered a brief address at Golder's Green Crematorium just before the remains were cremated (December 12). He said:

The first thought of every one musing over the life of Spencer must be that of admiration for the vastness of the work he planned for himself, and of gratitude, and even joy, that he lived to see his self-ordained task completed. A delicacy of constitution, of which, having regard to his long years, Spencer himself was perhaps too sensible, threatened to interfere with, if not to arrest altogether, the progress of his work. The support he received was inadequate to meet the charges of his undertaking, and his means were being consumed at a rate which would soon exhaust them. This second hindrance was more easily set aside than the first. A circular intimating that the work must be suspended quickly brought a sufficiency of help. Indifferent health proved a more lasting difficulty; he was reduced to working very few hours a day, and sometimes to abstaining altogether from work for considerable intervals. The wonder is that, with the moderate allotment that was possible, so much work was done.

Thirty-six years did indeed pass from the first announcement of the undertaking before the final volume was issued. But what a range of inquiry, what an accumulation of illustrations, what a width of generalization do the volumes of the series not cover! All history, all science, all the varying forms of thought and belief, all the institutions of all the stages of man's progress were brought together, and out of the innumerable multitude of data emerged one coherent, luminous, and vitalizing conception of the evolution of the world. It is this harmony issuing out of many apparent discords, the oneness of movement flowing through and absorbing endless eddies and counterstreams and back currents, that constitutes Spencer's greatest glory, and that caused the multiplying army of readers of Spencer's successive volumes to feel the joy of discovering a great and ennobling vision of progress hitherto unrealized. If in later years some sense of the limitation of the inquiry has supervened, if some feeling has arisen of the insufficiency of the explanations offered of some steps in the proof, some apprehension of gaps uncovered in the synthesis, there still remains throughout all the varied populations of the civilized world the abiding undiminished conviction of a great gain realized, of a new plane of thought surmounted and mastered, new footholds of speculation secured which will never be lost in the education of man and the development of society. Admiration of the range of his inquiry, of the vigour of his analysis, of the scope and comprehension of his great theory must be our first impression in reviewing Spencer's work.

Yet must it never be forgotten that his one overmastering and dominant purpose was practical, social, human. Let it be noted that when it seemed too probable that his life would not endure to complete his design in all its parts he broke off the sociological analyses to reach forward to the right determination of the bases of individual and political ethics. To lay the foundation of these on bed-rocks of truth had always been his ultimate purpose. It was indicated in the first sketch of his proposed labours, and when preparatory clearances threatened to overwhelm him he left these works to achieve the essential purpose of his plan. The leading principle of his previous inquiries gave him the clue to the solution of this final problem. The self-adjustment of forces which he had found explaining all cosmic movements had a parallel in the self-adjustment of the forces through the working of which has been developed the society of men. In Spencer's vision it seemed inevitable that this should lead him to the highest exaltation of the worth of individual freedom and to contest with all his energy the interference of the rules of the many with the growth of the one. We may be permitted to cling to the faith that this conception presents a true aspect of ultimate evolution; and yet it must be admitted that not many of us could accompany Spencer in all the thoroughness of the immediate application of his principles to society as it is. If we know but imperfectly what we are and know not yet what we shall be, we may still believe in the ultimate realization of a perfect order without coercion, and of the service that shall be perfect freedom; and we may be bold to insist that meanwhile the presumption is against interference, the justification of which is a burden to be discharged. Spencer, indeed, in his late years, sadly took note of movements apparently in contradiction to the leading principles of his doctrines; and here I may recall a conversation, within a week of his death, between him and a friend who had once been wholly with him, but had latterly leaned to collectivist action. "We have been separated," said Spencer, "but, if we have been moving along different lines, I know we have both been moving to the same end." "Yes," she replied—it was a woman who showed that divergence of opinion could not detach her from offices of tenderness and love—"and it may be that in time some other method of attacking the great problem will be adopted, which will be neither wholly yours nor wholly ours." "Yes, it may," he said. Spencer, thus revealed, in the last week of his life, a mind open to receive new suggestions and to accept new proposals of change.

Standing here by these poor remains, so soon to be reduced to "two handfuls of white dust," we are irresistibly drawn on to accompanying Spencer in his last brave effort to scrutinize the implacable facts of life. The last chapter of his last book grapples with ultimate questions, and propounds his final judgment on the "Riddle of the Universe." No record can be more candid, no confession more striking, than that in which he is even appalled by the thought of space with its infinite extension and everlasting laws, enduring before evolution and creation declared things as they are. What is the place of man in this great vision? The brain so full and so powerful has ceased to act. There is no longer any manifestation of consciousness. Can consciousness survive after the organ on which it depended has ceased to be? Is the personality that dwelt in this poor frame to be admitted as in itself indestructible? Or must we acquiesce in its reabsorption in the infinite, the ever-abiding, the ineffable energy of which it was a passing spark? If indestructible in the future, must it not have been as incapable of coming into existence as it is incapable of ceasing to be? Our master knew not. He could not tell. The last enigma defies our question. The dimensions of the unknown may be reduced through successive ages, but, compared with our slender discoveries, estimated at the best, a vastness that remains must ever overawe us. Some fringes of the unknowable may yet prove to be capable of being known, but the great central secret lies beyond our apprehension. Yet two thoughts remain. If the night cometh in which no man can work, we may work while it is day. If we can work, it is somehow within our power to work for what is noble, for what is inspiring, for what is broadening, deepening, and strengthening the life of man. We may devote our lives to the service of supreme goodness. Looking back on the years of Spencer, we may say that he thus worked, he thus dedicated himself as truly and as bravely as any man enjoying the solace of a more definite creed. To this spirit, then, whose work survives, whose words

Digitized by Google

yet speak, the wave of whose influence can yet pass from generation to generation, we may say, in all the fullness of interpretation which the phrase can bear, "Farewell."

In a letter to the *Times*, Mr. Courtney apologizes for not having mentioned in his address the measure of condolence passed by the Italian Chamber, which he had overlooked on account of a hurried journey.

A Tribute from India.

After Mr. Courtney had spoken, Mr. Shyamaji Krishnavarma said:

After the touching and eloquent oration we have just heard, I hope a few words from a native of India will not be regarded out of place. The name of Mr. Herbert Spencer is a household word among my educated countrymen; personally, I owe a deep debt of gratitude to the writings of that truly great and good man whose loss we all bemoan to-day. As a trifling token of my respect and esteem, I offer £1,000, with the object of perpetuating the memory of that great benefactor of mankind. I propose to write to the Chancellor of the ancient and renowned University of Oxford, offering the amount for establishing a lectureship, to be called the Spencer Lectureship, like the Romanes Lectureship at Oxford; but, if, perchance, my own University decline the offer, I trust the Honourable Auberon Herbert and the other trustees, the executors and friends of Mr. Spencer, will kindly help me in establishing the Spencer Lectureship in London. I thank you all for allowing me to express publicly my indebtedness to Mr. Spencer on this solemn and memorable occasion.

The urn containing the ashes was placed in a cavity in a granite sarcophagus in Highgate Cemetery.

Proposed Memorial.

Mr. H. Osman Newland, Rawdon, Rastell Avenue, Streatham Hill, S.W., writes:

The lamented death of Mr. Herbert Spencer affords Englishmen an opportunity to do for their greatest philosopher in death what was denied him in life—the gratification of his desire to see the study of sociology tangibly recognized in this country, as it has been in America, France, and Germany. I suggest two ways in which this may be done: (1) the endowment of a Chair of Sociology at one of our Universities as a memorial to the late Mr. Spencer; (2) the establishment of a Sociological Society, under royal patronage, for the further encouragement and investigation of the science to which the late philosopher devoted his life.

In connexion with this second proposal, I may add that I would myself convene a meeting should a sufficient number of supporters communicate with me.

COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A meeting of the Council was held at the College on December 12, Present: Mr. Butler, Vice-President, in the Chair; Rev. G. C. Bell, Rev. J. O. Bevan, Dr Breul, Mr. Charles, Mr. Eve, Mr. Hawe, Rev. Dr. Hiron, Mr. Holland, Mr. Millar Inglis, Mr. Pinches, Mr. Rule, Rev. J. Stewart, and Mr. Vincent.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Christmas Certificate and Lower Forms Examinations had been held on December 8–11, and that the number of candidates was about 8,500. For the Christmas Examination of Teachers for Diplomas the number of entries was about 570.

Mr. W. E. Johnson, M.A., was appointed to deliver the Psychology Course of Lectures to Teachers in 1904.

Saturday, January 23, was fixed as the date of the next Ordinary General Meeting of the members of the College.

The report of the Examination Committee was adopted.

The draft report of the Council to the General Meeting was considered, and was referred to the President, Vice-Presidents, and Dean for final revision.

The following persons were elected members of the College:—

Mr. C. Pendlebury, M.A., 40 Glazbury Road, West Kensington, W.

Mr. F. E. Smith, Kingston, Ontario, Canada.

The following books had been presented to the Library since the last meeting of the Council:—

By C. J. Clay & Sons.—Kirkpatrick's Isla's Los Ladrones de Asturias (Spanish Translation of Gil Blas, chapters i.-xv.).

By W. B. Clive.—Watt and Hayes's Matriculation Selections from Latin Authors.

By Macmillan & Co.—Castle's Manual of Practical Mathematics; Hall and Stevens's School Geometry, Part IV.; Macmillan's Scott's Marmion, Cantos I. and VI.

By Methuen & Co.—Clough and Dunstan's Elementary Experimental Science.

By the Oxford University Press.—Jowett's Translation of the Four Socratic Dialogues of Plato; Macaulay's Selections from Gower's Confessio Amantis.

By Relfe Bros.—Carter's The Reigns of David and Solomon; Pilot's Mnemonics for Dates.

Calendars of the City of London College; University College, Nottingham; and St. Thomas's Hospital Medical School.

TECHNICAL INSTRUCTION FOR WOMEN.

The Report of the Committee appointed by the London County Council last April "to inquire into and report upon the requirements of women in respect of technical instruction and the facilities afforded them, with special reference to London," has just been issued. Little help has been got from Continental example, women's technical schools in France, Germany, Belgium, Italy, and Switzerland being day schools in which general education and technical training are carried on together. The Committee recapitulate the work carried on by the various day and evening classes, the results of the scholarship system, the work of the Battersea Polytechnic, and the trade classes. They set out three main difficulties in the way:

1. Women are loth to undergo the discipline and the fatigue of a thorough technical training because, unlike men, they do not consider bread-winning to be their settled work in life, and they approach industrial matters on the assumption that their wage earning is to be casual or only for a time. They desire, therefore, to be taught one particular process rather than to undergo technical training in its proper sense.

2. Women frequently work so late in the factory and workshop that they cannot attend evening classes, or, if able to attend, are unwilling to resume workshop practice, and prefer classes of a literary or recreative character. We think that the action of employers like Messrs. Debenham & Freebody and Messrs. Sélincourt & Sons might be more widely advertised with a view to inducing other employers to adopt a similar course. Messrs. Sélincourt & Sons have arranged to allow their apprentices to attend dressmaking classes on certain afternoons each week, and have given them one hour off work for this purpose, a second hour being taken from the girls' free time; they have paid half the fees of their apprentices, provided material for their work, and have awarded prizes for the best work done.

3. Experience shows that so soon as girls have left the elementary school they get beyond the reach of the influences which might have induced them to continue their education. This applies much more to girls than to boys. Girls are required at home, or they are put to work which needs no skill, and their occupation gives them no impulse to return to classes.

To recommend action similar to that of the two firms mentioned, the Committee draft a circular letter suggesting that it should be sent to the principal employers of women and girls in London. In conclusion, the Report makes 26 proposals, of which the chief are the following:—

That managers of girls' clubs and societies, as well as the parents of pupils, be invited to visit the classes and the exhibitions of work.

That teachers, whether in trade or domestic economy classes, be reminded of the importance of inducing their pupils to go through a thorough course of instruction in the subject taught, instead of confining their attention only to particular pieces of work needed for immediate use.

That industrial design be more closely associated with workshop practice and conditions.

That pupils at the end of their course receive certificates of attendance or written reports of work done.

That in technical day schools, or wherever a seasonal trade, such as artificial flower-making, is taught, care be taken to associate the trade instruction with instruction in other branches of industry which would provide work in slack seasons.

That classes be established for the training of women in hygiene and sanitation with a view to their taking up the occupation of sanitary, workshop, or public health inspectors, or of rent collectors.

That in domestic economy schools more thorough instruction be given in the care and management of infants and young children.

That classes be formed for teaching the marking and repairing of household linen, and the mending of lace and fine materials.

That day cookery classes be connected, when possible, with the provision of meals at restaurants.

That day or afternoon classes for the training of daily servants or charwomen be conducted on the lines of those held by the Women's Industrial Council.

That, wherever possible, women be employed as teachers of trade classes for women.

That the attention of governing bodies of technical institutes be drawn to the desirability of opening book-binding classes for women, emphasis being laid upon the artistic part of the work.

That dressmaking classes be brought into closer touch with the art classes.

That bodies having the control of apprenticeship funds be urged to make the apprenticeship of girls to any firm conditional on the provision of such facilities for technical instruction.

That, above all, employers be urged to make arrangements whereby their work-girls may attend technical classes during working hours.

That technical day schools for girls, with a course planned to cover three years, be opened as opportunity offers, an experiment being made in the London County Council Sydenham Technical Institute as soon as it is available.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—Ed. *E.T.*]

"ESPERANTO."

To the Editor of "The Educational Times."

Sir,—Referring to Miss Lawrence's letter in your issue of December 1, may I be allowed to say that she is hardly correct in supposing that the successor of Volapük is still so little known among the teaching world as to require an explanation and initiation? It is true, however, that—being a successor of that defunct impossibility, Volapük—mankind in general is perhaps less enthusiastic about Esperanto than would be the case if Volapük had not proved so singular a failure. But noticing, as we necessarily must, the rapid spread of the "Shorthand Language" in most countries of Europe, we cannot help asking why it is that we in England only quite of late have begun to take an active interest in Esperanto. Is it because we believe that English, and nothing but English, will be the universal language? An honest admirer of our language can hardly wish it more universally murdered than this is already being done—at home by the ubiquitous German waiter, in the Far East by the pidgin-English-speaking Chinese. Or do we not want a universal language at all? Certainly we do: and perhaps even more than any other European nation. Nor is it to be ascribed to our linguistic hesitancy. But what strikes me as the one reason is that the Britisher prefers others to experiment, disinclined as he is to rush enthusiastically into some new scheme without being perfectly sure of its ultimate value and success. John Bull, therefore, has never been asleep, but has always been ke ping open at least one eye to the birth and subsequent growth of Esperanto. He will not be able to lead the movement, but he will follow; for follow he must.—I am, Sir, &c.,

M.A. Oxon.

Mr. A. L. Schafer (Esperantist 7778), 8 Gloucester Crescent, Regent's Park, N.W., a teacher of languages, wishes to give his experience of Esperanto, adding that he "will gladly help any one to acquire the language (gratis, of course), or give information about it." He writes: "With Esperanto I found that it only took me a few weeks to learn what in other languages would have taken at least eighteen months or two years of careful study. . . . Added to its being easily mastered, it is also intensely interesting, very euphonic (sounding somewhat like Italian), and most expressive. In Esperanto every shade of human thought and feeling can be expressed as tersely as in any derived language, and it is adaptable to every range of subject, from science, philosophy, and poetry to commerce and topics of everyday life.

"I myself have corresponded in Esperanto with persons in Eastern and Southern Europe (strangers to myself, of course), with perfect ease and profit; and this possibility of corresponding with unknown individuals also develops breadth of mind and a certain feeling of interest and good-fellowship and kindness towards others."

Mr. J. C. O'Connor, B.A., Esperanto House, St. Stephen's Square, Bayswater, W., writes (December 1): "On the part of Esperantists all the world over, I thank you for the insertion of Miss Lawrence's letter. That 'Esperanto' is all, and more than all, that Miss Lawrence claims for it is evidenced by the testimony of such men as Count Leo Tolstoy and the late Max Müller. The former, speaking of the language, says: 'Esperanto is so easy to understand that when I received some time ago a grammar of the language I was able in two short hours, if not to write, at any rate to read, the language fluently.' And Max Müller, a short time before his death, declared: 'I certainly place Esperanto far above all its rivals.'

"Though a twelvemonth has not passed since I introduced 'Esperanto' into London its spread has exceeded my most sanguine expectations. Upwards of twenty groups for the teaching of the language are established throughout England. Three or four classes are at present in full swing in London; these are taught by those who were my first pupils in the language. In the suburbs also many classes are in existence. . . .

"I should be very glad indeed to give a blackboard demonstration of the language to my colleagues in the teaching profession in order to show them that the language is all that its advocates claim for it. In the meantime, as it is my intention to form a class for teachers (ladies and gentlemen) I should be very glad to hear from any of them who would like to take up the subject, when I shall at once make arrangements for same. Like all the other classes in Esperanto, this would be free of all charge."

INFORMAL EDUCATIONAL DISCUSSION.

A First Experiment.

To the Editor of "The Educational Times."

Sir.—It is almost certain that considerable changes in secondary education are imminent, and the comparative success or failure of such changes seems likely to depend largely on the answer which will be given to a very complex question: Are those who have special experience or knowledge of the subject prepared to submit to the new administrative Authorities wise, weighty, and well considered advice? If they are, there is great hope of real progress. If they are not, then the Authorities, lacking such necessary guidance, must fall into error and wander aimlessly along wrong paths.

But, in order to give good advice, and, above all, in order that such advice may be harmonious and systematic, there must be much preliminary discussion among experienced men of all sorts. Doubtless such discussions are being already carried on with much advantage, both in the educational press and in the meetings of many associations. But this is not enough. As every business man knows, whenever questions of difficulty and importance, involving the reconcilement of many conflicting views, have to be settled, the best method of arriving at a wise settlement is for those who are most concerned to meet and "talk matters over" in a perfectly free and friendly manner. Formal meetings may be required later; but such informal preliminary meetings are usually indispensable to success.

It is on such general grounds—which I only refer to most briefly, because they are patent to every one—that the Association of Assistant Masters has resolved to venture on a very modest, very simple, but, it is hoped, very useful, experiment. It is proposed to hold meetings of a social and strictly informal character in the evening of the third Thursday in every month, beginning in January, for the consideration of questions of general educational interest. For this purpose a room has been secured in London, and the Association will endeavour, from time to time, to secure the presence and help of those who have a special claim to speak with weight about education; but it is desired also to attract others who may be interested in the subject, and it is for this object that I venture, Sir, to ask you to give publicity to the proposed scheme by publishing this letter. Any further information will be readily supplied on application to the Secretary of the Association, 27 Great James Street, W.C.—I am, Sir, &c.,

T. E. Page.

Charterhouse, Godalming, *December* 21, 1903.

THE TEACHERS' REGISTER.

To the Editor of "The Educational Times."

Sir,—Would you permit me to call the attention of teachers in secondary schools to the fact that efforts are being made, and will continue to be made, in Parliament and elsewhere to bring about the suppression of Column B of the Register, so that there shall be absolutely but one list of all classes of teachers, excepting, of course, those to be placed in supplementary registers, as art teachers and the like?

I need not enlarge upon the seriousness of this prospect. To the elements of unfairness, delay, and uncertainty already existing, and affecting secondary teachers, other elements would be introduced tending to render registration more unpopular than it is at present, and also interfering with the work of organization and consolidation looked forward to and striven for during many years by that devoted class of public servants engaged in the all-important work of secondary education.

One illustration may be given. To further the end of reform and co-ordination it is essential that such teachers should be effectively represented on all Educational Authorities. Probably, at no distant time, the Register would come to be regarded as furnishing a constituency qualified to vote, district by district, for such representatives, or, at all events, to have a voice in their selection. If there be but one list, the elementary teachers would always be in a large numerical majority—a majority, it must be borne in mind, already effectively organized on trade union principles, under the banner of the N.U.T., as opposed to

Digitized by Google

secondary teachers, who, from the nature of the case and from the varying conditions of their work, cannot be said to be organized into one body at all.

Of course, various expedients would be suggested for securing what might be considered to provide a fair representation of different classes of teachers; but, from what one sees and hears, I should distrust the justice or the mercy of such expedients, or their permanent operation, as between two bodies of teachers with such different aims and traditions and with such different methods of organization. Secondary teachers may depend upon it that the most efficient safeguard will be the existence and retention of Column B.—I am, Sir, &c., J. O. Bevan.

Chillenden Rectory, Dover, *December* 16, 1903.

THE TEACHING OF GEOGRAPHY.

Cheap Ordnance Survey Maps for the Schools.

To the Editor of "The Educational Times."

Sir,—May I through your columns call the attention of teachers to an important concession which has recently been made to schools by the Board of Agriculture? Most teachers know how necessary Ordnance Survey maps are for sound class teaching in local geography; but the price has hitherto been prohibitive. In response to memorials from various sources the Board of Agriculture has now issued instructions that special editions of the one-inch maps be supplied to Education Authorities at the following prices:—200 copies, £1. 5s.; 500 copies, £2; 1,000 copies, £3; 5,000 copies, £12. For larger numbers the estimated price would be £2 per 1,000 copies. The only stipulation made is that on no account are the maps to be sold. It is universally agreed that all sound geographical teaching must begin in a study of the home region, and it is therefore to be hoped that most teachers will avail themselves of the facilities so generously granted, either individually or by making application through the Local Education Authority. Further information may be obtained through the Geographical Association.—I am, Sir, &c., A. J. Herbertson,

Hon. Secretary Geographical Association.

School of Geography, Oxford.

ASSOCIATIONS OF SCHOOL MANAGERS AND TEACHERS.

To the Editor of "The Educational Times."

Sir,—I shall be very grateful if any of your readers can send me information with regard to any joint association of managers and teachers of *all classes* of schools, with, if possible, the addresses of the secretaries and copies of the rules of such associations.—I am, Sir, &c.,

(Miss) K. F. H. Garnons Williams.

Aber Camlais, Brecon, South Wales.

December 14, 1903.

We are happy to say that Mr. Charles Pendlebury is not "the late," as we unfortunately stated in noticing his admirable "Arithmetic for the Standards" in our December issue (page 515). We are assured that the two words "are premature," or, as Mark Twain said under like circumstances, the news is "much exaggerated"; and, indeed, that he is "very much alive." Long may it be so! We are glad to note that he is one of the most recent accessions to the membership of the College of Preceptors.

REVIEWS.

A Library of Modern History.

The Cambridge Modern History. Vols. I. and VII. (16s. net each. Cambridge University Press.)

This great and distinctive work—a narrative of "the general history of Europe and of her colonies since the fifteenth century"—was planned by the late Lord Acton, Regius Professor of Modern History in the University of Cambridge. It has been written by a large number of experts in various departments of historical inquiry, co-operating under the general scheme, and it is produced under the editorship of three other Cambridge men of distinction in historical study—Dr. A. W. Ward, Litt.D., Dr. G. W. Prothero, Litt.D., and Mr. Stanley Leathes, M.A. Each volume—the complete work will be in twelve volumes—extends beyond 800 royal octavo pages. The printing is worthy of the traditions of the Cambridge University Press; the paper is light, so as to render the large volumes easy to handle; and the binding (in buckram) is most conveniently flexible as well as strong. Apart from the uses of the general reader, who will certainly not find elsewhere any more accurate, instructive, or agreeable presentation of the course of modern history, the work is pre-eminently suitable for the shelves of the school library, where it is sure to attract the inquiring student to clothe and to vitalize the bones of his ordinary text-book, and not unfrequently to discover and to remedy traditional malformations.

The aim of the work is "to record, in the way most useful to the greatest number of readers, the fullness of knowledge which the nineteenth century has bequeathed to its successor." This "way" is not the way of the universal modern histories hitherto produced, and well produced, in Germany and in France. It does not lead to an agglomeration of separate histories of the different countries: "it moves in a succession to which the nations are subsidiary"—fully depicted, but disposed on a principle of much wider scope. Their stories are told "not for their own sakes, but in reference and subordination to a higher process, and according to the time and the degree in which they influence the common fortunes of mankind." Accordingly, "some historical fact of signal importance" has been chosen as the central idea to be expounded and illustrated in each of the volumes, and round this are grouped the pertinent individual developments in the several countries, "not accidentally, but of reasoned purpose." The whole of the history of modern times, so far as Europe and its outgrowths are concerned, is thus recast in a fresh mould, so as to display the world-significance of the notable movements and so as to exhibit in their real historical relations the great ideas, achievements, and figures of the period. The chronological and geographical details are made subservient to the larger and more instructive conception. The immense importance of such a standpoint of treatment is very obvious on the simple statement, and the reports of the survey contained in these volumes mark the highest reach of general historical presentment in our time. The results cannot but work an incalculable influence on historical studies in the immediate future.

From the plan of the work it becomes at once evident that the collaboration of many experts was absolutely necessary for its adequate execution. The more liberal access to archives, which has been largely gained through the progress of historical studies, as well as through the widening of the intellectual outlook, has opened out to students vast masses of fresh materials; and the materials already accessible have had to be investigated at first hand. The editors make a sufficiently severe statement on this point:

> In view of changes and of gains such as these [new materials], it has become impossible for the historical writer of the present age to trust without reserve even to the most respected secondary authorities. The honest student finds himself continually deserted, retarded, misled by the classics of historical literature, and has to hew his own way through multitudinous transactions, periodicals, and official publications in order to reach the truth.

Yet, severe as this statement is, no one that has worked at an historical period or episode at first hand can fail to recognize its painful truth. From time to time we have mildly hinted as much in notices of current history books for school use, though we have felt it unfair to press hard on particular writers in view of the conditions of historical study inevitably prevalent. The warning of the editors of the present work, however, must be laid to heart; and, judging from the enterprise of competitive school historians, we have no doubt that they will. Meantime, the division of the present work among a large and varied body of scholars who have devoted special study to special periods gives it a value that it could not possibly have otherwise commanded. One has merely to look at the list of authorities—a severely select list, too—in order to be duly impressed with the hopelessness of any single-handed attempt to deal with the whole compass of the materials.

The first volume is devoted to "The Renaissance." Its plain purpose, of course, is to describe and discuss the Renaissance as a movement of European history; but it necessarily takes a wider scope—"it is also designed as an introductory volume whose business it is, as it were, to bring upon the stage the nations, forces, and interests which will bear the chief parts in the action." Each chapter, accordingly, "includes so much of antecedent, especially of institutional, history as seemed necessary to the clear understanding of the conditions with which it is concerned"—British history, however, being substantially

Digitized by Google

assumed as already known to English readers. A brief, but comprehensive and pointed, "Introductory Note," by the late Bishop Creighton, at once places the reader at the right point of view. "The Age of Discovery" and "The New World" are depicted by Mr. E. J. Payne, whose independent publications have fully established his right to speak with authority. Prof. Bury narrates "The Ottoman Conquest." Mr. Stanley Leathes has had the advantage of Dr. Hodgkin's experienced guidance in the treatment of "Italy and her Invaders," and of Dean Kitchin's in his later chapter on "France." "Florence" is handled by Mr. E. Armstrong and Mr. L. Arthur Burd—the one grouping his narrative around Savonarola and the other around Macchiavelli. "Rome and the Temporal Power" has fallen to Dr. Richard Garnett; "Venice" to Dr. Horatio Brown, who has made the subject his own; "Germany and the Empire" to Prof. Tout; "Hungary and the Slavonic Kingdoms" to Dr. Emil Reich; "The Catholic Kings" to Mr. H. Butler Clarke. Dr. Ward, one of the editors, deals very ably with "The Netherlands," a most interesting section; Dr. James Gairdner is quite at home among "The Early Tudors"; Dr. Cunningham traces lucidly the history of "Economic Change"; Sir Richard Jebb writes on "The Classical Renaissance"—one of the most learned and interesting of the chapters; Dr. M. R. James describes "The Christian Renaissance," and Dr. William Barry "Catholic Europe"; and, finally, Dr. Henry Charles Lea, whose special studies in the period are well known, depicts "The Eve of the Reformation." The team is certainly a very strong one. The weight of learning, however, does not depress the style. The whole volume is eminently readable. and the unity of tone is remarkable.

The seventh volume—the second in order of publication—is concerned with "The United States." In treating a single nation through a continuous history of some three hundred years, it seems to make a departure from the original general plan, which was "that the history of each people should be taken up at the point at which it was drawn into the main stream of human progress as represented by the European nations." The justification offered by the editors, which tends to show that the departure is more apparent than real, need not be examined too closely: reasons of convenience are amply sufficient. Mr. J. A. Doyle, who has already treated the early history at length in esteemed volumes, reviews "The First Century of English Colonization (1607–1700)" and the progress of "The English Colonies (1700–1763)"; and, after Miss Mary Bateson has narrated the successive periods of colonization by "The French in America (1608–1744)," and Mr. A. G. Bradley has described "The Conquest of Canada (1744–1761)," Mr. Doyle discusses "The Quarrel with Great Britain (1761–1776)," and thereafter outlines "The War of Independence (1776–1783)." The legal and political contentions of the colonists, issuing in "The War of Independence," are luminously handled by Prof. Melville M. Bigelow, of Boston University Law School, although the doctrine of "legal" right is still open to closer examination in the purely theoretical aspect. Prof. Bigelow also expounds at considerable length the making and the contents of "The Constitution," justly recognizing Alexander Hamilton as "the master spirit of the Convention which framed the Constitution of the United States and of all that led to it"—"youngest and greatest man of them all." Prof. J. B. McMaster, of the University of Pennsylvania, contributes three important sections—"The Struggle for Commercial Independence (1783-1812)," "The Growth of the Nation (1815–1828)," and "Commerce, Extension, and Slavery (1828–1850)." "The War of 1812–1815" is briefly related by Mr. H. W. Wilson, who also outlines, in a later chapter, the "Naval Operations of the Civil War (1861–1865)." President Woodrow Wilson, of Princeton, deals capably with the ticklish subject of "State Rights (1850–1860)." The story of "The Civil War (1861–1865)" is narrated in three vivid chapters by the late Mr. John G. Nicolay, who also treats generally of "The North during the War," the corresponding general chapter on "The South during the War" being furnished by Prof. J. C. Schwab, of Yale. The era of "Political Reconstruction (1865–1885)" is judiciously presented by Assistant Prof. Theodore Clarke Smith, of Ohio State University. Prof. J. B. Moore, of Columbia, treats of "The United States as a World-Power (1885–1902)" very interestingly, if rather disproportionately to the scope of the volume. The "Economic Development of the United States" is traced by Prof. H. C. Emery, of Yale, in a well balanced chapter that offers lessons for our current fiscal controversy; and Prof. Barrett Wendell, of Harvard, supplies the final chapter on "The American Intellect."

It is pleasant to note the very large share that has been taken by American scholars in the writing of the American volume. The appended bibliographies are extensive and most useful. If the remaining volumes show the same thoroughness as the present two—and there is every reason to anticipate that they will do so—the whole work will furnish a library of modern history eminently creditable to English scholarship, and especially honourable to Cambridge.

British Economics—History and Practice.

(1) *The Growth of English Industry and Commerce in Modern Times.* In two Volumes. Part I., *The Mercantile System;* Part II., *Laissez Faire.* By W. Cunningham, D.D., Fellow of the British Academy, Fellow and Lecturer of Trinity College, and Vicar of Great St. Mary's, Cambridge, &c. (25s. net. Cambridge University Press.)

(2) *British Industries under Free Trade.* Edited by Harold Cox. (6s. Fisher Unwin.)

(1) These two ample and handsome volumes constitute the modern section of Dr. Cunningham's comprehensive survey of the growth and development of English industry and commerce. It is fully twenty years since the work appeared in its original form, and the present is the third edition. The author's experience as a college lecturer since the publication of the second edition eleven years ago has, he acknowledges, brought him "to see many of the matters dealt with in truer proportion." Thus:

> I have given more attention to the economic affinities of different political personages and parties; I have noted more definitely the disastrous effects of the Civil War on the social and industrial organization of the realm; and I have been able to write more justly of the Restoration period, which so closely resembles our own.

These, however, are but large general indications; the fact is that the work has been entirely recast: "hardly a paragraph has been incorporated in this edition without alteration, and the greater part of it has been more than once rewritten." In the notes also, which occupy considerable space, there have been inserted "additional illustrations and occasional allusions to analogous changes in other countries," as well as similarly helpful references. The more instructive literature of the subject is marshalled in a bibliographical index under several heads, the contemporary literature being conveniently arranged in chronological order. There are also several appendixes containing important illustrative documents or explanatory remarks.

With all these changes in detail the general character of the work remains essentially as it stood. Dr. Cunningham, while describing and seeking to account for the actual course of the material progress of the country, exhibits the intimate interconnexion of the political and the economic history of the nation from the beginning of the Elizabethan period down to 1850. The treatment is based on the widest investigation, including not only original documents and English writings but also the criticism of foreign students, and it is conducted with much intellectual energy and in a broad spirit. The whole narrative and discussion is remarkably fluent and interesting. The work, if not already a classic, is in a very fair way to become a classic; in the meantime, at any rate, it is the most outstanding review of the subject.

The writer of a history must draw the time-line somewhere; but, after all, it is now a far cry from 1850. True, the handling of the economic events of the past half-century involves unusual difficulties: "since economic causes do not lie on the surface, there is all the more danger that men may fail to appreciate the really important forces that are at work in their generation." Still, the nation is continuously working out its destiny under the influence of economic forces; buying and selling, exports and imports, go on day after day; the Chancellor of the Exchequer takes stock once a year; and surely half a century is a sufficiently large space to indicate to the critical historian the tendency and the behaviour of the economic currents. Other writers, indeed, have not been restrained by the difficulties that deter Dr. Cunningham; politicians have again and again raised the crucial question of principle supposed to be finally settled in the later forties; and now public affairs are convulsed by a fresh attempt to revolutionize the economic system, and Dr. Cunningham furnishes no analysis of the past fifty years' experience for our practical guidance on an issue that, we are told, involves the very existence of the Empire. Yet we have no doubt that Dr. Cunningham has exercised a wise discretion; he will see his way very much more clearly within the next decade. His "Postscript" shows plainly enough that it is more judicious for him to adhere to the *rôle* of historian pure and simple than to attempt to evolve

Digitized by Google

the future from the past. Some of the points he makes are obvious enough; others seem open to adverse criticism, as based on incomplete grasp of the essential factors; the more immediately important are all but paralyzed by caution. We read on the margin, however, that the expectations of Cobden and his friends as to the action of other nations "have not been fulfilled," that "it may be wise to abandon commercial *laissez faire* for the sake of securing our food supply," and that "temporary retaliation might prove to be a step to universal free intercourse" (pages 869–70). The expression, though carefully tentative and in the "potential" mood, is sufficiently suggestive. We cannot discuss the matter here, because an academic argument is so apt to be taken as a political and party argument when the question is a burning one; but any student that will compare Dr. Cunningham's representation of the attitude of Cobden and his friends with the well known facts can decide for himself whether or not that statement is historically or critically satisfactory. However, the weaknesses of the postscript must not be allowed to diminish one's admiration of this great work.

(2) The Secretary of the Cobden Club brings together, in a compact and handy volume, a score of "Essays by Experts" upon as many of the principal branches of British trade: cotton, wool, linen, silk, banking, shipping (liners and tramps), cutlery, tinplates, confectionery and preserves, groceries, paper, alkali, soap, boots and shoes (with note on leather), flour milling, iron and steel, machinery and engineering, and coal. The essays are full of facts, and the conclusions drawn are based on practical experience. The writers are unanimously and decisively in favour of free trade. Mr. Cox furnishes a piquant preface enforcing the same view. The volume is most opportune and valuable for serious students of the problem, and it constitutes a challenge that opponents cannot afford to disregard.

Classical Causeries.

Lectures on Classical Subjects. By W. R. Hardie, M.A., Professor of Humanity in the University of Edinburgh. (7s. Macmillan.)

There are ten lectures. The first half of them are concerned with the spirit and ideas of the classical poets—their feeling for Nature, their beliefs as to a life after death, their treatment of the supernatural, their conception of the Age of Gold (with somewhat special reference to Virgil's fourth Eclogue), and the vein of romance in Greek and Latin literature. The two next deal with the language and the metrical form of poetry. The three last are occupied with literary criticism at Rome, the revival and progress of classical studies in Europe, and the aims and methods of classical study—useful and suggestive sketches, introductory to the various subjects and disclaiming completeness. Prof. Hardie does not address the professional scholar; he is content "if some of these lectures be thought to set a useful example of a simple and unambitious line of inquiry, which consists rather in collecting and arranging what the ancients have to say on some important topic than in theorizing about it or criticizing the theories of other people." The chapters are simple, scholarly, and very interesting talks, marked by careful observation, sympathetic intelligence, delicate discrimination, and luminous illustration. Some of them appear to have been delivered as introductory class lectures, others as addresses to local societies of a more or less popular membership; yet the scholar, too, will read them with restful pleasure. As to the aims and methods of classical study, it may seem somewhat paradoxical to say that "there has been but little real discussion of this subject in Great Britain." That depends on the point of view. Prof. Hardie's analysis and illustrations, in any case, will be found instructive. If any one affirms that "all we need to do is to read some clear and eloquent account of the life and thought of the ancients, or some authoritative critical treatise on the ancient authors, in order to get all the real advantage that can be got from a classical training"—which probably not even Prof. Armstrong or Prof. Perry will affirm—Prof. Hardie will reply that this is "quite illusory."

Generalizations about the life and thought of a past age are mere empty phrases, unless we possess some direct acquaintance with that life and thought. Critical description of an author's merits and defects is one of the most useless forms of human knowledge, unless we can read the author ourselves, and feel that it is true. The key to the whole lies in the laborious mastery of details—in the first instance, in minutely accurate study of grammar and idiom.

Yes; for the mastery of the scholar. But the argument scarcely touches the fringe of the real question—the question of the schools, the question of making the most of classics for the student whose chief interests lie elsewhere. Prof. Hardie, moreover, does not seem to have worked out his argument in wider applications; else he might have discovered that it would lead him to some awkward results. He is but very gently combative, however, and his interest is with the scholarly student. Placid, leisurely, refined, agreeable essays—the natural product of a pedagogic region where the struggle of life is overpast and forgotten, and where time has ceased to be of the essence of the problem.

How to teach Arithmetic.

The Teaching of Arithmetic. By W. P. Turnbull, M.A. (2 vols. 4s. net each. Newmann.)

To the growing sense of the importance of intelligent teaching in schools of all grades we owe such books as the present treatise, which comprises a series of very instructive lessons for those intending to teach arithmetic. Many of the methods advocated are derived from foreign sources, and the practice on which the author lays perhaps most stress, doubtless because of its wide application, is that of imparting to a pupil a knowledge of first principles by means of ocular demonstration, before employing those principles as the basis of mechanical rules. A child throughout his training in both the preliminary and the more advanced processes of elementary arithmetic is to gain his first knowledge of the essence of each portion through oral, practical, and mental exercise rather than through written work, which finds its true place in the course of instruction when practice in methods already well understood is the main object to be attained. Lengths with *appreciable breadth* are recommended as amongst the best machinery for the practical demonstration of fundamental truths about numbers, and the author points out that an excellent apparatus for the purpose exists in Tillich's "brick-box." There is, the writer asserts, an advantage in always adopting similar types of illustration in connexion with a special point, inasmuch as variety is wont to distract the mind and to make it less ready in forming from the concrete example an abstract conception. Again, for imparting ideas about number there is (to quote the author's views) superiority in the "brick-box" over devices of which the ball-frame may be taken as an example, because the former creates imperceptibly in the minds of pupils the sense that number forms a continuous series and does not consist essentially of separate integers; hence no false impression is given of the whole, only to be shown later to be inaccurate and then destroyed with difficulty, if indeed at all. The latter argument is of general significance and not applicable merely to Mr. Turnbull's subject; for it cannot be urged too often or too strongly that in every branch of study the aim should be to teach in such a manner that what is learnt may be capable of receiving hereafter additions and extension, whilst no portion of it should be liable to be assailed as unsound. The author deprecates, and rightly, all looseness of language and slovenliness of proof. A valuable idea, when the size of classes admits of its being carried out, is embodied in the suggestion that individual pupils should be accustomed to work on the blackboard before the class; and the excellence of the practice will be increased if it be understood that the remainder of the class is in a measure held responsible for the correction of errors made. It is of course unlikely that Mr. Turnbull's particular methods will all meet with equal and universal approval, but the readers for whom his book has been specially prepared are strongly recommended to study it in detail, and they will recognize the interest and utility of the new work as a text-book for their use.

GENERAL NOTICES.

CLASSICS.

Selections from Tibullus and others. Edited by J. P. Postgate, LL.D., Fellow and Senior Classical Lecturer of Trinity College, Cambridge, and Professor of Comparative Philology in University College, London. (5s. Macmillan. "Classical Series.")

A little more than a quarter of the space is occupied by the text (63 pages), the rest being given to notes and appendixes (pages 65–228). Two-thirds of the text consists of a dozen judiciously representative excerpts from Tibullus; the remaining third is disposed under the German title of "The Messalla Collection," the genesis of which is acutely discussed in the introduction. Prof. Postgate has tried to meet the wants of two classes of readers. "It has been my aim in the explanatory notes," he says, "to give, as far as possible, brief and simple comments upon the text that I have adopted, re-

Digitized by Google

serving the points that required longer or more advanced discussions to be dealt with in appendices." He has reconciled the diverse objects with much address. The whole work has been thoroughly considered, and the more difficult questions have evidently been turned over in the author's mind for many years. It is an exemplary specimen of classical editing. There are 15 illustrations (four full-page) and a map of the two Aquitanias. The print and the get-up are of the usual excellence of the "Classical Series."

Pro Patria: A Latin Story for Beginners. By E. A. Sonnenschein, D.Litt. Oxon., Professor in the University of Birmingham. (2s. 6d. Swan Sonnenschein.)

A sequel to "Ora Maritima," after the same plan—the Latin text to be "classical in form but modern in setting." So the scene is laid in a country house on the Kentish coast, and afterwards at Winchester, and the time of the action is September, 1899, to June, 1900. The first part is occupied with a study of Roman Britain in connexion with a visit to Richborough Castle; the second with the Boer War. "Party politics are, of course, kept out of view"; but the spirit of them is not so easily repressed, although one may not feel this so distinctively in the latitude of Birmingham as elsewhere. We are all "pro patria," but the waving of the "vexillum Britannicum" (page 56) might have been performed with more general enthusiasm in connexion with a less violently disputed series of events, of which the end is not yet. The general idea of the work is excellent, and the preparations, exercises, and vocabulary are well conceived and worked out.

A First Latin-English Dictionary. Compiled by A. C. Ainger, M.A. (2s. 6d. Murray.)

A very handy volume, just over two hundred pages, including a considerable selection of proper names as well as of the common vocables. Mr. Ainger hopes that it "may enable the learner to dispense with vocabularies": it may, though the hope is probably destined to be but a pious aspiration. "The book will supply nearly all the words found in Virgil and Horace, and in the easier Latin prose authors." It is executed with great care, and it is printed with admirable clearness. It will be a special boon to pupils that do not intend to carry their Latin studies beyond the simplest authors.

MATHEMATICS.

Mathematical Crystallography. By Harold Hilton, M.A. (14s. net. Clarendon Press.)

The purpose of the work is excellent, and those to whom the subject is of interest or importance will greatly appreciate the help which the author has set himself the task of giving them. From foreign treatises on crystallography he has collected and adapted important theorems and results connected with the mathematical theory of the science which have not been demonstrated in recent English works; and he thus presents in compact form a fund of information which the student could not collect for himself without a large additional expense and labour, and which possibly he would never obtain at all without timely assistance. With the important but independent study of the practical application of individual theorems the writer does not deal, this branch of the subject being fully treated in already existing English text-books. Moreover, he does not attempt an exhaustive account of crystals from the point of view of the physicist. Mr. Hilton disclaims originality, but the service rendered to science by the production of works of a kind similar to his present one has a special value of its own.

Principles of Arithmetic. By H. O. R. Siefert. (2s. 6d. Heath.)

The author presents in book form the substance of several addresses by him to the teachers of the Milwaukee public schools, embodying his ideas with respect to effective methods of teaching vulgar and decimal fractions, ratio and proportion, and some of the other important rules of arithmetic. Much of the text will be found to be already familiar to the generality of teachers; but, on the other hand, a number of valuable suggestions seem to be original, and the whole is the expression of the author's conviction that arithmetic may be used as a medium of true education and mental discipline if only the opportunities offered by it for drawing from the pupils themselves the elements of their future knowledge be properly used. All Mr. Siefert's methods are not equally good; but, in his preface, he strongly recommends individual teachers to make any such alterations and improvements as may seem to them to be advisable.

A Junior Geometry. By Noel S. Lydon. (2s. Methuen.)

Mr. Lydon provides an elementary course of practical and theoretical work in geometry, and deals with a large portion of the subject-matter of Euclid I.–IV. and VI. In many respects the small volume is a useful one, and the author's method of connecting allied problems and theorems is interesting as well as suggestive. Alterations are needed, however, and also additions (in the form of lemmas, of limitations of statement, and of proofs of construction), before the subject of the text can be held to have been fully and satisfactorily treated.

Elementary Graphs. By R. B. Morgan, B.Litt., L.C.P. (1s. 6d. Blackie.)

A little text-book of the right kind. The theory is clearly explained in simple language, and there are plenty of exercises. A desire to know more of the subject will probably be kindled by the indications which the author gives of the many ways in which the theory can be applied to questions of general interest.

SCIENCE.

Electricity and Magnetism. An Elementary Text-Book, Theoretical and Practical. By R. T. Glazebrook, M.A., F.R.S., Director of the National Physical Laboratory. (7s. 6d. Cambridge University Press. "Cambridge Physical Series.")

With all the crowd of books on elementary chemistry there is plenty of room for the present volume. There is never lack of room, it is said, at the top. A considerable portion of the work "has been in type for a long time. It was used originally," says Mr. Glazebrook, "as a part of the practical work in physics for medical students at the Cavendish Laboratory in connexion with my lectures, and was expanded by Mr. Wilberforce and Mr. Fitzpatrick in one of their 'Laboratory Note-books on Practical Physics.'" Now it has been brought up to date by Mr. Fitzpatrick. The genesis and growth of the book—and this is just how a text-book ought to originate and develop—excites high expectations, which are fully realized. The exposition is ample, lucid, and compact; the illustrative experiments are well devised and set out, and the various apparatus are well described. A considerable number of examples are given to be worked by students, and the answers are appended. There are 270 figures. The volume is beautifully printed and substantially bound, and, altogether, the student will hardly find any more efficient guide to the subject.

Steel and Iron. For Advanced Students. By Arthur R. Hiorns, Head of the Metallurgy Department, Birmingham Municipal Technical School. (10s. 6d. Macmillan.)

Too much stress must not laid on the intimation that the book is "for advanced students"—the sub-title is meant to convey simply "that it is not an elementary book for beginners, and is designed to supply the wants of students pursuing a second or third year's course in a college or technical school." Mr. Hiorns has laboured to present general principles in a comprehensive way, and has worked into his exposition a very large quantity of information that the student would otherwise have to gather from the pages of many heavy volumes or from the "Journals" of the Iron and Steel Institute. The most recent views of authorities on the subject appear to be fully and fairly represented. Mr. Hiorns treats of refractory materials, fuel, ores, methods of extraction, furnaces, processes, and mechanical tests; and his eye is steadily fixed on steel. The selection of matter is marked by practical and pedagogic experience. The statement is quite clear and fluent, and there are 131 pertinent illustrations (besides the frontispiece). The volume is able and judicious, and will prove exceedingly helpful to the students the author has more especially in view.

Elementary Bacteriology. By M. L. Dhingra, M.D., C.M., D.P.H. (3s. net. Longmans.)

Dr. Dhingra designs "not so much to marshal facts as to point out principles and suggest problems"; and, while fully acknowledging the achievements of the science, he frankly recognizes its difficulties and limitations. Part I. explains the characteristics of bacteria and their operation generally in Nature, with practical references to the processes of fermentation, putrefaction, and preservation of foodstuffs. Part II. deals with them in the various forms of disease they set up. The treatment is concise, pointed, and effective. There is a coloured frontispiece (six figures); also twenty-six illustrations in the text.

FRENCH.

A Historical French Grammar. By Arsène Darmesteter, late Professor of the History of the French Language and of Mediæval French Literature at the Sorbonne. Edited by Profs. Ernest Muret and Léopold Sudre. Authorized English Edition by Alphonse Hartog, formerly Professor of French at the Royal Academy of Music. Book II.: *Morphology*, or the Study of the Grammatical Forms. (3s. 6d. Macmillan.)

The name of Prof. Darmesteter guarantees the highest class of workmanship; his pupils MM. Muret and Sudre edited the original work for posthumous publication with filial care; and Prof. Hartog has faithfully observed the tradition. Even where the subject is not a substantive study the volume will be found very useful for collateral reference; and, probably enough, if it get into the hands of pupils, they will read it privately with avidity. A most able, instructive, and interesting work.

An Outline of French Literature. By D. T. Holmes, B.A. (2s. Holden. Prof. Meiklejohn's Series.)

Mr. Holmes has founded his "Outline" on the "Littérature Française" of Prof. Meunier. In brief compass (164 pages) he gives a fairly proportioned, judicious, and readable sketch of the subject. The final chapter, however, might have been considerably fuller with advantage.

A Primer of Old French. By G. H. Clarke, M.A., and C. J. Murray, M.A. (2s. 6d. Blackie.)

The authors presuppose familiarity with modern French, and propose to introduce the student to "a more critical study of the language

Digitized by Google

from a historical point of view." An introduction (22 pages) sketches the early history of French, and exhibits outlines of Old French accidence (*Langue d'oïl*). Then "specimens," with "translations" (into modern French) and a few notes (87 pages), furnish reasonable opportunities of exercise. The plan is carefully thought out and very competently executed.

ENGLISH READERS.

The Royal King Infant Readers, Nos. I. and II. (5d. and 6d., Nelson), are prettily and substantially got up, and the matter is appropriate.—*The First Primer* to *McDougall's Alexandra Readers* (2d. and 3d.) is carefully graduated and elaborately illustrated in colours.—*Cassell's Union Jack Series*, Books 2 and 3 (9d. and 10d.), give interesting and simple lessons, with many illustrations, some of them coloured.

Messrs. Horace Marshall & Son have just issued several more of their extremely interesting, prettily illustrated, and attractively got up reading books for young folks: *Stories from the Latin Poets*, by Margaret R. Pease (1s.), and *Children of Odin*, by E. E. Speight, B.A. (1s.), which make Nos. 3 and 4 of the charming "Romance Readers"; *Tales from Chaucer*, admirably told by Clara L. Thomson (2s.); *Selections from Froissart's Chronicles*, edited by N. L. Frazer, B.A. (2s.), "with a view to please and interest, not to worry and perplex," his young readers; *Little English Poems*, arranged and illustrated by Lettice Thomson (1s. 6d.); and *The Adventures of Duke Huon of Bordeaux*, by Beatrice Clay, B.A. (1s. 6d.). All these books would be read with avidity out of school as well as in class.

Mr. J. Logie Robertson, M.A., himself a poet, has already done much for the study of English literature, and now he edits *The Select Tennyson* "for school and college and private study," in three parts—(1) "The Princess," (2) "In Memoriam and Grecian Idylls," (3) "Early Poems and English Idylls" (1s. 6d. each, Longmans)—with excellent judgment and instructive commentary.

No. I. of the "Holborn Geographical Readers" provides an *Introduction to Geography* (9d., Educational Supply Association), which handles the matter in a very attractive fashion, with good illustrations. The type is excellent, and the book is bound for wear.—Stages I. and II. of the "Pestalozzi Series" of *Geographical Readers* (Newmann), also well printed and strongly bound, treat "Home and Neighbourhood" from the "concrete objective standpoint" and in alliance with Nature study. They are simple and lucid, and distinctively illustrated.

Miss Edith Hirons has written *In Nature's Storyland* (2s. 6d., Philip) to furnish "Nature stories to correlate with Nature lessons," and each story is illustrated by a pen-and-ink drawing by E. K. Reader. The children will be delighted with it.—*The Greenwood Tree*, in Mr. Edward Arnold's delightful series of "Literary Reading-Books," is "a book of Nature myths and verses," judiciously chosen and excellently printed, illustrated, and got up.—*Ways of the Six-footed*, by Anna Botsford Comstock, B.S., Lecturer in Cornell University Extension (2s., Ginn), is more advanced. It consists of stories "written with the definite purpose of illustrating the great primal truth that wherever there is life there are problems confronting it, and that the way of solving these problems has been the way to success in the evolution of a species." It is, perhaps, rather for home than for school reading. The treatment is simple, attractive, and very instructive.—*The Insect Folk*, by Margaret Warner Morley (2s., Ginn), is, perhaps, less a reading book than a practical companion to the observation of insects. "Look more than read." It is very interesting and sympathetic. Both the last volumes are excellently printed, illustrated, and got up.

AMERICAN HISTORY.

Hero Stories from American History. By Albert F. Blaisdell and Francis K. Ball. (2s. 6d. Ginn.)

The period drawn upon is the first half century of American national life. The book is meant for pupils of twelve to fifteen, and "for collateral reading in connexion with the study of a formal text-book on American history." The authors have naturally selected "rapid historical narratives, treating of notable and dramatic events," and made free use of personal incidents and anecdotes. The stories are brightly told, and the illustrations are numerous and effective. "Questions for review," books of reference, &c., are usefully supplied in appendix. There is a full index. British susceptibilities need not prevent the use of the book on this side of the water. Print and binding are excellent.

Essentials of American History. By Thomas Bonaventure Lawler, M.A. (4s. 6d. Ginn.)

Mr. Lawler treats in brief compass, and with lucidity and fairness, the political, industrial, and territorial development of America. The earlier history is very fully traced; it is towards the end of the first third of the book (page 119) that we reach the Heights of Abraham, Green's (not Greene's) date for the commencement of the history of the United States. But the book is well proportioned, the matter is judiciously selected, and the style is perspicuous. There are numerous maps and illustrations, which add greatly to the utility of the work. An appendix contains questions on the text and a variety of constitutional information.

First Lessons in United States History. By Edward Channing, Professor of History in Harvard University. (3s. 6d. Macmillan.)

As the title imports, only the main matters are presented, and that in very simple outline. The work is very readable, and will serve its purpose admirably. The print and binding are excellent, and there is an abundance of appropriate illustrations, many of them coloured.

"Source Readers in American History."—No. 4: *The Romance of the Civil War.* Selected and annotated by Albert Bushnell Hart, of Harvard University, with the collaboration of Elizabeth Stevens. (3s. 6d. Macmillan.)

The four volumes of this excellent series throw most welcome light on the various periods. The present work gives 109 extracts illustrative of the actualities of the Civil War period: "it contains something of the spirit of North and South at the beginning of the war, and much about the life of the soldier and the citizen while it was going on, with some of the battle, smoke, and dust." It will contribute powerfully to realization of the historical conditions in the warfare by land and sea, in the hospitals, and in the homes of the people. The national poetry, which centres largely about the Civil War, is suitably represented. The illustrations are fairly numerous and representative, but the real interest lies in the text, and it is many-sided and intense.

MISCELLANEOUS.

Little Poems for Little People. Chiefly by Edward Shirley. (Nelson.)

Mr. Shirley has ventured on a very difficult enterprise, in which his success would probably have been greater if he had been less easily satisfied both with matter and with versification. Yet one can never tell how such poems will "catch on" with children till one tries. He seems to succeed markedly better in the more advanced subjects, in which he contrives to be patriotic without taking leave of common sense.

The Schoolmasters Yearbook and Directory, 1904 (second annual issue), considerably extended (1,090 pages) and markedly improved, furnishes an immediately useful selection of educational information, including a list of 1,200 secondary schools (with numbers, fees, &c.) and biographical details about over 9,000 masters. (5s. net. Swan Sonnenschein.) We wish it a highly deserved success.

The Reformers' Year-Book (formerly the *Labour Annual*), edited by F. W. Pethick Lawrence and Joseph Edwards (1s., the *Echo*, Bride Street, E.C.), is packed full of pertinent statistics and pointed articles, with numerous photographs. Very useful for reference.

Fiscal literature is abundant. *Mr. Balfour's Pamphlet: a Reply*, by Harold Cox, Secretary of the Cobden Club (1s. net, Fisher Unwin), puts the free trade views pointedly and vigorously.—*The Fiscal Puzzle* (1d., Leng) conveniently summarizes the principal arguments advanced by leading speakers on both sides, with rough illustrations, mostly portraits.—"A Candidate" offers *Detailed Proposals for a Tariff Bill* (1d., Boltons, Knightsbridge), maintaining the paradox that all classes would benefit by *ad valorem* duties of 20 per cent. on fully manufactured, and 10 per cent. on partially manufactured, goods imported from foreign countries.—A Lecture on *The Customs System of the United Kingdom and its relation to British Commerce*, by J. A. Kempe, C.B., Deputy Chairman of the Board of Customs (3d. net, London Chamber of Commerce "Higher Commercial Education Pamphlet Series, No. 12") is a very instructive sketch of a large subject.

The second volume of the Rationalist Press Association "Extra Series" is *Haeckel's Critics answered*, by Joseph McCabe, "formerly the Very Rev. Father Antony, O.S.F., Professor of Philosophy and Ecclesiastical History at St. Antony's, Forest Gate" (6d., Watts). It is a courteous and strenuous polemic against assailants of Haeckel's "Riddle of the Universe," impressing a strong warning against ill-advised utterances on matters of such difficulty. Some of the alleged misrepresentations of Haeckel's position—by clergymen, too—seem all but incredible. Mr. McCabe, however, cites chapter and verse; and some answer is painfully necessary. Recent opinions of Dr. A. R. Wallace, Lord Kelvin, Mr. Mallock, and others are reviewed.

The Essex Education Committee have published a second account of *The Essex Field Experiments* (County Technical Laboratories, Chelmsford)—experiments conducted in 1896–1903 on tillage crops (beans, peas, wheat, barley, oats). The compilation has been made by T. S. Dymond, F.I.C., assisted by B. W. Bull, N.D.A. A tabular statement of results is given in appendix. The whole pamphlet deserves to be carefully studied by agriculturists.—Mr. T. S. Dymond has printed his Fabian Society paper on *Continental State-Aid for Agriculture* (6d., Dutton, Chelmsford), in which he deals with Denmark and (more fully) Hungary—both almost purely agricultural countries—adding the application of his inquiries to Great Britain. He urges a better systematization of agricultural education throughout the country. The paper is very instructive and opportune.

An extremely trenchant, racy, and hard-headed volume is *Letters from a self-made Merchant to his Son* (6s., Methuen), by George Horace Lorimer. "I want you to keep in mind all the time," writes the old

Digitized by Google

pork-packer of Chicago, "that steady, quiet, persistent, plain work can't be imitated or replaced by anything just as good"; and "a man's as good as he makes himself, but no man's any good because his grandfather was." He had been to Europe once himself, and this is his idea of the bearing of education on business: "I've always made it a rule to buy brains, and I've learnt now that the better trained they are the faster they find reasons for getting their salaries raised. The fellow who hasn't had the training may be just as smart, but he's apt to paw the air when he's reaching for ideas." The points are driven home with marked ability and efficiency. They ought to be exceedingly useful to beginners in all sorts of businesses. There are 18 illustrations.

NEW YEAR GIFT-BOOKS.

For Boys.

With Stanley on the Congo, by Miss Douglas (2s., Nelson), gives a fluent narrative of Congo exploration extending over eleven years (1879–89). It is a story of dogged patience and perseverance, astute management, and courageous conduct. A most interesting addition to the "Travel Series." Eight full-page illustrations.

Won in Warfare, by Charles R. Kenyon (2s. 6d., Nelson), recounts exciting adventures of a young English officer among the backwoodsmen and Red Indians of North America, and in the ranks of the Colonists fighting against England in the War of Independence. It is the heroine that is "won in warfare." A very lively story. Two illustrations by G. Leslie Hunter.

Tales of St. Austin's, by P. G. Wodehouse (3s. 6d., Black), consists of some sixteen stories, almost all reprints from the *Captain* and the *Public School Magazine*. Boys will like them. Twelve full-page illustrations.

Jake, by Adela Frances Mount (1s. 6d., Nelson), is a rather pathetic story of a London waif, a boy of fourteen, who had drifted up from Birmingham, where he had started life as a workhouse baby. He is a good fellow, though, and contrives to look after a little girl and boy left alone in the world, as well as to get on a bit himself. Two coloured illustrations.

Timothy's Quest, by Mrs. Wiggin (1s., Gay & Bird), is a "popular edition" (in paper covers) of a very charming and clever story, told with great humour and sympathy.

For Girls.

Mark's Princess, by Mrs. Edwin Hohler (1s. 6d., Nelson), is a holiday tale of four brothers, who convert a smuggler's cave into a "palace" of their imagination, and elect a little girl visitor as "Princess." A pleasant and amusing story. Numerous illustrations by Rosa C. Petherick.

Dorothy's Difficulties, by M. C. Cordue (1s. 6d., Nelson), is "a story for children." Dorothy is the eldest of four orphan children, and her difficulties arise from her wilfulness in the task of looking after her brother and sisters. The second half of the volume is concerned with "Dorothy and the others." It will be found interesting, and not a little suggestive, to youngsters. Two coloured illustrations.

The Little Brown Linnet, by Sheila E. Braine (1s., Nelson), tells charmingly and simply how a little girl, by a brave act, saved her father from a serious misfortune. "She wore a brown frock and pretty brown hat; her hair was brown, so were her bright eyes; and more people than one were apt jokingly to call her a brown linnet." Two illustrations.

French Gift-Books.

Messrs. Hachette offer a variety of attractive volumes, beautifully printed and handsomely got up. *Mon Journal* for 1902-03 (10 fr.) fully maintains its high reputation as a miscellany of interest for children of eight to twelve, with countless clever illustrations in colours and in black and white. Elder readers, too, will find many of the varied contents sufficiently engaging. For these, however, the publishers make more special provision in the fifth annual volume of *Lectures pour Tous* (9 fr.)—"revue universelle et populaire"—1,124 pages, with an abundance of capital illustrations. The papers are instructive on a wide variety of subjects of interest, and they are written with simplicity and verve alike. With the spread of the study of French, these popular journals ought to be better known in this country. They would be helpful and stimulating to all learners.

Une Dette de Cœur, by Julie Borius, with forty-two illustrations (many of them full-page), belongs to the "Bibliothèque des Ecoles et des Familles" (3 fr.)—a simple story of a boy of eleven, an orphan, and his relatives, guardian, and friends, chiefly in Brittany, with boyish escapades, and later complexities of a more sober nature.—Similar in form, and of the same series, is *La Louisiane*, by Eugène Guénin, Lauréat de l'Académie Française, with sixty-eight illustrations and two maps (4 fr.)—a most interesting popular history of the "colonie perdue," with all the romance and the hardships of exploration and the difficulties of colonial government.—A third of the series is *L'Ouragan*, by Melandri, with thirty-six illustrations after A. Paris (3 fr.)—a story interwoven with startling aerial adventures. The series is spaciously printed and gorgeously got up.

La Gondole Fantôme, by Gustave Toudouze with fifty-two illustrations (many of them full-page) by Vogel (10 fr.), is a story of the year 1797. As the title indicates, the scene is laid in Venice, and the action turns on a mystery: "Ce fut notre grande ancêtre, le gondolier Marco Fano, dont l'embarcation conduisit le doge [Marino Faliero] à la Piazzetta, à travers la tempête, et le fit débarquer entre les deux colonnes où se font les exécutions, lieu fatal et funeste. . . . Depuis, cette gondole meurtrière, gardée dans notre famille comme une redoutable relique, s'est transmise de génération en génération, sans jamais sortir de l'héritage des Fano. . . . Fatale aux autres, fatale à tous, elle te serait funeste également. . . . C'est la fantôme d'un passé sanglant!" The conflicting political ideas of the time are ingeniously interwoven with interesting private episodes, but quite in subordination to the story.

La Mission de Geneviève, by B.-A. Jeanroy, with fifty-two illustrations (a number of them full-page), by Tofani (6 fr.), is the story of a family difficulty, the scene being mostly in France, partly in Italy. Geneviève's father and mother have long been separated, and she has been brought up in the belief that her mother is dead, but gradually apprehends that she is alive. "Ce que je voudrai à présent de toutes mes forces, pensait elle, c'est réconcilier papa et maman" (page 64). A very pretty story, cleverly and pleasantly developed.

L'Eau Dormante, by Blanche Legrand (5 fr.), with fifty-four illustrations, belongs to the "Petite Bibliothèque de la Famille," and is daintily got up. An old legend, which is sufficiently startling, forms a background for a modern romance, deftly narrated and interesting throughout, with the anticipated issue.—Another pretty volume of the same series is *Les Vaines Promesses*, by Madame Lescot, with forty-eight illustrations after M. S. Macchiati. There is question of marrying and of pride of birth.

Mlle. G. du Planty again contributes to the "Bibliothèque Rose Illustreé" a charming story, *L'Oncle Bonasson*, with fifty illustrations by Ed. Zier (3.50 fr.). It will delight the children and amuse the elders. The situations are simple, natural, and humorous, and the dialogue is bright and clever. The moral lecture is rather obtrusive, but that can readily be skipped.

Les Aventures de Jeannot-Lapin, which "font depuis longtemps la joie des jeunes créoles de la Louisiane"—text by Mr. F. W. Dawson, and illustrations by R de la Nézière—are certainly very amusing (75 c.). —*Belles Dames en Grandes Toilettes* (2 fr.) text by Aristide Fabre, and historical illustrations, beautifully coloured, by Job, is also amusing and picturesque.

Various.

Messrs. Macmillan issue in their dainty "Cranford Series" a beautiful edition of Fanny Burney's *Evelina*, with an introduction by her deft biographer, Mr. Austin Dobson, and with seventy-five graceful and charming illustrations by Mr. Hugh Thomson.

"*Clear Round!*" is "a story of world travel," by E. A. Gordon, in a third edition, revised and enlarged (Sampson Low, Marston, & Co.'s "Library of Adventure and Travel"), with thirty-five capital illustrations, mostly full-page, and an excellent map of the Canadian-Pacific Route. It is fluent, entertaining, and instructive; and it would make a delightful home companion to the geography lesson.

Mr. Robert Bird, who has already written interesting books upon Biblical characters and episodes, presents *A Hundred Bible Stories for Children* (5s., Nelson) in a handsome quarto volume, with about 120 capital illustrations, a dozen of which are in colour and full-page size. The text is simple, and the type is large and agreeable.—*Favourite Stories from Grimm*, retold by Edward Shirley (5s., Nelson), printed very spaciously and plentifully illustrated in colour (full-page) and in black and white, will bring joy to all little readers.

A sufficiently "Oogley Oo" Book is *Miss Bounce*, by S. C. Woodhouse, M.A. (Oxon.), with twenty-four coloured illustrations by Gerald Sichel, depicting the history of the reformation of that "spirited child" (1s. net, Swan Sonnenschein). "Your tongue is too long and your temper too short." "But little by little the discipline told." Some of the details seem rather Oxonian for youngsters.

The Boys' and Girls' Companion (2s.) and *The Church-Worker* (Church of England Sunday School Institute) are annual volumes of well known papers, always interesting to those to whom they are addressed.

The *Christmas Numbers* of *The Boy's Own Paper* and the *Girl's Own Paper* (4 Bouverie Street, E.C.) are bright and attractive, and will be much appreciated.

Messrs. Collins offer a great variety of delightful picture-books for quite young children. For example: *Happy Days at the Farm*, *Nursery Rhymes* (old favourites and new pictures), *Sea Breezes*, *Playtime A B C* (the two last in the "Untearable Series"), *Dolly Dimple* and other stories (in the "Stiff-Board" Series), and *Soldiers All*. The illustrations are appropriate and well drawn and coloured (except that in "Dolly Dimple" they are mostly in black and white); and in "Nursery Rhymes" and "Playtime A B C" they are exceptionally good. The three first mentioned cost 1s. each; the other three only 6d. each. These series are bound to be general favourites.

OXFORD UNIVERSITY PRESS.

The Logic of Arithmetic. An attempt to show how the beginnings of Arithmetic—indeed of all the Mathematical Sciences—may be taught rationally, without producing the "mathematical rickets and logical paralysis," which the authoress asserts to be the result of teaching abstractions to beginners by means of formulae and rules of thumb. By Mrs. BOOLE. Crown 8vo, cloth, 2s.; interleaved with writing paper, 3s.

Experimental and Theoretical Course of Geometry. By A. T. WARREN, M.A. With or without Answers. Crown 8vo, cloth, 2s.

Geometry for Beginners. An Easy Introduction to Geometry for Young Learners. By G. M. MINCHIN, M.A. Extra fcap. 8vo, stiff covers, 1s. 6d.

Notes on Analytical Geometry. An Appendix. By A. CLEMENT JONES, M.A., Ph.D. Crown 8vo, cloth, 6s. net.

Oxford Magazine: "Dr. Clement Jones's useful volume merits the attention of all who are reading for college scholarships, or for Moderations. It will serve as a supplement or an appendix to any of the ordinary text-books, suggesting and illustrating methods for which the writers may have found it impossible to make room."

Horace. Vol. II.—**The Satires, Epistles, and De Arte Poetica.** With a Commentary by E. C. WICKHAM, D.D. Crown 8vo, cloth, with a Map, 6s.

Horace for English Readers. Being a Translation of the Odes, Satires, and Epistles of Horace into literary English which yet does not become mere paraphrase. By E. C. WICKHAM, Dean of Lincoln. Extra fcap. 8vo, cloth, 3s. 6d. net.

The Four Socratic Dialogues of Plato: viz., Euthyphro, Apology, Crito, Phaedo, in BENJAMIN JOWETT'S Translation, with an Introduction by EDWARD CAIRD, the present Master of Balliol College. Extra fcap. 8vo, uniform with "Horace for English Readers," 3s. 6d. net.

Aeschylus: Persae. With Introduction and Notes by A. SIDGWICK, M.A. Extra fcap. 8vo, cloth, 3s.

Aeschylus: Septem contra Thebas. With Introduction and Notes by the same Editor. Extra fcap. 8vo, cloth, 3s.

Selections adapted from Xenophon. Scenes from Greek History from Arginusae to Mantinea. With English Notes by J. SURTEES PHILPOTTS, B.C.L. New Edition. Extra fcap. 8vo, cloth, with 10 Illustrations and 1 Map, 3s. 6d.

OXFORD CLASSICAL TEXTS.—LATEST VOLUMES.

Demosthenis Orationes. Tom. I. By S. H. BUTCHER. Paper covers, 4s.; limp cloth, 4s. 6d.

Plauti Comoediae. Vol. I. By W. M. LINDSAY. Paper covers, 5s.; limp cloth, 6s.

Companion to English History. Middle Ages. With over 400 Illustrations. Edited by F. P. BARNARD, M.A. Crown 8vo, cloth, 8s. 6d. net.

With contributions by Rev. A. Galton, M.A.; J. A. Gotch, F.S.A.; C. W. C. Oman, M.A., F.S.A.; A. Hartshorne, F.S.A.; the Editor; M. Oppenheim; Miss Lucy Toulmin Smith; George Townsend Warner, M.A.; Rev. Augustus Jessopp, D.D., F.S.A.; I. S. Leadam, M.A.; R. S. Rait, M.A.; and G. McN. Rushforth, M.A., F.S.A.

Pilot: "Every section of this book will be found helpful by students, while its illustrations serve both for pleasure and profit. So much has been done of recent years to popularize the study of classical archaeology that a book like this which diffuses knowledge of how our own mediaeval ancestors lived and worked and fought and thought deserves a hearty welcome."

School History of England down to the death of Queen Victoria. With Maps, Plans, and Bibliographies. By O. M. EDWARDS, R. S. RAIT, H. W. C. DAVIS, G. N. RICHARDSON, A. J. CARLYLE, and W. G. POGSON SMITH. Crown 8vo, cloth, 3s. 6d.

Origin and Growth of English Colonies. A History of early European Colonizing Efforts, their causes, aims, and results: showing by a historical sketch how and why English colonies flourished while those of other nations perished or became English; ending with a concise survey of the tendency of modern forces, and of the problems which press for solution at the present day. By HUGH E. EGERTON. Crown 8vo, with 8 Maps, 3s. 6d.; or in a cheaper binding, 2s. 6d.

A Brief History of the Indian Peoples. By the late Sir W. W. HUNTER, K.C.S.I. Revised and Continued to the Coronation Darbár of 1903 by the Rev. W. H. HUTTON, B.D. New and Enlarged Edition. Eighty-ninth Thousand. Crown 8vo, cloth, 3s. 6d.

John Bull in France: Being the description in French and English of an Englishman's Trip to France, the Conversations into which he enters with Porters, Hotel-keepers, Post Office Clerks, Shopmen, &c., and his Expeditions in the company of his Niece, who is at School in Paris. The book also contains Useful Lists of French Foods, Drinks, Articles of Clothing, Weights and Measures, &c. By LEON DELBOS, Instructor in French in the "Britannia." Fcap. 8vo, 2s.; on Oxford India Paper, 2s. 6d.

Schoolmaster: "A contrast to the stilted twaddle and impossible dialogues of the ordinary conversation book for travellers . . . They are real dialogues, and, in the hands of a capable teacher, they will go farther towards the acquisition of a fluent command of real everyday French than a library full of the ordinary 'Guides to French Conversation.' Mr. Delbos knows, too, how to make learning amusing. . . . It is a book to be strongly recommended."

A Concise French Grammar, including Phonology, Accidence, and Syntax, with Historical Notes for use in Upper and Middle Forms. By ARTHUR H. WALL, M.A. Crown 8vo, cloth, 4s. 6d.

A History of French Versification. By L. E. KASTNER, M.A. Crown 8vo, cloth, gilt top, 5s. 6d. net.

Kinderfreuden: A Description of the Home Life of Three Little Boys, given by one of them. Printed in fine German type, with 12 Illustrations. Crown 8vo, cloth, 1s. 6d.

Poems of English Country Life. Selected and Edited, with Introduction and Notes, by H. B. GEORGE, M.A., and W. H. HADOW, M.A. Crown 8vo, cloth, 2s.

Shelley's Adonais. Edited, with Introduction and Notes, by WILLIAM MICHAEL ROSSETTI. Second Edition revised with the assistance of A. O. PRICKARD, M.A., greater attention having been paid to the classical sources from which many passages and ideas in "Adonais" are derived, and a freer use has been made of parallel passages from various authors, ancient and modern. Crown 8vo, cloth, 5s.; or in a cheaper style, 3s. 6d.

Gower. Selections from the Confessio Amantis. Edited, with Introduction, Notes, and Glossary, by G. C. MACAULAY, M.A. With a Frontispiece. Fcap. 8vo, cloth, 4s. 6d.

Manuals of the New Testament. By the late Dr. STOKOE. Crown 8vo, cloth.

The Four Gospels. With Maps, 3s. 6d. Or, separately, Part I, The Gospel Narrative, 2s.; Part II, The Gospel Teaching, 2s.

Manuals of the Acts. 3s.

The Life and Letters of St. Paul. 3s. 6d. Or, separately, Part I, The Life of St. Paul, 2s. Part II, The Letters of St. Paul, 2s.

First Days and Early Letters of the Church. 3s. Or, Part I, First Days of the Church, 1s. 6d. Part II, Early Letters of the Church, 2s.

From Mr. Murray's
Educational List.

JUST PUBLISHED.

A FIRST LATIN-ENGLISH DICTIONARY.
By A. C. AINGER, M.A., Assistant Master at Eton. Large crown 8vo, price 2s. 6d.

ENGLISH.

Mr. J. W. HEADLAM *says*:—"In the teaching of French there is at least hope and promise for the future. In English subjects this is not the case. In a very large number of schools the teaching has not yet reached that stage at which criticism begins to be useful or possible. The very first elements of good work are absent. The instruction is based exclusively on text-books. The masters have no knowledge on the subject except what they gain from the book which the boys use. They therefore make no attempt to supplement, correct, and select from or explain the information given in these books, though the statements made are necessarily unintelligible unless further information is available. . . . The result is that it is no uncommon thing for a bright and intelligent boy to leave school at the age of sixteen or seventeen without ever having had an opportunity of becoming acquainted with any book except the text-books written purely for school purposes. At the best he will have read a poem of Scott and a play of Shakespeare for examination, and . . . in many schools the boys are quite ignorant of the most well known English verse. . . . They are not introduced to the world of books and literature. They are not taught to read for pleasure; they are not taught how to use books so as to extract information from them. . . . The boy has no acquaintance with the English language as used by those who know how to use it, and it is not surprising that when he attempts to express himself on paper or orally he has little skill or facility." —*Board of Education Reports.*

ESSAY WRITING FOR SCHOOLS. A Practical Exposition of the Principles of this form of Composition. Illustrated by Models and by Examples drawn from the English Classics, and designed to meet the requirements of the Public Examinations. By L. COPE CORNFORD, Author of "English Composition: a Manual of Theory and Practice." Crown 8vo, price 4s. 6d.

"Can young people be taught to write essays? Unquestionably they can, and by no method better than that provided by Mr. L. Cope Cornford."—*Globe.*

STUDENT'S MANUAL OF ENGLISH LITERATURE. A History of English Literature and of the chief English Writers founded upon the Manual of THOMAS B. SHAW. By A. HAMILTON THOMPSON, B.A., late Minor Scholar of St. John's College, Cambridge. Crown 8vo, price 7s. 6d.

"We have not detected a single case in which anything of importance has been passed over. In point of criticism it is as sound as it is trustworthy with regard to facts, and, so far, at least, as a necessarily cursory examination enables us to judge, the student may accept its literary judgments with perfect confidence . . . Nor, though primarily intended for students, is it to them alone the work appeals. No lover of English literature can fail to find it interesting; and his knowledge of the subject must be encyclopædic indeed if he does not find it instructive as well." —*Glasgow Herald.*

CHEAP RE-ISSUE.

THE ENGLISH NOVEL. Being a Short Sketch of its History from the Earliest Times to the appearance of "Waverley." By WALTER RALEIGH, Professor of English Literature, at the University of Glasgow; Author of "Milton," "Wordsworth," &c. Crown 8vo, price 2s.

EXTRACT FROM PREFACE.

"The aim is critical and historical; to furnish studies of the chief English novelists before Scott, connected with certain general lines of reasoning and speculation on the nature and development of the novel."

INTRODUCTION TO POETRY: Poetic Expression—Poetic Truth—The Progress of Poetry. By LAURIE MAGNUS, M.A., Magdalen College, Oxford. Fcap. 8vo, price 2s.

". . . . From beginning to end it is excellent, and the delightful style, the breadth and incisiveness of view, the sidelights which it opens upon life and thought, and the frequently deep philosophy which is attractively veiled in the author's persuasive rhetoric, make it at times fascinating." —*School World.*

STUDENT'S SPECIMENS OF ENGLISH LITERATURE. Selected from the Chief English Writers, and arranged chronologically. By THOMAS B. SHAW, M.A., Author of the "Student's Manual of English Literature." Edited with Additions, by Sir WILLIAM SMITH, D.C.L. Crown 8vo, price 5s.

EXTRACT FROM SIR WILLIAM SMITH'S PREFACE.

"Two objects have been kept chiefly in view: first, the illustration of the style of each writer by some of the most striking or characteristic specimens of his works; and, secondly, the choice of such passages as are suitable, either from their language or their matter, to be read in schools or committed to memory."

A PRIMARY ENGLISH GRAMMAR. With 184 Exercises and Questions. By THEOPHILUS D. HALL, M.A. Third Impression of the Fourteenth Edition. 16mo, price 1s.

"This little book, expressly adapted for beginners, is as plain and simple in style as possible. It is drawn up throughout in accordance with the views of our most recent grammars, and the child who begins with it will have nothing to unlearn, and no false impressions to correct when he passes on to larger works on the subject."—*Educational Times.*

MATHEMATICS.

15353. (H. B. Reynolds.)—In a house are two cisterns respectively 3 ft. cube and 4 ft. cube. It is required to replace these by two new cube cisterns, one less than 3 ft. cube, the other more than 4 ft. cube, so that the two new ones may together contain the same as the two original ones, *i.e.*, 91 cubic feet. The answer must be exact in vulgar fractions—not an approximation in decimals.

Solution by D. Biddle.

Let $(a-v)^3+(b+v)^3=a^3+b^3$, where $a<b$, and, of necessity, $u>v$. The answer being required in exact vulgar fractions, let z be the L.C.M. of the denominators of u and v, and let $u=x/z$, $v=y/z$. Then we obtain

$$(az-x)^3+(bz+y)^3=(a^3+b^3)z^3 \quad \ldots\ldots(1),$$

whence $x^3-y^3+3bz(x^2-y^2)+3b^2z^2(x-y)=3(a+b)xz\{x+(b-a)z\}$...(2)

and

$$\{(a+b)z-(x-y)\}\{(az-x)^2-(az-x)(bz+y)+(bz+y)^2\}=(a^3+b^3)z^3 \ldots(3).$$

From (2), we have $x^3-y^3\equiv 0 \pmod{3z}$.....(4)

and $3(a+b)xz\{x+(b-a)z\}\equiv 0 \pmod{x-y}$ .....(5).

From (3), we have $(a^3+b^3)z^3\equiv 0\{\text{mod }(a+b)z-(x-y)\}$ .....(6),

whence $(a^2-ab+b^2)z^2(x-y)\equiv 0\{\text{mod }(a+b)z-(x-y)\}$.....(7).

Taking (4), let $x-y=n$. Then x^3-y^3 becomes $3nx^2-3n^2x+n^3$, and, since 3 divides the whole, it divides n. Let $n=3n_1$; then, from (3) and (7), we have

$$x^2-3n_1x+3n_1^2+\{(b-a)x-(2b-a)n_1\}z=\frac{(a^2-ab+b^2)n_1z^2}{(a+b)z-3n_1} \quad \ldots(8).$$

From (5), we now have $(a+b)xz\{x+(b-a)z\}\equiv 0 \pmod{n_1}$.....(9).

From (8) and (9), $zx\equiv 0 \pmod{n_1}$ .....(10),

whence also $zy\equiv 0 \pmod{n_1}$ .....(11).

In the present case n_1 is a factor of x and of y, but this does not appear to be necessary. It must not be supposed, moreover, that n_1 enters into the composition of z as well as x and y, for, if such were the case, u and v would not be reduced to their lowest terms.

Now, if we regard the cubes as varying gradually whilst their sum remains constant, the differential calculus teaches us that the infinitesimal element first taken from the edge of the smaller cube will bear to that first added to the edge of the larger the inverse ratio $3b^2:3a^2$. Therefore we are not surprised to find that the common denominator of the required (exact) fractions is closely related to $3(b^2-a^2)$, and in the case before us this is the actual value of z; also, since $b-a=1$, z here $=3(a+b)$. But it is possible that in some cases z may be a multiple, or on the other hand a factor, of $3(b^2-a^2)$. Or it may occur, as indicated by (8), that z divides $x^2-3n_1x+3n_1^2$, although in the present case they only have a common factor. But in all cases, since $x^3-y^3=9n_1(x^2-3n_1x+3n_1^2)$, we have, by (4), $3n_1(x^2-3n_1x+3n_1^2)\equiv 0 \pmod{z}$.....(12),

and, by (8), $3(a^2-ab+b^2)n_1^2z\equiv 0\{\text{mod }(a+b)z-3n_1\}$ .....(13),

which should be taken in conjunction with (7). Let

$$(a^2-ab+b^2)n_1z^2=\lambda\{(a+b)z-3n_1\} \quad \ldots\ldots(14)$$

and $3(a^2-ab+b^2)n_1^2z=\mu\{(a+b)z-3n_1\}$ .....(15).

Then $\lambda:\mu=z:3n_1$, and we obtain

$$(a+b)\lambda-\mu=(a^2-ab+b^2)n_1z \quad \ldots\ldots(16),$$

and it is clear, from (14) and (15), that

$$3(a^2-ab+b^2)n_1z\equiv 0\{\text{mod }(a+b)z-3n_1\} \quad \ldots\ldots(17),$$

which is an advance upon both (7) and (13). Let

$$3(a^2-ab+b^2)n_1z=\rho\{(a+b)z-3n_1\} \quad \ldots\ldots(18);$$

then $n_1\rho=\mu$, whilst $z\rho=3\lambda$, whence, by (16),

$$\rho^2=3(a^2-ab+b^2)\lambda\mu/\{(a+b)\lambda-\mu\} \quad \ldots\ldots(19).$$

In the present case $\rho=\frac{1}{3}n_1z$, and, since $z=3(a+b)$, we have

$$n_1=(a+b)^2-3(a^2-ab+b^2).$$

But, in (12), take $3n_1(x^2-3n_1x+3n_1^2)=mz$ .....(20);

then $x=\{(12mn_1z-27n_1^4)^{\frac{1}{2}}+9n_1^2\}/(6n_1)$ .....(21),

whilst $y=\{(12mn_1z-27n_1^4)^{\frac{1}{2}}-9n_1^2\}/(6n_1)$ .....(22).

In the present case $m=n_1^3$, giving $x=40$, $y=10$, with $z=21$, n_1 being 10. Hence the required internal measurements of the new cisterns are $1\frac{3}{21}$ ft. and $4\frac{10}{21}$ ft. respectively.

15409. (H. S. Vandiver.)—*A certain Aspect of* Fermat's *Theorem.*—If a is any given positive integer, then there is an infinity of composite integers M (each containing more than one distinct prime factor) such that $a^M\equiv a \pmod{M}$. For example, if $a=2$, then $M=11.31$, 17.257, 23.89, ... If $a=3$, then, $M=7.13$, 11.61, ...

Solution by Lt.-Col. Allan Cunningham, R.E.

Raise the given a to any power ξ, and find two proper (unequal) prime factors (say, p, q) of $(a^\xi-1)$ so that $a^\xi\equiv 1 \pmod{p}$ and $\pmod{q}$, and therefore also $\pmod{pq}$, where $p=m\xi+1$, $q=n\xi+1$. Here

$$pq=(mn\xi+m+n)\xi+1.$$

But $(a^\xi)^{mn\xi+m+n}\equiv 1 \pmod{pq}$; therefore $a^{pq-1}\equiv 1 \pmod{pq}$ and

$$a^{pq}\equiv a \pmod{pq}.$$

15365. (Professor Sanjána, M.A.)—In a parabola PQ is the normal chord at P, and AN the abscissa of P. If P_1P and P_2P are also normal chords, prove that $P_1P.P_2P=PQ.AN$.

Solutions (I.) *by* R. F. Davis, M.A.; (II.) *by* R. Tucker, M.A.; (III.) *by* H. J. Woodall, A.R.C.S.

(I.) Let the tangents at P_1, P_2 intersect in T. Then it may be shown that ST is collinear with, and equal to, SY, the perpendicular from S on the tangent at P. Hence $SP_1.SP_2=ST^2=SY^2=SA.SP$. Moreover, $AN_1.AN_2=4SA^2$. The normal chord PQ at $P=4SP^{\frac{3}{2}}.SA^{\frac{1}{2}}/AN$. Hence the relation as stated.

(II.) Let P, P_1, P_2 be the three points m, m_1, m_2; then

$$m+m_1+m_2=0 \quad \ldots\ldots(1).$$

Then PQ, being a normal chord, is the join of m, $-(m^2+2)/m$; therefore its length $=4a\sqrt{(m^2+1)^3}/m^2$ .....(2).

$$\begin{aligned}PP_1.PP_2&=\sqrt{[(m^2-m_1^2)^2+4(m-m_1)^2]}\sqrt{[(m^2-m_2^2)^2+4(m-m_2)^2]}\,a^2\\&=(m-m_1)(m-m_2)\sqrt{[(m_1^2+4)(m_2^2+4)]}\,a^2 \text{ by (1)}\\&=2(m^2+1)\sqrt{[m_1^2m_2^2+4(m_1^2+m_2^2)+16]}\,a^2\\&=4(m^2+1)^{\frac{3}{2}}a^2;\end{aligned}$$

because $m_1m_2=2$, since the conormal point is P (see *Co-normal Points on a Parabola*, § 15, Y $=2am$, and also $=amm_1m_2$); therefore

$$P_1P.P_2P=AN.PQ.$$ [Rest in Vol.]

12880. (Professor Matthews, M.A.)—Prove that

$\tan^{-1}\frac{1}{4}+\tan^{-1}\frac{1}{9}+\tan^{-1}\frac{1}{16}+\ldots$ ad inf. $=\tan^{-1}(-\tanh\pi/\sqrt{2}\cot\pi/\sqrt{2})$, when all the $(\tan^{-1})$'s are to be taken between 0 and $\frac{1}{2}\pi$; and verify this result numerically, so as to show the equality of the two expressions within 1 degree of angle.

Solutions (I.) *by* Professor Sanjána, M.A.; (II.) *by* F. P. Andersen.

(I.) In the identity $\sin\alpha=\alpha\Pi_1^\infty(1-\alpha^2/n^2\pi^2)$, suppose α to be the complex number $x+\iota y$. Taking logarithms, we get

$$\log(\sin x\cosh y+\iota\cos x\sinh y)=\log(x+\iota y)+\Sigma_1^\infty\log\left(1-\frac{x^2-y^2}{n^2\pi^2}-\iota\frac{2xy}{n^2\pi^2}\right).$$

Taking principal values only, we have the imaginary part on the left $=\iota\tan^{-1}(\tanh y\cot x)$; that on the right

$$=\iota\tan^{-1}\frac{y}{x}+\iota\Sigma_1^\infty\tan^{-1}\frac{-2xy}{n^2\pi^2-x^2+y^2}.$$

Put $x=y=\pi/\sqrt{2}$, and cancel ι:

$$\begin{aligned}\tan^{-1}(\tanh\pi/\sqrt{2}\cot\pi/\sqrt{2})&=\tan^{-1}1+\Sigma_1^\infty\tan^{-1}(-1/n^2)\\&=-\tan^{-1}\tfrac{1}{4}-\tan^{-1}\tfrac{1}{9}-\tan^{-1}\tfrac{1}{16}\ldots \text{ ad inf.},\end{aligned}$$

which is the required result.

(II.) $$\Sigma_1^\infty\tan^{-1}\frac{1}{n^2}=\tan^{-1}\frac{S_1-S_3+S_5\ldots}{1-S_2+S_4\ldots}$$

where $S_m=$ sum of products of such quantities as $1/n^2$ taken m together.

Now $$\theta-\frac{\theta^3}{3!}+\frac{\theta^5}{5!}\ldots\equiv\theta\left(1-\frac{\theta^2}{\pi^2}\right)\left(1-\frac{\theta^2}{2^2\pi^2}\right)\ldots$$

$$\equiv\theta\left[1-\frac{\theta^2}{\pi^2}S_1+\ldots+(-1)^n\frac{\theta^{2n}}{\pi^{2n}}S_n\ldots\right].$$

Hence, equating coefficients of θ^{2n+1}, $S_n/\pi^{2n}=1/(2n+1)!$; therefore

$$\Sigma_1^\infty\tan^{-1}\frac{1}{n^2}=\tan^{-1}\frac{\pi^2/3!-\pi^6/7!+\pi^{10}/11!\ldots}{1-\pi^4/5!+\pi^8/9!\ldots}=\tan^{-1}\frac{N}{D}, \text{ say.}$$

Then $$\begin{aligned}D+\iota N&=1+x^2/3!+x^4/5!+x^6/7!\ldots \qquad [x=\pi(1+\iota)/\sqrt{2},\\&=\sinh x/x \qquad\qquad x^4=-\pi^4]\\&=\frac{1-\iota}{\pi\sqrt{2}}(\sinh\pi/\sqrt{2}\cos\pi/\sqrt{2}+\iota\sin\pi/\sqrt{2}\cosh\pi/\sqrt{2}).\end{aligned}$$

$$N/D=(1-\tanh\pi/\sqrt{2}\cot\pi/\sqrt{2})/(1+\tanh\pi/\sqrt{2}\cot\pi/\sqrt{2}).$$

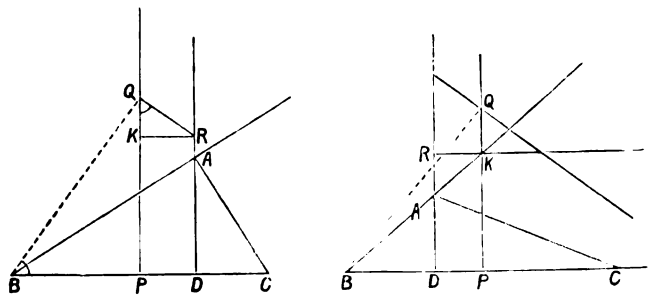
Now given series $=\tan^{-1}N/D-\frac{1}{4}\pi=\tan^{-1}(-\tanh\pi/\sqrt{2}\cot\pi/\sqrt{2})$.

15348. (Rev. T. Wiggins, B.A.)—ABC is a triangle, and P is the middle point of BC. Draw AD at right angles to BC and from P draw PQ parallel to DA, so that Q and A are on the same side of BC. Let $2PQ=AB+AC$. Draw QR to meet DA in R, so that the angles PQR and QBP are equal. Show that RD is equal to one of the sides AB, AC.

Digitized by Google

Solutions (I.) *by* R. Tucker, M.A.; (II.) *by* A. M. Nesbitt, M.A., W. H. L., *and* B. C. Wallis, F.C.P.

(I.) Through R draw RK parallel to BC; then the triangles RQK,



QBP are similar; therefore $QK/KR = BP/QP = a/(b+c)$, and

$$KR = (c^2 \sim b^2)/2a;$$

therefore $QK = (c^2 \sim b^2)/2(b+c) = \frac{1}{2}(c \sim b)$; therefore &c.

(II.) Since

$\angle PQR = \angle QBP = \angle QCP$,

QR is perpendicular to QC; therefore, if DV be parallel to QR, $CP : PQ = VP : PD$. Now

$CD^2 - BD^2 = CA^2 - BA^2 = 2DP.BC$.

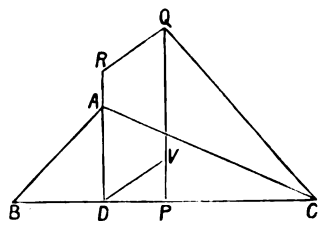
But $CA + AB = 2QP$,

$CA - AB = 2(QP - AB)$;

whence

$QP^2 - QP.AB = DP.PC = QP.PV$;

therefore $QP - AB = PV$; therefore $QV = RD = AB$.



15379. (Rev. Prebendary Whitworth, M.A.)—In how many different orders can the eight digits 3, 3, 3, 3, 7, 7, 7, 7 be arranged so as to express a number divisible by 37?

Solution by Lt.-Col. Allan Cunningham, R.E.

The following numbers evidently contain 37 as a factor—37, 333, 777, 703, 7733, 700003, 30000007, 30007.

Hence the following multiples of 37 can be formed:—(1) 37373737; (2) 77337733 (unique); 6 arrangements of 37, 333, 777; 3 arrangements of 37, 37, 7733; (1) 37773337; (2) 33737377 (unique)—*Total*, 13.

Note.—The Proposer remarks that the arrangement 37773337 is counted twice, for it is one of the arrangements of 37, 37, 7733, and is also mentioned by itself; he has also found six other arrangements which bring the total number up to 18, viz.: 33777337, 37337773, 37733377, 37737373, 73337737, 73737337.

8712. (Professor Schoute.)—A surface S of the third order passing through two non-coplanar lines a and b is given, and a line l intersects a in A, b in B, and S for the third time in C, under the condition AC = CB. Find (1) the locus of the line l, and (2) its intersection with the given surface S.

Note by A. M. Nesbitt, M.A.

The plane which bisects at right angles the line which is perpendicular to both the given lines a, b will also bisect every line l which cuts both; hence the cubic surface S must break up into this plane and a quadric, *i.e.*, a hyperboloid of one sheet of which a and b are non-intersecting generating lines. It appears clear that a straight line which joins two random points on a couple of random generating lines (belonging, however, to the same system) of any given hyperboloid will be too unrestricted in its movements to trace out any locus at all; and, further, that its intersections with the given surface S will comprise every point in the two lines a, b and such points as are collinear with them in the plane referred to. If we take $y = mx$, $z = c$ and $y = -mx$, $z = -c$ for the lines a, b respectively, the "third intersections" of l and S will all lie in the plane of xy; and, moreover, if α, β be the x co-ordinates of A and B, the co-ordinates of C will be $\{\frac{1}{2}(\alpha+\beta), \frac{1}{2}[m(\alpha-\beta)], 0\}$. By properly choosing α and β (which are quite unrestricted) the point C may be made to take up any position at pleasure on the plane $z = 0$.

Note on the Graphic Solution of Simultaneous Equations in three Unknowns.

By B. C. Wallis, F.C.P.

Take the x, y, and z axes at right angles and imagine the y axis swung downwards through a right angle so that YO and OZ are one straight line. Then an equation of the form $ax + by + cz = d$ is represented by a plane which cuts the plane of OX and OZ at the line $y = 0$, $ax + cz = d$; the plane of OX and OY at the line $z = 0$, $ax + by = d$: and the plane of OY and OZ at the line $x = 0$, $by + cz = d$.

An equation of the form $x^2 + y^2 + z^2 = a$ is represented by the surface of the sphere which has its centre at the origin and radius $\sqrt{a}$; and an equation $x^2 - 2ax + y^2 - 2by + z - 2cz = d - a^2 - b^2 - c^2$ by the surface of a sphere centre (a, b, c) and radius $\sqrt{d}$.

An equation of the form $x^2 + y^2 = a$ is represented by the surface of a cylinder of which OZ is the axis and $\sqrt{a}$ the sectional radius: while $y^2 + z^2 = b$ has OX for axis and $\sqrt{b}$ as sectional radius.

Similarly an equation $x^2 - 2ax + z^2 - 2cz = d - a^2 - c^2$ is represented by the surface of a cylinder having an axis parallel to OY through (a, o, c) and a sectional radius $\sqrt{a}$.

Using these principles, problems of forms of which the following three are examples may be worked graphically:—

$2x + y + z = 16$, $x + 2y + z = 9$, $x + y + 2z = 3$ ..... (A):

$x^2 + y^2 + z^2 = 25$, $x + y + z = 6$, $2x + y + z = 8$ ..... (B);

$x^2 + y^2 = 25$, $x + y + z = 8$, $x + 2y + 3z = 13$ ..... (C).

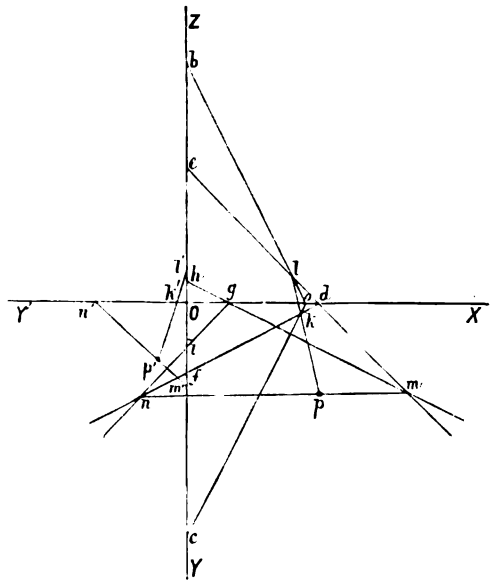


Fig. A.

Problem A.—$2x + y + z = 16$ is represented by abc, $x + 2y + z = 9$ by def, $x + y + 2z = 3$ by ghi. The intersection of abc and def is lk, of ghi and def is mn, of lk and mn is p. p gives $x = 9$. Imagine OY swung back and the whole swung through a right angle round OZ; then $l'k'$ is the new position of lk, $m'n'$ of mn, and p' of p. p' gives $y = 2$ and $z = -4$.

Solution—$x = 9$, $y = 2$, $z = -4$. [Rest in Vol.]

15434. (A. Ensor.)—Find the equation (E) whose roots are the ratios of the roots of $x^3 + px + q = 0$, and solve (E) when one root is given.

Solution by C. M. Ross.

Put $f(x) \equiv x^3 + px + q = 0$. Let $y = \beta/\alpha$ = ratio of two roots; then, since $f(\beta) = 0$, $f(y\alpha) = 0$, also $f(\alpha) = 0$. Hence the required equation is obtained by eliminating α between $f(y\alpha) = 0$ and $f(\alpha) = 0$, *i.e.*, between $y^3\alpha^3 + py\alpha + q = 0$ and $\alpha^3 + p\alpha + q = 0$. By cross multiplication $\alpha^3/[py(y-1)] = \alpha/[q(1-y^3)] = 1/[py(y^2-1)]$; therefore

$$q^2(y^2 + y + 1)^3 + p^3y^2(y+1)^2 = 0,$$

which is the required equation (E).

Again, on expanding (E), it becomes

$$q^2y^6 + 3q^2y^5 + (6q^2 + p^3)y^4 + (7q^2 + 2p^3)y^3 + (6q^2 + p^3)y^2 + 3q^2y + q^2 = 0,$$

i.e., $q^2(y^3 + 1/y^3) + 3q^2(y^2 + 1/y^2) + (6q^2 + p^3)(y + 1/y) + 7q^2 + 2p^3 = 0$,

which is a reciprocal equation. Put $y + 1/y = z$, and equation reduces to

$$q^2z^3 + 3q^2z^2 + (3q^2 + p^3)z + q^2 + 2p^3 = 0 \quad \text{.....(E')}.$$

Now, according to the Question, one root of (E) is known; but it is immaterial whether the root is considered of (E) or of (E'). Let it be of (E'); denote it by Q; then, if other roots are β and γ,

$$Q + \beta + \gamma = -3, \quad Q\beta + \beta\gamma + \gamma Q = (3q^2 + p^3)/q^2 \text{.....(i., ii.)},$$

$$Q\beta\gamma = (q^2 + 2p^3)/q^2 \text{.....(iii.)}.$$

From (i.) and (iii.), $\beta - \gamma = \{(3+Q)^2Qq^2 + 4(q^2 + 2p^3)\}^{\frac{1}{2}}/q\sqrt{Q}$;

therefore

$$\beta = \{-(3+Q)q\sqrt{Q} + [(3+Q)^2Qq^2 + 4(q^2 + 2p^3)]^{\frac{1}{2}}\}/2q\sqrt{Q}$$

and $\gamma = \{-(3+Q)q\sqrt{Q} - [(3+Q)^2Qq^2 + 4(q^2 + 2p^3)]^{\frac{1}{2}}\}/2q\sqrt{Q}$.

Digitized by Google

Again, since $\beta+\gamma = \{(3q^2+p^3)Q+q^2+2p^3\}/Q^2q^2$ by (ii.)

$= -(3+Q)$ by (i.),

$(3+Q)^2Qq^2+4(q^2+2p^3) = 3q^2(Q^2+2Q+3)-Qp^3$;

therefore the roots β and γ may be written

$$\{-(3+Q)q\sqrt{Q}\pm[3q^2(Q^2+2Q+3)-Qp^3]^{\frac{1}{2}}\}/2q\sqrt{Q}.$$

Again $x+1/x = Q$; therefore

$x = \frac{1}{2}\{-Q\pm(Q^2-4)^{\frac{1}{2}}\}$ and $x+1/x = \{-(3+Q)q\sqrt{Q}\pm m\}/2q\sqrt{Q}$;

$\therefore\ x = \{-(3+Q)q\sqrt{Q}\pm m\pm[\{-(3+Q)q\sqrt{Q}\pm m\}^2-16q^2Q]^{\frac{1}{2}}\}/4q\sqrt{Q}.$

Thus the roots of the equation (E) are $\frac{1}{2}[-Q\pm\sqrt{(Q^2-4)}]$

and $1/4q\sqrt{Q}\{-(3+Q)q\sqrt{Q}\pm m\pm[\{-(3+Q)q\sqrt{Q}\pm m\}^2-16q^2Q]^{\frac{1}{2}}\}$,

where $m^2 \equiv 3q^2(Q^2+2Q+3)-Qp^3$.

15125. (G. H. Hardy, M.A.)— Prove directly that

$$\lim_{k=1}\int_1^{1,k}\frac{du}{\sqrt{[(u^2-1)(1-k^2u^2)]}} = \tfrac{1}{2}\pi.$$

Solution by the Proposer.

Put $u^2 = \cos^2\phi+(1/k^2)\sin^2\phi$, $u\,du = (1/k^2-1)\cos\phi\sin\phi\,d\phi$, when the integral beomes $\frac{1}{k}\int_0^{\frac{1}{2}\pi}\frac{d\phi}{\sqrt{[\cos^2\phi+(1/k^2)\sin^2\phi]}}$, the limit of which for $k=1$ is $\frac{1}{2}\pi$. More generally, if $f(u)$ is continuous,

$$\lim_{k=1}\int_1^{1/k}\frac{f(u)\,du}{\sqrt{\{(u^2-1)(1-k^2u^2)\}}} = \tfrac{1}{2}\pi f(1).$$

[Indirectly the result is obvious, for the integral is known to be equal to K'.]

15411. (Rev. T. Roach, M.A.)—Prove that the series

$$\frac{1}{1.2.4.5}+\frac{1}{3.4.6.7}+\frac{1}{5.6.8.9}+\ldots = \frac{1}{36}.$$

Solutions (I.) *by* Lionel E. Reay, B.A., G. A. Carle, M.A., B.Sc. (Edin.), *and others;* (II.) *by* H. J. Woodall, A.R.C.S.

(I.) n-th term $= \frac{1}{(2n-1)2n(2n+2)(2n+3)}$. This can be written

$$\frac{1}{12}\left(\frac{1}{2n-1}-\frac{1}{2n+3}-\frac{1}{n}+\frac{1}{n+1}\right);$$

$\therefore\ 12S = (\frac{1}{1}-\frac{1}{3}-\frac{1}{4}+\frac{1}{5})+(\frac{1}{3}-\frac{1}{7}-\frac{1}{5}+\frac{1}{7})+(\frac{1}{5}-\frac{1}{9}-\frac{1}{6}+\frac{1}{8})+\ldots = \frac{1}{3}$;

$\therefore\ S = \frac{1}{36}$.

(II.) Series $= \frac{1}{3}\left(\frac{1}{1.5}-\frac{1}{2.4}+\frac{1}{3.7}-\frac{1}{4.6}+\frac{1}{5.9}-\frac{1}{6.8}+\ldots\right)$

$$= \frac{1}{3}\left[\frac{1}{4}\left(1-\frac{1}{5}+\frac{1}{3}-\frac{1}{7}+\frac{1}{5}-\frac{1}{9}+\frac{1}{7}-\frac{1}{11}+\frac{1}{9}-\frac{1}{13}+\cdots\right)\right.$$
$$\left.-\frac{1}{2}\left(\frac{1}{2}-\frac{1}{4}+\frac{1}{4}-\frac{1}{6}+\frac{1}{6}-\frac{1}{8}+\ldots\right)\right]$$

$$= \frac{1}{3}\left[\frac{1}{4}\left(1+\frac{1}{3}\right)-\frac{1}{2}\cdot\frac{1}{2}\right] = \frac{1}{36}.$$

15437. (C. E. Youngman, M.A.)—Two circles (radii R, r and distance d from centre to centre) are so placed that $d^2 = R^2+14Rr+r^2$ (r negative when $d<R$). Show that (1) any number of triads of circles mutually tangent can be drawn touching both these circles, the first at A, B, C, the second at A', B', C'; (2) $\Sigma\cot A(=k)$ and $\Sigma\cot A'(=k')$ are constants, connected by the relation $4(kk'\pm3) = 7(k\pm k')$. [When the two circles are equal $k=k'=2$ or $\sqrt{3}$; and when one of them opens into a straight line $k=\infty$ and $k'=1\frac{1}{4}$.]

Solution by R. F. Davis, M.A.

If three circles of radius a touch each other two and two, their centres form an equilateral triangle of side $2a$. From the centroid of this triangle as centre can be described two circles of radii $a(2/\sqrt{3}\pm1)$ each of which touches the three original circles, the points of contact for any one circle forming a similarly situated equilateral triangle. Hence it is always possible to describe an infinite number of triads of equal circles touching each other two and two, and also touching two given circles provided the latter are concentric and have their radii in the ratio

$$2+\sqrt{3}:2-\sqrt{3}.$$

Invert from any point and there follows the porismatic relation as stated. The triangle ABC inverts into an equilateral triangle from either of the "isodynamic" points whose distance from the circumcentre $= R[\cot\omega\mp\sqrt{3})/(\cot\omega\pm\sqrt{3})]^{\frac{1}{2}}$ (Neuberg). Since this distance is constant and R is constant, so also is ω. The relation between the Brocard angles when $d>R$ is given by

$$[(k+\sqrt{3})(k'+\sqrt{3})]/[(k-\sqrt{3})(k'-\sqrt{3})] = [(2+\sqrt{3})/(2-\sqrt{3})]^2,$$

which reduces to $4(kk'+3) = 7(k+k')$. When $d<R$ (and R encloses r)

$$4(kk'-3) = 7(k-k').$$

QUESTIONS FOR SOLUTION.

15480. (Robt. W. D. Christie.)—In the Pellian equation with any prime of form $4m+1$ and convergents p_n, q_n as usual, prove

$$(q_n)^2+(q_{n+1})^2 = q_{2n+1}.$$

E.g., $p=277$; then $22213^2+(6524)^2 = 535979945$

where $89204841182-277\cdot535979945^2 = -1$.

15481. (Lt.-Col. Allan Cunningham, R.E.)—Factorize completely

$$N = 96^{18}+1.$$

15482. (James Blaikie, M.A.)—Find two numbers of eleven digits such that in each case the square of the number is terminated by the eleven digits of the number; and show that the sum of these two numbers is necessarily $10^{11}+1$.

15483. (Professor Sanjána, M.A.)—Find in positive integers all the solutions of $13k+21l+29m+37n = 300$.

15484. (Lt.-Col. J. Hickman.)—Smith takes a number in a small sweepstakes of 100 chances at 2s. 6d. each on a race in which 12 horses are entered. After drawing he forgets the name of the horse he drew, remembering only that it began with the letter *N*. When the race has been run he learns that the name of the winner begins with an *N*. The only further light he has as to the probability of his having won is that he believes $\frac{1}{20}$ of all racers bear names beginning with *N*. Proceeding on that assumption, find the precise mathematical value of his chance if the winner is to take $\frac{2}{3}$ of the stakes.

15485. (D. Biddle.)—A point, being taken at random in each of two sides of a square, is joined to the extremities of the side which is respectively opposite. Find the mean area of that portion of the square which lies between both pairs of lines so drawn, when the sides selected for the random points are (1) opposite, (2) contiguous.

15486. (C. M. Fordick.)—If n points are taken at random on a circumference of length C, what is the probability that an arc of length C/p can be found which will cover r or more of the points?

15487. (A. M. Nesbitt, M.A.)—Resolve into factors

ST. THOMAS'S HOSPITAL
MEDICAL SCHOOL,

ALBERT EMBANKMENT, LONDON, S.E.

A SCHOOL OF THE UNIVERSITY OF LONDON.

ENTRANCE SCHOLARSHIPS in Natural Science are awarded at the beginning of each Winter Session. Subjects: Chemistry, Physics, and either Botany, Zoology, or Physiology.

The HOSPITAL contains more than 500 beds.

The SCHOOL BUILDINGS comprise lecture theatres, laboratories, and class rooms, well adapted for the modern teaching of students in all the subjects of the medical curriculum.

An Athletic Ground, a Gymnasium, and Club Rooms are provided.

For the Prospectus, containing full particulars as to fees, course of study advised, &c., and for any information as to entering the Medical Profession, apply personally or by letter to Mr. RENDLE, Medical Secretary.

H. G. TURNEY, M.A., M.D. Oxon., *Dean.*

THE LONDON HOSPITAL
MEDICAL COLLEGE.
UNIVERSITY OF LONDON.

118TH SESSION.

The Hospital is the largest general hospital in England, and contains nearly 800 beds.

APPOINTMENTS.—Eighty qualified resident appointments are made annually. Dressers, Clinical and Post-mortem Clerks, and Maternity Assistants are appointed every three months. All appointments are free. Holders of resident appointments are also provided free board.

SCHOLARSHIPS AND PRIZES.—Entrance Scholarships, value £120, £60, £60, £35, £30, and £20, will be offered for competition at the end of September. Numerous Scholarships and Prizes are given annually.

FEES.—120 guineas in one payment, or 130 guineas by instalments. A reduction of 15 guineas is allowed to the sons of members of the profession.

The Students' Clubs Union, embracing all the Scientific, Social, and Athletic Clubs, is available to all Students. The Clubs Union Ground is at Highams Park.

SPECIAL CLASSES.

Special Classes are held in the subjects required for the PRELIMINARY SCIENTIFIC M.B. (London) EXAMINATION.

Botany and Zoology.—By G. P. Mudge, A.R.C.S., Lond. F.Z.S., and W. N. F. Woodland, B.Sc.

Chemistry and Physics.—By Hugh Candy, B.A., B.Sc. Lond.

Fee for the whole Course, 10 guineas.

These Classes are not confined to Students of the Hospital.

Students who have recently passed the Matriculation or other Preliminary Examination can enter at once.

For further information apply, personally or by letter, to

Mile End, E. MUNRO SCOTT, *Warden.*

COLLEGE OF PRECEPTORS.

LECTURES ON ELEMENTARY PHONETICS FOR TEACHERS OF ENGLISH, FRENCH, AND GERMAN.

To be delivered by Professor WALTER RIPPMANN, M.A.

The Lectures will be delivered at the College on Friday Evenings, at 7 o'clock, on the following dates:—November 6 and 20, December 4, 1903; January 29, February 12 and 26, March 11 and 25, 1904.

SYLLABUS.

I. Origin of speech—origin of writing—early writing roughly "phonetic"—the "historical" tendency in spelling—attempts to counteract it—the question of spelling reform in English—disadvantages of the conventional English and French spelling—general neglect of ear-training—current misconceptions—teachers of foreign languages must know the sound of the mother tongue—the organs of speech: the lungs—how to breathe—defective breathing.

II. The organs of speech: the throat—voiced and voiceless sounds—*h*—the mouth and the nose—vowels and consonants—tense and lax formation of sounds—standard speech—the alphabet of the Association phonétique internationale.

III. The vowel systems of English, French, and German, and their representation in the phonetic and the conventional spelling.

IV. The continuants and their representation.

V. Stops and nasals, and their representation. The speech of little children.

VI. Sounds in connected speech—*liaison*—strong and weak forms—dissimilation and assimilation.

VII. Length, force, and pitch—difficulties of English pronunciation—Northern English—"elocution"—the phonograph.

VIII. By way of recapitulation: first lessons in French and German.

Practical exercises will be given in the course of each Lecture, except the first.

C. R. HODGSON, B.A., *Secretary.*

GUY'S HOSPITAL MEDICAL SCHOOL.
(UNIVERSITY OF LONDON.)

The SUMMER SESSION will begin on May 2nd, 1904.

(Students who have recently passed the College of Preceptors' Examination are advised to enter forthwith to prepare for the Conjoint Examinations in July next.)

The Hospital contains 586 Beds, which are in constant occupation.

ENTRANCE SCHOLARSHIPS.—Five Scholarships will be competed for in September, 1904. Two in Arts of the value of £100 and £50, and three in Science of the value of £150, £60, and £50. Students who enter in May, if otherwise eligible, are able to compete.

APPOINTMENTS.—Hospital appointments are made strictly in accordance with the merits of the Candidates, and without extra payment.

DENTAL SCHOOL.—A recognized Dental School is attached to the Hospital, which affords to Students all the instruction required for a Licence in Dental Surgery.

PRIZES AND SCHOLARSHIPS are awarded to Students in their various years, amounting in the aggregate to more than £650.

RESIDENTIAL COLLEGE.—The Residential College accommodates about 50 Students in addition to the Resident Staff of the Hospital. It contains a large Dining Hall, Reading Room, Library, and Gymnasium for the use of the Students' Club.

For Prospectus, particulars of the Scholarships, and further information, apply to the Dean, Dr. H. L. EASON, Guy's Hospital, London Bridge, S.E.

ROYAL COLLEGES OF SURGEONS
AND PHYSICIANS OF EDINBURGH AND FACULTY OF PHYSICIANS AND SURGEONS OF GLASGOW.

Copies of Regulations for the Triple Qualification of this Board (L.R.C.S.E., L.R.C.P.E., and L.F.P. & S.G.), containing dates of Professional Examinations for year 1904, Curriculum, &c., may be had on application to JAMES ROBERTSON, Solicitor, 54 George Square, Edinburgh, Inspector and Treasurer for Edinburgh; or from ALEXANDER DUNCAN, B.A., LL.D., Faculty Hall, 242 St. Vincent Street, Glasgow, Inspector and Treasurer for Glasgow. In applying for copies, please state *the date of commencement of medical study.*

SCHOOL BOARD FOR LONDON.

The services of a MAN or WOMAN ASSISTANT TEACHER, qualified to teach the subjects set out in Schedule V. of the New Code of the Board of Education, and specially qualified to teach Latin, are REQUIRED at the Chelsea Pupil Teachers' School, William Street, Hammersmith Road, S.W.

Salary: Man, £150 per annum, rising by annual increments of £5 to £200; Woman, £130 per annum rising by annual increments of £5 to £165.

Applications to be made on Form 40 P.T., on which, with other information, copies only of three testimonials must be given. A copy of this Form can be obtained from the Clerk of the Board. If a written application is made for one, it must be accompanied by a stamped and addressed envelope or wrapper.

Applications must be received by the CLERK OF THE BOARD, School Board Offices, Victoria Embankment, London, W.C., by or before the first post on Wednesday, February 10th, 1904.

Applicants who applied for the recently advertised vacancies for Assistants in the Board's Pupil Teachers' Schools can have the Form 40 P.T. they then submitted placed before the Committee on informing the CLERK OF THE BOARD by or before the first post on Wednesday, February 10th, 1904.

All communications on the subject of this notice should be marked outside "P.T. Schools."

Candidates from the country invited to attend the Committee will be allowed third-class return railway fare to London, or other reasonable travelling expenses and, if necessary, hotel expenses not exceeding 10s. a day for not more than two days. Applications for payment of hotel expenses must be accompanied by receipted vouchers. If a candidate, after being nominated, refuses to take up the appointment, no expenses will be allowed.

Applicants who do not receive, on or before February 18th, 1904, a summons to attend before the Committee, will understand that they have not been included in the list of candidates to be seen by the Committee, and will not be further communicated with.

COUNTY SCHOOL FOR GIRLS,
WALLINGTON, SURREY.—HEAD MISTRESS required at once. Salary £150, with capitation fee 10s. (average 100 pupils). Applications, with qualifications and copies of testimonials, to be sent to the Clerk of the Governors, A. E. DUTTON, Esq., Wallington.

OTAGO HIGH SCHOOL FOR
BOYS, DUNEDIN, NEW ZEALAND.—A MASTER is required to teach FRENCH and GERMAN. Salary, £300. Passage money will be paid. Applicants should be Englishmen familiar with modern methods. A Graduate preferred. Apply to H. W. EVE, Esq., 37 Gordon Square, W.C.

UNIVERSITY COLLEGE,
BRISTOL.

FACULTY OF ARTS AND SCIENCE.

Sessional Courses are organized for the following Examinations of the University of London:—

MATRICULATION.	INTERMEDIATE DIVINITY

Prospectuses can be obtained from the PRINCIPAL.

THE ANSTEY PHYSICAL TRAINING COLLEGE FOR WOMEN TEACHERS

PROVIDES a full course of instruction in Swedish Educational Gymnastics, Medical Gymnastics, and Massage, the aim being to send out trained Teachers with increased health and bodily vigour, mental strength, and moral power; to spread a knowledge of Physiology and the Laws of Health; to teach Gymnastics, Outdoor Games, Dancing, Swimming, and other forms of Physical Exercise in Schools and Colleges; to treat cases of Spinal Curvature, and many ailments which can be cured by scientific movements.

This is a most attractive vocation for educated women, and there are plenty of good openings for those trained at this College.

Students are almost always engaged before finishing the course.

For further particulars apply to the Principal, Miss ANSTEY, The Leasowes, near Halesowen, Worcestershire.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal—Miss STANSFELD

(Vice-President of the Ling Association of Gymnastic Teachers, Teacher of Gymnastics in the Cambridge Teachers' College, Froebel Educational Institute, Bedford Kindergarten College, Bedford High School, &c.).

THE object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Fencing, Lacrosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games, Swimming and Boating in the summer.

There is an increasing demand for Teachers thoroughly trained on this system.

For Prospectus apply—37 Lansdowne Road, Bedford.

ST. MARY'S COLLEGE, PADDINGTON, W.

TRAINING COLLEGE

(attached to High School and Kindergarten).

Recognized by the Board of Education as a Training College for Secondary Teachers.

Mr. MURRAY publishes the following Books suitable for

THE COLLEGE OF PRECEPTORS' EXAMINATIONS, 1904.

ENGLISH.

ESSAY WRITING FOR SCHOOLS. A Practical Exposition of the Principles of this form of Composition. Illustrated by Models and by Examples drawn from the English Classics, and designed to meet the requirements of the Public Examinations. By L. COPE CORNFORD, Author of "English Composition: a Manual of Theory and Practice." Crown 8vo, cloth extra, 4s. 6d.

CONTENTS: Introduction—Handwriting—Technical Rules—Essays (25 Subjects and Examples, pages 19-265)—Appendix: Common Errors—Practice Subjects—Subjects set in various Examinations.

"Deserves a cordial welcome both from teachers and students of its subject."—*Scotsman.*

SCHOOL MANUAL OF ENGLISH GRAMMAR. With Historical Introduction and copious Exercises. By Sir WM. SMITH, D.C.L., and T. D. HALL, M.A. With Appendices. Crown 8vo, 3s. 6d.

"An admirable English grammar. We cannot give it higher praise than to say that as a school grammar it is the best in this country."—*English Churchman.*

MANUAL OF ENGLISH COMPOSITION. With copious Illustrations and Practical Exercises. Suited equally for Schools and for Private Students of English. By T. D. HALL, M.A. Crown 8vo, 3s. 6d.

ENGLISH HISTORY.

THE STUDENT'S HUME: A History of England, from the Earliest Times to the Revolution in 1688. By DAVID HUME. Incorporating the Researches of recent Historians. Revised, Corrected, and Continued to the Treaty of Berlin in 1878, by J. S. BREWER, M.A. With Notes, Illustrations, and 7 Coloured Maps and Woodcuts. Crown 8vo, 7s. 6d.

*** Also in Three Parts. 2s. 6d. each.

I. **From B.C. 55 to the Death of Richard III., A.D. 1485.**
II. **Henry VII. to the Revolution, 1688.**
III. **The Revolution to the Treaty of Berlin, 1878.**

*** *Questions on the "Student's" Hume.*

ALGEBRA.

ALGEBRA. Part I. By E. M. LANGLEY, M.A., and S. R. N. BRADLY, M.A., Mathematical Masters at the Modern School, Bedford. Fcap. 8vo, 1s. 6d.

——— **Part II.** Fcap. 8vo, 2s. The Continuation and Completion of the above, of which Prof. JOHN PERRY, of the Royal College of Science, South Kensington, writes:—

"I never do praise a book unless I believe it to be good. Your Algebra (regarded as a book for beginners) pleases me very much indeed. I cannot imagine an Algebra prepared for schools in general, and especially for use by teachers in general, which would come nearer to my notion of what an Algebra ought to be, than yours."

GEOMETRY.

GEOMETRY. An Elementary Treatise on the Theory and Practice of Euclid. Having in view the new Regulations of the Oxford and Cambridge Local, the London Matriculation, the Board of Education, and other Examinations. By S. O. ANDREW, M.A., Head Master of Whitgift Grammar School, Croydon. Fcap. 8vo, 2s.

"A marvel of compression."—*School.*

FRENCH.

INTERMEDIATE FRENCH GRAMMAR AND OUTLINES OF SYNTAX. With Historical Notes. By G. H. CLARKE, M.A., of Hymers College, Hull, and L. R. TANQUEREY, B.-ès-L. Crown 8vo, 3s. 6d.

". . . . In short, we like it much, for it is full without confusion, correct without pedantry, and modern without vulgarity."—*Guardian.*

GRAMMAIRE FRANÇAISE. A New French Grammar, with Exercises on the "Direct Method"—written entirely in French. For the use of the Middle Classes in Schools. By W. MANSFIELD POOLE, M.A., Instructor in French at the Royal Naval College, Osborne, and MICHEL BECKER, Professor of Modern Languages in the École Alsacienne at Paris. Crown 8vo, 2s. 6d.

"The authors have erred on the right side by not giving too much information. As to what they have given we have nothing but commendation, for it is accurate, clearly expressed, well arranged, and printed in eminently readable type."—*Guardian.*

ITALIAN.

ITALIAN PRINCIPIA. Part I. A First Italian Course. Containing a Grammar, Delectus, Exercise Book, with Vocabularies, &c. Thoroughly revised and in part re-written by C. F. COSCIA, Professor of Italian in the University of Oxford. Crown 8vo, 3s. 6d.

ITALIAN PRINCIPIA. Part II. A First Italian Reading-Book, containing Fables, Anecdotes, History, and Passages from the best Italian Authors, with Questions, Notes, and an Etymological Dictionary. Crown 8vo, 3s. 6d.

SPANISH.

PRACTICAL SPANISH. A Grammar of the Spanish Language, with Exercises, Materials for Conversation, and Vocabularies. By Don FERNANDO DE ARTEAGA, Taylorian Teacher of Spanish in the University of Oxford. Two Parts. Crown 8vo, 7s. 6d.

"We may as well say at once that we heartily recommend this book to those who wish to obtain a practical knowledge of Spanish. It is really what it sets out to be. It is real Spanish—Spanish as 'she is spoke,' not fantastic illustrations of technical grammar. . . . We unreservedly commend Senor de Arteaga's book."—*Schoolmaster.*

SPANISH PRINCIPIA. Part I. A First Spanish Course. Containing Grammar, Delectus, and Exercise Book, with Vocabularies. On the Plan of Sir WM. SMITH'S "Principia Latina." By H. J. WEINTZ. Crown 8vo, 3s. 6d.

"There is no better work for beginning the study of Spanish."—*Belfast News Letter.*

GERMAN.

GERMAN PRINCIPIA. Part I. A First German Course. Containing Grammar, Delectus, Exercises, Vocabularies, and Materials for German Conversation. Crown 8vo, 3s. 6d.

GERMAN PRINCIPIA. Part II. A Reading Book. Containing Fables, Stories, and Anecdotes, Natural History, and Scenes from the History of Germany. With Grammatical Questions, Notes, and Dictionary. Crown 8vo, 3s. 6d.

CHEMISTRY.

A FIRST COURSE OF CHEMISTRY. By J. H. LEONARD, Author of "A First Course of Practical Science." With numerous Diagrams. Fcap. 8vo, 1s. 6d.

"Mr. Leonard has evidently taken great pains with the educational arrangement of his little manual, he follows the best lines for teaching, and his is really a sounder introduction than many a more expensive and ambitious book."—*Guardian.*

"A course of elementary chemistry resembling the well known course which was drawn up by Prof. Armstrong and endorsed by a British Association committee. Great pains are taken to make the teaching undogmatic and to imbue the pupil with the zeal of a scientific enquirer."—*Nature.*

POLITICAL ECONOMY.

ELEMENTS OF POLITICAL ECONOMY. With a New Chapter on "Interference with Foreign Trade." By JAMES BONAR, M.A., LL.D., Author of "Malthus and his Work," "Philosophy and Political Economy," &c. Crown 8vo, cloth extra, 4s. 6d.

"It is pleasant to find a modern book on economics written in simple English and unencumbered by those cabalistic phrases in which the veiled prophets of sociology delight."—*Morning Post.*

"Mr. Bonar's admirable little volume . . . will enable the general public to obtain a fair knowledge of the grounds upon which questions of fiscal and commercial policy have their foundation."—*Chamber of Commerce Journal.*

MR. HEINEMANN'S LIST.

ENGLISH LITERATURE.

An Illustrated Record. By RICHARD GARNETT, C.B., LL.D., and EDMUND GOSSE, M.A., LL.D. Now Ready. In Four Volumes. Small imperial 8vo, fully Illustrated. Price in cloth, £3 net, or in half-leather, £4. 4s. net, the set. Volumes in cloth may be had separately at 16s. net each.

Vol. I. **From the Beginnings to the Age of Henry VIII.** By RICHARD GARNETT.—Vol. II. **From the Age of Henry VIII. to the Age of Milton.** By RICHARD GARNETT and EDMUND GOSSE.—Vol. III. **From the Age of Milton to the Age of Johnson.** By EDMUND GOSSE.—Vol. IV. **From the Age of Johnson to the Age of Tennyson.** By EDMUND GOSSE.

In this work an attempt has been made to collect all pictorial material that is interesting and permanently valuable, in illustration of a new and elaborate study of English Literature by Drs. Garnett and Gosse. Whatever can entertain the eye or assist the memory is given in the text—a very large number of the best accredited portraits of English Authors (many of them hitherto unknown to the public), autographs, title-pages, caricatures, facsimiles, and whatever else can add to the legitimate illustration of the subject. But perhaps the most attractive features of these Volumes are the numerous colour-plates, photogravures, wood-engravings, and lithographic facsimiles. An Illustrated Prospectus will be forwarded on application.

LITERATURES OF THE WORLD.

A Series of Short Histories. Edited by EDMUND GOSSE, LL.D. Each Volume large crown 8vo, cloth, 6s. *Already issued:—*

ARABIC LITERATURE. By Prof. CLEMENT HUART.
ANCIENT GREEK LITERATURE. By GILBERT MURRAY, M.A.
FRENCH LITERATURE. By EDWARD DOWDEN, D.C.L., LL.D.

ITALIAN LITERATURE. By RICHARD GARNETT, C.B., LL.D.
RUSSIAN LITERATURE. By K. WALISZEWSKI.
PERSIAN LITERATURE. By DENISON ROSS.
SPANISH LITERATURE. By J. FITZMAURICE-KELLY, Corresponding Member of the Spanish Academy.
JAPANESE LITERATURE. By W. G. ASTON, C.M.G., D.Litt.
BOHEMIAN LITERATURE. By FRANCIS, Count LUTZOW.
SANSKRIT LITERATURE. By ARTHUR A. MACDONELL, M.A., Ph.D.
CHINESE LITERATURE. By HERBERT A. GILES, M.A., LL.D.
AMERICAN LITERATURE. By Prof. W. P. TRENT.

THE REGIONS OF THE WORLD.

A New Geographical Series. Edited by H. J. MACKINDER, M.A., Student of Christ Church, Reader in Geography in the University of Oxford, Principal of Reading College.

The Series will consist of Twelve Volumes, each being an essay descriptive of a great natural region, its marked physical features, and the life of its peoples. Demy 8vo, fully Illustrated in the Text, and with many Maps and Diagrams. Price 7s. 6d. each. Or by subscription for the set, £4. 4s. *Already issued:—*

CENTRAL EUROPE. By JOSEPH PARTSCH, Ph.D.
BRITAIN AND THE BRITISH SEAS. By the EDITOR.
THE NEARER EAST. By D. G. HOGARTH, M.A.
Other volumes in active preparation.

THE WORLD'S HISTORY.

A Survey of Man's Record. Edited by Dr. H. F. HELMOLT. To be completed in Eight Volumes. Royal 8vo. With many Maps, Coloured Plates, and Black and White Illustrations. Price, in cloth, 15s. net per volume; or, half-morocco, 21s. net. *Already issued:—*

WESTERN EUROPE TO 1800. | **AMERICA AND THE PACIFIC OCEAN.** | **THE MEDITERRANEAN NATIONS.**
OCEANIA, EASTERN ASIA AND THE INDIAN OCEAN. (*Immediately.*)
Other volumes in active preparation.

THE FRENCH AND ENGLISH WORD-BOOK.

A Dictionary with Indication of Pronunciation, Etymologies, and Dates of Earliest Appearance of French Words in the Language. By H. EDGREN, Ph.D., and P. B. BURNET, M.A. One Vol. Cloth, 10s.; half-morocco, 16s.

THE GREAT EDUCATORS.

A Series of Twelve Volumes by Eminent Writers, presenting in their entirety "A Biographical History of Education."
Each subject forms a Complete Volume. Crown 8vo, 5s.

A COURSE OF PRACTICAL PHYSICS FOR SCHOOLS. By C. J. L. WAGSTAFF, M.A., and G. C. BLOOMER, B.A., Science Masters at Bradford Grammar School.
First Year.—Mensuration, Mechanics, and Hydrostatics.
Second Year.—Sound, Light, and Heat.
Third Year.—Electricity and Magnetism. (*In January*).
Demy 4to. 1s. 6d. each.

These books are intended to stimulate a boy to think for himself rather than to allow him to cull facts in a mechanical manner from a detailed text-book. Under the teacher's supervision the boy is set to deduce his facts by actual experiment and to record those facts in the spaces provided in the book; and, judging from results, the method is to be considered eminently satisfactory. It gives at once scope to the teacher and individuality to the boy.

PLAYS FOR ENTERTAINMENTS. Three Merry Comedies for Schoolboys and Such. By C. A. PELLANUS. With Illustrations by F. C. K.
1. Too Clever by Half. 2. A Fresh Start. 3. The First Days of the Holidays.
These Plays have been well written by one who thoroughly understands the tastes and powers of boys. The humour is boy-like without being vulgar, and the staging is of the simplest nature.
8vo. Three Plays in 1 vol., 2s. 6d. Each Play separately, 1s.

Just Published. Crown 8vo, 6s.

THE BIBLICAL HISTORY OF THE HEBREWS. A Text-Book, based upon the lines of the Higher Criticism, designed for use in the Higher Forms in Schools and for Students generally. By F. J. FOAKES-JACKSON, B.D., Fellow of Jesus College, Cambridge; Hon. Canon of Peterborough.
Warmly welcomed by the majority of reviewers as a deeply interesting and scholarly book which, while acknowledging the value of the critical work of recent scholars, maintains an inspired origin for the Biblical narrative.

"HELPS BY THE WAY" SERIES. Written by S. STEWART STITT. Crown 8vo. 2s. net.
II.—Early Church History Analysed. Arranged in the form of Questions and Answers, with Synoptic Tables and Examination Questions.

Prospectus and full particulars on application to the Publishers.

Mr. Edward Arnold's Educational List.

PROF. OMAN'S HISTORIES.

A History of England. By C. W. OMAN, M.A., Fellow of All Souls' College, Oxford. Fully furnished with Maps, Plans of the principal Battlefields, and Genealogical Tables. 760 pages. Ninth and Enlarged Edition (to end of South African War). Crown 8vo, cloth, 5s.

Special Editions, each volume containing a separate Index.

In Two Parts, 3s. each:—Part I., From the Earliest Times to 1603; Part II., From 1603 to 1902.

In Three Divisions:—Division I., to 1307, 2s.; Division II., 1307 to 1688, 2s.; Division III., 1688 to 1902, 2s. 6d.

*** *In ordering please state the Period required, to avoid confusion.*

England in the Nineteenth Century. By C. W. OMAN, M.A., Author of "A History of England," &c. Revised and Enlarged Edition. 3s. 6d.

Seven Roman Statesmen: a Detailed Study of the Gracchi, Cato, Marius, Sulla, Pompey, and Cæsar. By C. W. OMAN, M.A. With Illustrations. Cloth, 6s.

Lessons in Old Testament History. By the Ven. A. S. AGLEN, formerly Assistant Master at Marlborough College. 450 pages. Cloth, 4s. 6d.

Old Testament History. By the Rev. T. C. FRY, Head Master of Berkhamsted School. Cloth, 2s. 6d.

TWO NEW FRENCH READING-BOOKS.

L'Apprenti. By EMILE SOUVESTRE. Edited by C. F. HERDENER, French Master of Berkhamsted School. Cloth, 1s.

Richard Whittington. By Madame EUGÉNIE FOA. And **Un Conte de L'Abbé de Saint-Pierre.** By EMILE SOUVESTRE. Edited by C. F. HERDENER. Cloth, 1s.

MISS JETTA WOLFF'S FRENCH BOOKS.

Les Français en Ménage. With Illustrations. Cloth, 1s. 6d.
An entirely original book, teaching the ordinary conversation of family life in France by a series of bright and entertaining scenes.

Les Français en Voyage. Cleverly Illustrated. Cloth, 1s. 6d.

Français pour les tout petits. With numerous Illustrations. Cloth, 1s. 3d.

Les Français d'autrefois. Stories and Sketches from the History of France. Cloth, 1s. 3d.

EASY GERMAN TEXTS.

An entirely New Series for Pupils who have acquired a simple Vocabulary and the Elements of German. Edited by WALTER RIPPMANN, M.A., Professor of German at Queen's College, London.

The following Volumes are ready. Cloth, price 1s. 3d. each.

Andersen's Bilderbuch öhne Bilder (What the Moon saw).

Prinzessin Ilse. By MARIE PETERSEN.

Virgil—Aeneid. BOOKS I., II., and III. The New Oxford Text. Edited, with Introduction and Notes, by M. T. TATHAM, M.A. Cloth, 1s. 6d. each.

Caesar's Gallic War. BOOKS I. and II. Edited by T. W. HADDON, M.A., and G. C. HARRISON, M.A. Cloth, 1s. 6d.

——— BOOKS III.–V. Edited by M. T. TATHAM, M.A. Cloth, 1s. 6d.

——— BOOKS V. and VII. Edited by M. T. TATHAM, M.A. Cloth, 1s. 6d.

The Fables of Orbilius. By A. D. GODLEY, M.A., Fellow of Magdalen College, Oxford. With Humorous Illustrations. Book I., 9d.; Book II., 1s.

MATHEMATICS, &c.

Exercises in Arithmetic (Oral and Written). Parts I. and II. By C. M. TAYLOR (Mathematical Tripos, Cambridge), Wimbledon High School. Cloth, 1s. 6d. each.

An Arithmetic for Schools. By J. P. KIRKMAN, M.A., and A. E. FIELD, M.A., Assistant Masters at Bedford Grammar School. 500 pages. With or without Answers. Cloth, 3s. 6d.

The Elements of Euclid. By R. LACHLAN, Sc.D., formerly Fellow of Trinity College, Cambridge.
The following separate Editions are now issued:—Book I., cloth, 1s.; Books I. and II., cloth, 1s. 6d.; Books I., II., and III., cloth, 2s. 6d.; Books III. and IV., cloth, 2s.; Books I.-IV., cloth, 3s.; Books IV.-VI., 2s. 6d.; Books I.-VI. and XI., 4s. 6d.; Book XI., 1s.

The Elements of Algebra. By R. LACHLAN, Sc.D. With or without Answers, 2s. 6d. Answers separately, 1s.

The Elements of Inorganic Chemistry. For use in Schools and Colleges. By W. A. SHENSTONE, Lecturer in Chemistry at Clifton College. xii + 506 pages. Cloth, 4s. 6d.

A COMPLETE COURSE OF GEOMETRY.

A First Geometry Book. By J. G. HAMILTON, B.A., Lecturer on Geometry at the Froebel Educational Institute; and F. KETTLE, B.A., Head Master of Clapham High School for Boys. Cloth, 1s. Answers (for Teachers only), 6d.

Elementary Geometry. By W. C. FLETCHER, M.A., Chief Inspector of Secondary Schools. Cloth, 1s. 6d.

The Elements of Geometry. By R. LACHLAN, Sc.D., and W. C. FLETCHER, M.A. With Answers, 2s. 6d.

Plane Geometry. Adapted to Heuristic Methods of Teaching. By T. PETCH, M.A., B.Sc., Lecturer in Mathematics, Leyton Technical Institute. 1s. 6d.

CATALOGUES ON APPLICATION.

PHILIPS'
COMPARATIVE SERIES
OF
LARGE SCHOOLROOM MAPS.
Combining Physical and Political Geography.

The great success that attended the publication of **Philips' Elementary Atlas of Comparative Geography** has induced the publishers to produce a series of large Schoolroom Maps based upon the same principle.

Physical Features are specially prominent.
Uniformity of Scale and Comparison of Areas.
Political Boundaries are clearly shown.
The lettering is well executed.
Great care has been bestowed upon the selection and spelling of names.

NOW READY.

Mounted on Cloth, Rollers, and Varnished.

AFRICA. Size, 74 by 59 ins. Price **16s.**
EUROPE. Size, 80 by 63 ins. Price **18s.**
ENGLAND AND WALES. Size, 80 by 63 ins. Price **18s.**

Others in preparation.

Corresponding Test Maps, without names, uniform with the above in size and price.

PHILIPS'
MODERN SCHOOL ATLAS.

AN IDEAL ATLAS FOR PUPIL-TEACHERS, SCHOLARSHIP STUDENTS, AND SCHOLARS IN SECONDARY SCHOOLS.

Sixty-four beautifully Coloured Plates of Diagrams and Maps, with full Index.

Size, 11¼ by 9 ins. Strongly bound in cloth boards, price **3s. 6d.**

Principals of Secondary Schools and Pupil-Teachers' Centres should see a copy of this Atlas before ordering elsewhere.

PHILIPS'
Atlas of Comparative Geography
FOR JUNIOR CLASSES.

Comprising a Series of 40 Coloured Plates, containing over 90 Maps and Diagrams, with 8 pages of Introductory Letterpress and Index.

Size, 11 by 8¾ ins. Strongly bound in limp cloth, price **2s.** In cloth boards, gilt, price **2s. 6d.**

Illustrated Catalogue of Publications post free on application.

SHORT FRENCH EXAMINATION PAPERS (110).

Each containing Six Idiomatic Sentences to render into French.
Very useful for *Oral* Work. Second Edition. 2s. 6d., cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly.*

"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education.*

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers, 6s. net. (A list of errata is issued with this.) By H. R. LADELL, M.A., F.R.G.S., late Head Master of the London International College, Isleworth.

THE PUBLIC SCHOOL SPELLING CARD.

Fortieth Thousand. 6d. *By the same Author.*

Containing nearly 1,000 words (in which actual *mistakes have frequently been made*, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

The same Words, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

FRENCH ESSENTIALS AND FRENCH CONVERSATION SENTENCES.

Third Edition. 2s., cloth; 1s. 6d. boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education.*

THE NEW ALDERSGATE ATLAS.

Comprising 64 Coloured Plates, imperial 4to, making 136 Maps and Diagrams, Mathematical, Physical, and Political, on the Comparative System, with Full Index. Cloth boards, 3s. 6d.

MATHEMATICAL PAPERS.

For Army Classes. Divided into one-hour Sections. By H. S. BRABANT, B.A. (late Exhibitioner of Sidney Sussex College, Cambridge). Cloth, 1s. 6d., or with Answers, 2s. 6d.

NEW PUBLICATIONS FOR LOCAL EXAMINATIONS.

JUNIOR FORM ALGEBRA.

By R. B. MORGAN, B.Litt., Author of "Graphs," "Exercises in Geometry," &c.

Written on new lines to meet the recommendations of the Mathematical Association. Illustrated by 14 Diagrams of Graphs, &c. A good selection of Examples is added.

Crown 8vo, cloth, 1s. 6d.

GEOGRAPHY OF GREAT BRITAIN AND IRELAND.

Specially written for the Locals by A. G. HAYNES, B.A.

Crown 8vo, cloth, 8d.

Illustrated by 6 Maps. Compiled on a new and original Plan. Special attention given to Commercial Geography.

PHYSIOGRAPHY FOR LOCAL EXAMINATIONS.

By W. J. PERRY, M.A., LL.D., Head Master of St. Anne's School, Redhill.

With over 40 Illustrations, Maps, and Diagrams. It includes also the Local Examination Questions for several years.

Crown 8vo, cloth, 2s.

[*Ready immediately.*

HISTORY OF ENGLAND. PART II. (1485–1689).

By G. CARTER, M.A. Crown 8vo, cloth, 2s.

No better book can be used by candidates. It contains everything necessary in its most concise form, and nothing superfluous.

RELFE BROTHERS, Ltd., Educational Publishers, Booksellers, and School and College Stationers,

THIRD AND CHEAPER EDITION (4th Thousand), REVISED THROUGHOUT AND MUCH ENLARGED.

Pott 4to, 4s. net.

A Guide to the Best Historical Novels and Tales.

BY JONATHAN NIELD.

"Mr. Nield has given us a good piece of work, for which all lovers of historical novels and all teachers of history in schools should be grateful. . . . He supplies an interesting and well written introduction, as well as a valuable bibliography of articles and books on the subject . . . . The two short lists of books, one for boys and one for girls, seem to us likely to be very helpful. Mr. Nield has our very best wishes for his success."—***Journal of Education.***

"This book is indispensable for all teachers who believe in the educational value of historical fiction. It contains an interesting introduction, a classified list of the best historical novels and tales, suggestive courses of reading for boys and girls, and an extensive bibliography of the subject. Though Mr. Nield does not appear to be himself a teacher, or primarily interested in education, he displays considerable insight into the needs of the teacher, and shows acquaintance with various educational books and papers which would naturally be outside the ken of the mere literary man. . . . We heartily commend the book to our readers; it combines the excellences of a useful work of reference and a dainty gift-book in quite an extraordinary degree."—***School World.***

"Suggestive and useful. Discriminating introduction."—***Educational Times.***

"The idea of the book is a good one, and worked out with much care."—***Spectator***

London: ELKIN MATHEWS, Vigo St., W.

ABERDARE HALL, CARDIFF.—RESIDENCE FOR WOMEN STUDENTS OF THE UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.

Principal — Miss KATE HURLBATT.

Fees, £42. 10s., £36. and £32 per annum. College tuition fees, £10 per annum. Scholarships of £25 and Exhibitions of £10 will be awarded on the result of Scholarship Examination to be held in September. A Medical School and Department for Secondary, Elementary, and Kindergarten Training are attached to the College. Residents can attend Dispensing Classes at Cardiff Infirmary. AN ELEMENTARY AND INTERMEDIATE ALGEBRA

WITH EXERCISES AND ANSWERS.

By the Rev. J. LIGHTFOOT, D.Sc., M.A.,

Author of "Elementary Logic," &c.

Crown 8vo, 472 pp., strongly bound in Cloth. **Price 4s. 6d.**

This valuable new work covers all the Algebra generally required for the Preliminary and Intermediate Examinations at the Universities. A special feature is the very clear and interesting treatment of graphic methods.

Specimen pages post free on application.

"A well arranged practical book, well up to modern requirements."—*Head Teacher.*

"Logical development; principles rigorously established."—*Educational Times.*

"The teaching is unimpeachable and healthy. We wish success to this fine exposition of Algebra."—*Schoolmaster.*

"A first-rate book. It covers much ground, is full of lucid explanation, has abundant examples, is capitally planned, and possesses some unique features. Altogether, it should take a high place among the best of modern school books."—*Board Teacher.*

"Among newer mathematical text-books suitable for the use of young students there are few that have come under our notice that are so good as 'An Elementary and Intermediate Algebra,' by Dr. Lightfoot. . . . The book is a most commendable piece of work and deserving of high praise."—*School Guardian.*

"The matter is very logically arranged, and the illustrative examples are perfect models of mathematical reasoning and statement. Exercises for practice are supplied in profusion, to which answers are provided. This portion of the work has been very carefully supervised, and is remarkably free from errors."—*Teachers' Aid.*

**** *A full Catalogue of the best books for Students and Teachers will be forwarded post free on application.*

BLACKIE'S FIRST LATIN COURSE.

By E. H. Scott, B.A., and Frank Jones, B.A.

A NEW LATIN BOOK FOR BEGINNERS. BASED ON CONVERSATION THROUGHOUT. PRICE 1s. 6d.

The most successful endeavour to apply modern methods to the teaching of Latin. The book has been adopted in the leading Preparatory Schools, and in the lower forms of the great Public Schools. Its success has caused a second part on the same lines to be prepared.

The **SCHOOL WORLD** says:—"This is quite the best book hitherto published for beginners, and we venture to prophesy that this, or others written on the same principle, will supersede all existing manuals."

THE JOURNAL OF EDUCATION says:—"We greatly prefer this Latin book for beginners to the comic Latin primer which was the last book of the kind we noticed. This bears on the face of it the marks of direct experience. The plan of the book is thoroughly sound, and it has been well carried out."

Professor J. P. POSTGATE, in the **Classical Review,** says:—"It is clear and practical in its plan and arrangement, the sections (*capita*) seem to be of the right length and properly graduated in difficulty, the importance of pronunciation is recognized; in a word, it appears to be a very teachable book."

Illustrated Latin Series.

General Editor—Prof. R. Y. TYRRELL, Litt.D., Fellow of Trinity College, and late Regius Professor of Greek in the University of Dublin.

GALLIC WAR. Books I.-VII. Edited by Prof. JOHN BROWN, M.A. I., II., III., and IV., 1s. 6d. each; V., VI., and VII., 2s. each.

The Educational Times.

The Tenure of Assistant Masters.

THE question of tenure has often been discussed in these columns—impartially, we hope, and certainly with sympathy for both head and assistant masters—and it is therefore with great pleasure that we receive the *concordat* which has been ratified by both the I.A.H.M. and the A.M.A. in general meeting assembled. We learn that in both associations the agreement was only carried after prolonged discussion, and with dissentient minorities—clear proof that the plenipotentiaries upon either side, who drafted the terms under the chairmanship and with the assistance of Sir Edward Fry, have reached a compromise which represents "the common sense of most" and unduly favours neither party.

The question is beset with difficulties. On the one side the Head Masters, feeling intensely that responsibility for the welfare of their schools which the Endowed Schools Act endeavoured—and successfully—to fasten upon them, have hitherto held that the interference of any outside authority between them and their assistants would render their position impossible. The work an assistant master has to do is, they said, so individual and so little according to rule that a layman cannot estimate the fitness of a candidate, nor can he appreciate the reasons which may render it desirable to dispense with the services of a particular teacher. On the other side, the Assistant Masters contended that the interposition of the head master, with the sole power of appointment and dismissal, between them and the authorities of the school, deprived them of all standing ground and left them entirely dependent upon the honour of a single man.

Under the system of tenure prevailing at the present time in the vast majority of endowed schools, the head master may dismiss his assistant "at pleasure"—that is to say, for any reason or no reason—and, the requisite notice having been given, no appeal to the Courts is possible. It is upon this point that the first part of the compromise was arrived at. Dismissal in future, if and when the Board of Education embodies these resolutions in schemes under the Endowed Schools Act, is only to be "at discretion." A footnote explains this phrase to mean that the governing body of the school shall be able to inquire into the manner in which the discretion is exercised. Thus, when a head master who "has done that he should be sorry for" reports his action to his governors—which it is stipulated in the agreement he shall do "forthwith"—an opportunity is provided for a reconsideration of the case in a manner which will not necessitate the head master's resignation, even if, in deference to the opinion of his governors, he has to withdraw the notice.

A further gain to the assistant master is that he is declared to hold his office "from and under" the governing body, the head master acting merely as the agent of that body for the time being. This clause, if adopted, will at one stroke do away with the most fruitful cause of harsh dismissals. Many governing bodies are under the delusion that on the decease or departure of a head master his assistants can and ought to be called upon to perform *suttee;* and the "new broom," anxious for the proverbial "clean sweep," sometimes falls in with that opinion. Moreover, if we mistake not, this clause will prepare the way for material advantage hereafter. The Charity Commissioners have hitherto declined to allow foundation funds to be spent in pensions for assistant masters, because the latter have no legal existence under the schemes. That obstacle, at least, will be removed.

But the greatest concession which the assistant masters have won is on the subject of appeal against dismissal. This, it is agreed, shall lie to the Board of Education. It is very much to the credit of the Head Masters that, having decided to concede appeal, they went about to make it as real as possible. No pecuniary loss is to fall upon a successful appellant, and the Board's findings are to be binding and final. If reinstatement be ordered, the order will be obeyed. It is well that this should be so. Those who object that the head master will then have to go, must remember that "evil deeds sow evil seeds": there can be no health in the body politic if the wrong-doer is to be sheltered from the consequences of his action. But the fact that the course which has been followed is right did not make it any easier. In thus taking their lives in their hands the Head Masters have acted with a generosity which men of the world would probably call quixotic.

The next step must be made by the Board of Education,

Digitized by Google

which, no doubt, is now considering these joint resolutions. Two years ago the request of the two associations that the Board would re-commit its tenure policy was curtly refused. But "autres temps, autres mœurs." Much has happened to the Board of Education since those days. The presence of some of its chief officials at the Conference which has resulted in these resolutions, is at least a guarantee that they will be considered on their merits. In our opinion "the mass of costly and litigious business" in which the Commissioners of 1895 predicted the Board would be involved as a result of a central appeal is not at all likely to be created. There will be very few appeals. The existence of the right of appeal will be sufficient to deter the head master who is inclined to abuse his position from proceeding to extremes. The alternative is professional ruin, which no man will lightly risk. And for the same reason a dismissed assistant will not take action on a frivolous pretext.

There can be no doubt that a settlement of this vexed question upon these or similar lines would go far to remove one of the prime causes of unrest among masters. "The system of dismissal at pleasure," said the representatives of the assistants before the Royal Commission, "is felt by assistant masters as the keenest disability under which they suffer." We need more and more in our schools men of originality, of character, and of ability. They are not too plentiful in any walk of life, and they are precisely the men to revolt against the state of utter subservience to which the present system of tenure reduces them. Men are lost to the profession in the beginning because of the wretched pittances with which they are expected to be content. This in itself is a serious matter; but far more serious is the steady drift outwards of those who have been successful teachers for five or ten or fifteen years, and who as they approach their second climacteric feel that they must at any cost breathe a freer, ampler air.

Whether or no the Board of Education takes the chance which this *concordat* offers, the conference and the resolutions will not have been in vain. In spite of the divergence of interest and the difference of status between the two associations, it has been possible to come to an amicable agreement upon such a burning question as this. The object lesson comes in the nick of time. If teaching is ever to take its proper place as an organized profession, we must compose our domestic quarrels and work in harmony to achieve that end. So may it be!

NOTES.

A special volume would be necessary to do justice to the numerous conferences of teachers briefly reported in our present number. The main trends of opinion, however, can be discerned from the general outline, and the "awakened consciousness" is deeply marked. If only some authoritative educational genius would co-ordinate the vast amount of current thinking and speaking on educational subjects, so as to bring matters to a point on a practical basis! Even if some outstanding opinion on each of the greater questions could be set up as a definite proposition on which arguments might converge! All this energy and enthusiasm can hardly be said to be running to waste so long as the profession is interested and the public is gradually familiarized with what is going on. But, comparatively speaking, and having regard to practical action, the waste seems portentous. Now that secondary education is taken in hand as matter of public care and administration, it is but natural that people should look for definite leading to the authorities. The urgency of the matter has long been sufficiently obvious.

Sir Oliver Lodge, in his address to the Teachers' Guild Conference, pointedly raised the question of "educational" as against "disciplinary" methods of instruction. The terms do not seem fortunate, but the meaning is sufficiently plain: "The act of learning is considered more important than that which is learnt; speaking generally, there is really no attempt made to awaken curiosity and hunger for knowledge." In so far as the appetite for further knowledge is not fostered, the question arises why this is so. Probably it will be found to be no lack of desire on the part of the teacher, but some practical impediments controlling his action—the impending examination confined to narrow limits and to specific aspects, or the restrictions of text-books and so forth. At the same time, the means of "discipline" are not to be despised; and then there is the question of harmonious adjustment. The issue appears to point to a larger freedom of the teacher, and therefore a higher qualification for such extended trust. Canon Bell, addressing the Head Masters, substantially argued in the same direction when he demanded more freedom for the teacher, "deliverance from the complex net-work of examinations and from other defects of the examination system," and increased grants for secondary schools. The current discussions bring into ever clearer relief the importance of the secondary schools as the backbone of the whole system.

Mr. Page, in his way-going address from the presidency of the Assistant Masters, said truly enough that "all educational problems resolved themselves ultimately into two clear ones —what to teach and how to get it taught." But these problems can be worked out practically only through the details, and then comes the rub. What to teach—"there is complexity and confusion where there ought to be order and simplicity." But the complexity is inevitable, and the confusion arises from the want of some authority to consider the facts timeously and with full representative competence, and then to adjust practice to the decision, so as to bring in "order and simplicity." Meantime we can but flounder on amidst conflicting and sometimes self-regarding opinion and action—or inaction. How to teach—here again there is expansive chaos in all departments; and the remedy is very far from being within sight. We will not adopt Mr. Page's bitter words about "professors who never stooped to performance, experts without experience, and administrators who had never been apprentices"; but they are far from being undeserved, and the facts they censure are not likely to be obscured. We are entirely with him in looking for the key to the problems in the character and capacity of the teacher, which again depends not a little on his pay, his

Digitized by Google

tenure, and his encouragement. While the public views, right or wrong, instructed or uninstructed, selfish or unselfish, must be heard and taken into account, the essential matter is the teacher. So the teacher must combine and thrash out and formulate his views and raise his voice. Mr. Page shows a conspicuous example.

We have great pleasure in offering our very cordial congratulations to our able and genial contemporary the *Journal of Education* on the happy occasion of its "silver wedding." The form of commemoration, in the January number, was eminently fit, interesting, and useful—"miscuit utile dulci." The retrospect of the past quarter of a century in education, with a forecast of probable advance in the future, by a corps of prominent educationists headed by the Principal of the University of London, will be a document of permanent value in educational history. The achievement of presenting a round hundred pages—and such full pages—in a single number is surely unparalleled in the annals of the educational press. Perhaps none of the columns carried such keen interest as the "Editorial" prologue itself. Who shall say that education is a dry and uninteresting subject? We wish the *Journal* continued and increased success in the future, when its insight, independence, fair-mindedness, and verve will be more needed than ever and more valuable to the cause of genuine progress.

We desire also to congratulate the *School* heartily upon its first appearance in the arena. Mr. Murray has furnished it forth in sumptuous and attractive style, and Mr. Laurie Magnus has marshalled a distinguished band of coadjutors. The high aims previously announced are strenuously pursued in the first issue (January), and we hope they will be strenuously maintained. The motto—"To prepare us for complete living is the function which Education has to discharge"—comes from Herbert Spencer, who is commemorated (with fine portrait) by Sir Philip Magnus in the columns devoted to "Our Leaders." The general ethical purpose will be universally approved, perhaps more enthusiastically on the other side of the Atlantic than even on this side; and the determination to "subscribe to no party and to no denomination" maintains a free hand. "We hope," writes the editor, "to serve the country in educational affairs as the voice of its awakened consciousness." If we might change the article preceding "voice," so as to guard the rest of us from acquiescing in being reduced to silence, we hope so too. However, "solvitur ambulando"; and we cordially wish our youngest contemporary a strong and steady step, as well as a powerful and sustained voice.

The difficulties involved in the education of defective children press upon the administrators more and more urgently the more seriously they are tackled. "Besides feeding and physical exercise," said Sir J. Crichton Browne, at the International Congress for the Welfare and Protection of Children held in London some eighteen months back, "multifarious agencies operate on the child and help to make or mar its physical efficiency, and all these I would sum up under Mothering, Homing, and Schooling, which I name in the order of their importance." The development of popular instruction in first aid, home nursing, and hygiene, so actively and judiciously directed by Dr. R. J. Collie, the London School Board's Medical Superintendent for these subjects, must tend greatly to aid the beneficent agencies enumerated by Sir J. Crichton Browne. But, in the case of the various classes of defectives, it is increasingly felt that some specifically drastic measure is necessary. Dr. R. Reid Rentoul, of Liverpool, in a recent "Appeal to Asylum Managers and others" (see "First Glances, Miscellaneous"), points out that "our asylums and like places are practically manufactories for degenerates," and that "on January 1, 1903, 1 in 293 of the total population was a lunatic"—an officially notified lunatic. This is a frightful statistic, and the causes need to be carefully investigated. We wish Dr. Rentoul had produced definite statistics in support of the statement about the asylums. If his proposed revival of an ancient Scottish remedy be somewhat startling, at any rate there is a strong feeling in favour of a suggestion made by Dr. Martin W. Barr, of Pennsylvania, in a paper read at the International Congress of 1902, for "the permanent sequestration, under conditions dictated by science forbidding increase, of those adjudged unfit for the duties of parenthood and citizenship."

SUMMARY OF THE MONTH.

The Roman Catholic Hierarchy in Ireland is understood to have passed a resolution (January 12) approving of Lord Dunraven's suggestion for a solution of the Irish University question by the establishment of two endowed King's Colleges within Dublin University—one in Ulster for Presbyterians, and the other in Dublin for Roman Catholics—the colleges to be subject to the supervision of a Visiting Board appointed by the State. This scheme is practically the same as that submitted to Trinity College some time ago by Mr. Wyndham. The Bishop of Limerick, however, has laid stress on the difficulties to be encountered owing to differences of opinion amongst the members of the Government. Moreover, Lord Dunraven has put forward no definite or explicit proposal that may enable one to judge what prospect of success there is in his attempt to reconcile the conflicting views and interests of Trinity College and the Catholic Hierarchy.

Mr. John H. Cooke, Winsford, Cheshire, offers "a legal solution of the Passive Resistance problem." He proposes "that the Public Education Authority should not out of the rates pay, in the words of Subsection 2 of Section 14 of the Act of 1870, for the teaching of any 'religious catechism or religious formulary which is distinctive of any particular denomination'"; and "that such last-mentioned denomination should pay for such distinctive religious instruction out of private funds raised for that particular purpose." Construing together Section 5 of the Act of 1902 and Section 14 of the Act of 1870, he takes them to mean "that the Local Education Authority cannot in any school give, require, or pay for religious instruction which is distinctive in its character"; and this view he holds to be confirmed by Section 7, Subsections 1 and 6, of the Act of 1902. It follows also that, "so much of the salary of each teacher engaged in giving religious instruction is not 'an expense of the Council' within Section 18 of the Act of 1902." Hence, "it is not legal" to pay the *total* salary of each teacher in the non-provided schools, as the Education Committees have been doing.

The promoters of the new scheme for the higher education in connexion with University education of working men hope to have it in going order by autumn. A committee is to be established in Liverpool, and a conference will be held in Manchester in June, and another in Exeter in August, in connexion with the

Digitized by Google

Cambridge University Summer Meeting. The movement is receiving support from many quarters, including co-operative societies and trade unions, for whose especial benefit it has been started. It is considered that co-operators and trade unionists are representative of the chief movements of democracy, and that, as such, they should be sufficiently educated to bear their legitimate burdens in municipal, national, and imperial affairs.

The memorandum on the new scheme for Army entrance examinations, issued from the War Office in November last, has been amended as follows:—The subjects covered by the qualifying certificate will be divided into two classes—Class I.: (1) English, (2) English History and Geography, (3) Mathematics (elementary). All candidates must qualify in each of the three subjects. Class II.: (1) Science, (2) French or German, (3) Latin or Greek. All candidates must qualify in two of the three subjects. No candidate may take out a "leaving certificate," or its equivalent, or pass the qualifying literary examination before the age of seventeen. The languages that may be taken up as voluntary subjects at the competitive examination for admission to the Royal Military Academy or the Royal Military College will be German or French and Latin or Greek.

The Secretary of State for War has approved a new scheme for the appointment of candidates from the Universities to commissions in the Regular forces. It has been framed by the Advisory Board on Military Education, who are strongly of opinion that a commission ought not to be granted until the University career has been completed by graduation, which will, therefore, be required in future; First Class Honours giving, under certain conditions, a year's seniority. The Board do not, however, consider that a candidate need defer until the taking of his degree the acquisition of such knowledge of military subjects or such practical military training as is essential before the grant of a commission; and they have found various University authorities fully prepared to co-operate with the War Office in providing, on their own part, means for the study of several branches of military science and history. The scheme will come into force in September, 1905.

The annual general meeting of the Royal Drawing Society was held at the Caxton Hall, Westminster, on January 11, Mr. Lionel Cust, M.V.O., F.S.A., presiding. Mr. T. R. Ablett, Art Director and Honorary Secretary, gave a very interesting lecture on the "Snap-shot Drawings" of the Guild of Illustrators, with lantern illustrations. A collection of such drawings, we understand, has been sent, together with an account of the system that produced them, to the French Minister of Fine Arts, at the suggestion of President Loubet. The Gold Stars offered by the Council of the Society to teachers were duly awarded, the competing works being exhibited.

The Women's Industrial Council held a Conference, at the Board Room of the London School Board (January 29), to consider the following resolution:—

That this Conference is impressed with the urgent need of providing training for girls of the industrial class in the care and management of children. That this training on broadly educational lines should take place at a day technical school, and continue for not less than a year. That this Conference earnestly recommends the Technical Education Board of London and all organizations dealing with technical training to consider the possibility of establishing suitable schools.

The resolution will be circulated to all the Education Authorities throughout the country.

The Datchelor Training College has had another successful year. Eight of the senior students have gained the Cambridge Teaching Diploma, and two the London Teaching Diploma.

The Rev. George Salmon, D.D., who has been Provost of Trinity College, Dublin, since 1888, died on January 22. He was distinguished alike as a mathematician and as a divine.

We record with regret the death of Lord Braybrooke, Master of Magdalene College, Cambridge (January 12).

IMPORTANT EDUCATIONAL CONFERENCES.

Joint Conference of Educational Associations.

A Joint Conference of Educational Associations was held in the City of London School on January 11, under the Presidency of the Rt. Hon. A. H. Dyke Acland. The associations participating were the Association of Assistant Masters, the Association of Assistant Mistresses, the Association of Head Masters, the Association of Head Mistresses, the Association of Head Masters of Preparatory Schools, the College of Preceptors, the Head Masters' Conference, the National Union of Teachers, the Private Schools' Association, and the Teachers' Guild of Great Britain and Ireland (with its allied societies, the Birmingham Teachers' Association and the Friends' Guild of Teachers). No resolutions were formulated or put, the idea being simply to have open discussion, with the object of forming public opinion and placing expert views before the Local Authorities on the questions discussed. Mr. J. H. Headlam started the question of the ages at which it is desirable that the transition from primary to secondary schools, and from one type of secondary school to another, should be made. If our secondary education is to be efficient, boys must enter, Mr. Headlam thought, at not later than ten years of age—how much earlier he left to speakers of more experience. Mrs. Dr. Bryant could not see how the children were to be got to come up at earlier ages. Mr. Rowe held that pupils should stay at least four years in elementary schools, and that the assistant master should have most to say as to what boys or girls should be promoted. Mrs. Bryant next opened a discussion on the question of the extent to which the curriculum in one type of school should be correlated with that in other types. The Rev. C. J. Smith, of Latymer Upper School, Hammersmith, was in favour of children at the elementary schools learning enough of English to enable them to fit in better with the work of the secondary schools. Mr. Storr considered it was a mistake to study foreign languages too early, and it was absurd for a child to begin Latin at an early age. A boy beginning his Latin at fourteen would in a couple of years catch up one who had been learning Latin at eight.

In the afternoon, Prof. J. W. Adamson spoke on the best method of discovering the child of scholarship form at the appropriate age of transition from primary to secondary schools. The problem was the discovery, at the immature age of eleven or twelve, of those finer brains in the public elementary school whose natural capacity it was to the interest of the community to cultivate by a prolonged schooling. Notwithstanding the successes at the Universities of boys and girls discovered by its means, the ordinary "paper examination" of large numbers of candidates entailed much waste. The present examination scheme would be more effective if it were less cut-and-dried, and if it included a liberal provision for *viva voce*. It would be still better if entrance were preceded by nomination. The examiners ought to have full discretion. Mr. W. Trevor H. Walsh (of the Kent Education Committee) held that the test must be one of character and intelligence, adapted to the tender age of the candidate, and of such a character as not to admit of cramming. In the first instance, all candidates should be recommended by the primary-school teachers, who should vouch for their ability, diligence, and general good character. Prof. Adams raised the question of the best method of adjusting the elementary pupil-teacher system to secondary schools, and, after some discussion, the Chairman said that in a large proportion of the country there was no adequate supply of secondary schools to take in anything like the number of intending pupil-teachers from twelve to sixteen or eighteen years of age, if we were to look forward to the time when, as he hoped, trained teachers would be sent into all our elementary schools. What, he thought, would be an ideal scheme where there was no adequate local supply either of secondary education or of intending pupil-teachers would be to have a pupil-teacher centre—not too large a one—where it could be arranged to have a secondary school of which the pupil-teacher centre should form an essential part. In the evening, members of the associations were, through the courtesy of the Skinners' Company, entertained at a *conversazione* in Skinners' Hall. Members had a welcome opportunity of inspecting an exhibition of educational books and apparatus, which was open also to members attending the Guild Conference on the two succeeding days.

Teachers' Guild Conference.

A General Conference convened by the Teachers' Guild of Great Britain and Ireland was held at the City of London School

Digitized by Google

on January 12–13. At the opening meeting, Dr. S. H. Butcher, Chairman of the Council, presiding, there was a discussion of the relations of the new Education Committees with schools, especially private schools, and of the Register of Teachers. At the afternoon sitting on the same day Mr. A. H. Dyke Acland, President, in the chair, Sir Oliver Lodge, the new President, delivered his inaugural address. He said his remarks were directed to teachers, to the improvement of schools, and to the needed reforms in education itself. His main thesis was that reform was necessary in the schools of England, and not least in the great public schools. There was no other right and feasible reform of greater magnitude and urgency, as it was in the schools of England that our officials, administrators, rulers, future teachers, pastors, and masters were being yearly trained, and the effect of that training operated like the circulation on the human body. The reform he spoke of was, of course, an intellectual reform; and the fault he had to find with the schools was that the majority of the boys turned out of them were ignorant. They neither possessed knowledge nor did they know how to acquire it, and they had neither interest nor respect for it. They were not ashamed of their ignorance nor were they usually aware of it. The whole process of instruction should be overhauled, methods should be studied and organized and made efficient, and the work should be conducted by trained and enfranchised teachers under improved conditions. The broad features of the methods of instruction at the present time were that they were disciplinary instead of educational. The act of learning was considered more important than that which was learnt. Speaking generally, there was really no attempt made to awaken curiosity and hunger for knowledge. Whatever subjects were taught, for a long time they should be pursued up to a useful point. This was easily illustrated by a reference to modern languages. Of all school subjects which could most easily be brought to a useful point modern languages were foremost. They could be learnt at an early age, and immediately applied to practical ends. The study enabled one to sympathize with and understand foreign nations, and greatly contributed to a successful career. In this country modern languages were not practised for the sake of learning, but were largely utilized as a disciplinary and grammatical study. They were thus added to the burden of linguistic studies, and they gave no pleasure, assistance, or culture, and no practical result when the boys left school. He contended that, in spite of objections, there ought to be a smattering of a large number of things. The beginning of instruction should be properly conducted, as the incompetency of a teacher could make any subject repulsive. In teaching facts to the young the great aim ought to be, not discipline, but interest. In order that a child might make proper progress he should be under an individual teacher for more than a few terms. The child should be taught one subject thoroughly, but he was not prepared to say which. That must depend to some extent on the teacher and the pupil. He contended that human efficiency should be studied to the same end as the efficiency of a machine.

On the second day Mr. J. H. Yoxall, M.P., opened a discussion on the supply of teachers as affected by registration conditions. He contended that by improving the situation and conditions of the profession they would create incentives and attractions to the proper supply of teachers, so that, while a Teachers' Register on proper lines would prevent overcrowding and over-competition and all the public and professional evils which arose from that, it would develop conditions in the profession which would tend to make it more popular and draw to it a better supply of candidates and probationers. The supply of teachers as affected by tenure was discussed on a paper by Dr. W. H. D. Rouse (Perse School). He urged that the Board of Education should be constituted a court of appeal, and the security should be as great as was compatible with the public interests.

The Association of Head Masters.

The annual general meeting of the Incorporated Association of Head Masters was held in the Council Chamber of the Guildhall on January 12–13. On January 12 the Rev. Canon Bell, Principal of Queen's College, delivered the Presidential address. He said that year after year the Head Masters had had the discipline of patience while trying in vain to rouse the attention of the Government and the public to the need of reform in education. But now what a change of scene! What a bewildering variety of movements, meetings, conferences! Mr. Balfour's Education Act of 1902 had called into activity hundreds of bodies engaged with more or less energy and wisdom in effecting some of the reforms which the Head Masters so long and so patiently advocated. There was good reason to congratulate the Association, which, in the weary years of waiting, largely helped to form public opinion and to win acceptance for broad principles of reform. For instance, they might express satisfaction at the successful issue of their efforts in behalf of the tripartite organization of the Board of Education. A very happy outcome of this recent organization was the appointment of Mr. W. C. Fletcher as Senior Chief Inspector of Secondary Schools. They had good reason now to hope for better things than they had got from the late Science and Art Department, and the influence of the Senior Inspector and his staff would be steadily exerted to secure for secondary education many improvements still urgently needed. He would enumerate a few of them: (1) The schools needed freedom to give a well balanced liberal education, without being cramped by unscientific time-tables, or bribed to sacrifice their pupils' true interests. (2) They needed deliverance from the complex network of examinations, and from other defects of the examination system. They had to thank some of the Universities, headed by Oxford and London, which were rendering, or about to render, help in different ways. (3) No efforts must be spared by those interested in education to urge upon the intelligence and the conscience of the nation the pressing need of increased grants from the Exchequer to the Local Education Authorities, earmarked for secondary schools. The demands on them were growing rapidly. Schools could not live without a sufficient supply of well qualified teachers. Warnings had more than once been uttered from that chair that the supply of assistant masters had for some time been steadily dwindling both in number and in quality. There might be several reasons for this decline, but none was more obvious or more scandalous than the lamentably low standard of the salaries of a large proportion of assistant masters in secondary schools. There was one more question to which he must invite their attention—the pressing need of improvement in the teaching of our mother tongue. Complaints came from many quarters, including the Universities and the Army authorities, of the deplorable ignorance of English shown in examinations by candidates from their schools. Before our boys could be better taught, many schoolmasters would have to be converted from the heresy that English could be picked up anyhow without devoting time and care specially to it, and Universities and other training and examining bodies must be urged to lend their help in providing adequate tests and supplying competent teachers of the mother tongue. It was plain that the coming year was destined to exert a momentous influence on the higher education of the country.

The following resolutions, dealing with the Education Act of 1902 in relation to secondary schools, were among those discussed and adopted:—

That this Association welcomes the provision in the new regulations by which candidates for pupil-teacherships in elementary schools are recommended to receive some part of their education in secondary schools.

That this Association is cordially in sympathy with the recommendations laid down in Mr. Morant's memorandum, and is of opinion that the intending pupil-teachers should enter a secondary school at about twelve years of age, remain there for four years as an ordinary scholar, and then receive a two years' additional course as a pupil-teacher under special instruction and partial or continuous attendance.

That grants to secondary schools, whether from the Central or from the Local Authority, should be given in respect of the general work of the school, and not for special subjects, and that they should be considerably increased.

That all secondary schools provided or aided by the Local Education Authority should be administered by governing bodies under school schemes approved by the Board of Education.

On the motion of the Chairman a cordial vote of thanks was passed to Dr. R. P. Scott for his services as Honorary Secretary to the Association from its formation to the present time. Mr. G. W. Rundall, Registrar of the Teachers' Registration Council, stated that the actual number of teachers registered on December 31, 1903, was 4,500.

The Rev. C. G. Gull (Clapton), Chairman of the Committee on Military Training in Schools, mentioned that they had now the distinct recognition of military training in schools by the War Office. Eighty-four schools had been inspected by the War Office in addition to the seventy-four cadet corps established in schools. There had been a considerable improvement in, and extension of, rifle shooting in schools, 134 schools teaching

Digitized by Google

shooting on Morris-tube ranges. He had received a letter from Lord Grenfell, commanding the Fourth Army Corps, stating that he had accepted the suggestion that he should appoint a special officer on his staff with the sole duty of inspecting military training in schools, and intimating that he had appointed to this position Colonel Elliott, who was for some years Secretary of the Lads' Drill Association.

Next day (January 13), after hearing a sermon by the Bishop of St. Albans at the Church of St. Lawrence Jewry, the Head Masters briskly discussed the tenure of assistant masters. Canon Bell moved the adoption of a series of resolutions, agreed upon at a conference between representatives of the Association and the Assistant Masters' Association. They were eventually approved *en bloc* by 49 votes to 17. (See our Leading Article.)

The President made a report on the conference between representatives of Oxford University, the Head Masters' Conference, and that Association with reference to the place of Greek in Oxford University examinations. It was stated at the conference that early in February the Council of the University would submit to Congregation resolutions to the effect that candidates for Honours in Science should be exempted from Greek in the Entrance Examination on condition of presenting an equivalent in science, and also one modern language, either French or German. A good standard of translation and composition, without any set books, would be demanded. Candidates for Honours in Mathematics would present some mathematical work and a modern language. Attention was drawn to the difference between these proposals and those suggested by the Head Masters' Conference in June, and it was answered that opinion in Oxford was not in favour of accepting a modern language test by itself as an equivalent for Greek. After some discussion, the Head Masters present expressed their approval of the Oxford proposals, and any one who was anxious to maintain the study of Greek would observe that, if these resolutions passed Congregation, Greek would really be the easier alternative. In the Scripture Examination the equivalent for Greek would be a fuller knowledge of the subject-matter. Several of the Head Masters strongly urged the necessity of an English test for all candidates at the Entrance Examination, and the Oxford members undertook to report this to the Council. Opinion in Oxford was much divided, and it was not possible to forecast the result of a division; but there was good hope that these very moderate proposals, the outcome of discussions which had lasted for thirty years, would win acceptance.

Mr. W. C. Fletcher, Senior Chief Inspector of Secondary Schools, gave an address on his experiences with the Mosely Commission on Education in America. He spoke of the supply of education in the United States—higher, secondary, and University—the salaries of the teachers, and the results of the work, suggesting, on the whole, cheerful views of English schools in comparison. Other subjects discussed were Co-education, Discipline of Boys, the Organization of Athletics, and Methods of Teaching Arithmetic.

Association of Assistant Masters.

The annual general meeting of the Incorporated Association of Assistant Masters in Secondary Schools was held (January 9) at Mercers' School, Holborn, Mr. G. F. Daniell (Mercers') presiding. Mr. T. E. Page (Charterhouse), the retiring Chairman, moved the adoption of the thirteenth annual report, which showed that the Association was prosperous. The increase of their numbers from 1,500 to 1,650 and the enrolment of 59 new members last month were encouraging facts, but, on the whole, they did not receive that measure of support from the large public schools which they certainly deserved. The condition of education at the present time afforded much ground for hope and some for fear—for hope, because of the increasing interest taken in the subject; for fear, because of a certain want of sturdy common sense in dealing with it. A close grip of facts was rare; yet all educational problems resolved themselves ultimately into two clear ones—what to teach and how to get it taught. With regard to the first, there was complexity and confusion where there ought to be order and simplicity. And how were they to get what was required properly taught? That was the real and central problem, and the key was to be found only in the character and capacity of those who did the work of teaching. If that work was to be well done by able men, there must be three things—better pay, happier terms of tenure, and wise encouragement of merit. The following resolutions were adopted:—

That this meeting welcomes the London Education Act, whereby the London County Council is constituted the sole Authority for all grades of education throughout the county, and trusts that provision will be made for the due representation of secondary teachers upon the Education Committee about to be established.

That this meeting reaffirms the following resolution passed by the Council on September 19, 1903, viz., "That, inasmuch as the I.A.A.M. is fully representative of the assistant masters in the secondary schools of London and is the only association so representative, in the opinion of this Council it should be allowed to recommend a member for election to the Education Committee for London about to be established."

That this meeting deprecates the establishment of higher elementary or secondary schools receiving rate aid in localities where there is already sufficient provision for secondary education, and urges the Education Department to use its powers to prevent such action.

That this meeting is of opinion that in school-leaving certificates the teacher should co-operate with the examiner, and his work should be formally recognized.

The Public-School Science Masters.

The annual meeting of the Association of Public-School Science Masters was held (January 16) at Westminster School, the President (Prof. W. A. Tilden, D.Sc., F.R.S.) in the Chair. The President said science masters had greater opportunities than almost anybody to make educational experiments. There was a great struggle going on among the medical faculty as regarded the position of chemistry necessary in the education of the medical student, and an attempt was being made to stifle a large part of it and to thrust it out of the curriculum. A medical man ought to have a sufficient equipment in chemical knowledge, and the inevitable solution was that every medical student would have to show that he had already learned physics and chemistry before he entered the medical school. Sufficient time, moreover, was not allowed the engineer to enable him to get the necessary equipment. He thought the future of science teaching in this country was looking brighter.

Mr. M. D. Hill said that the scheme they had put forward for the Woolwich and Sandhurst examinations had now been accepted by the majority of the colleges at Cambridge. The science part of the examination would now be as follows:—"Papers and practical work in not more than six subjects—(1) physics, (2) chemistry, (3) geology, (4) the natural history of plants, (5) zoology, (6) the elements of botany and zoology; it being understood that no candidate may take the subject (6) if he take either of the subjects (4) or (5). Of these six subjects candidates must not offer more than two. All candidates will be required to take an elementary paper in chemistry and physics, but those who take the subjects (1) or (2) will be excused the corresponding part or parts of the elementary paper. Candidates who take subject (1) will be required to take an elementary paper in mathematics."

Papers were read by Mr. R. E. Thwaites, Malvern, on "The Possibility of Fusing the Mathematical and Science Teaching of Public Schools," and by Mr. O. H. Latter (Charterhouse) on "Nature Study." Resolutions were passed requesting the Committee (1) "to consider the subject of the certificate examinations of the Oxford and Cambridge Schools Examination Board in the course of the coming year, and, if the state of opinion in the Association be found to warrant it, to approach the Board on the subject"; and (2) "to appoint a sub-committee to communicate with the Preparatory Schools' Association with a view of determining the form of science teaching best suited to preparatory schools."

Technical Education Conference.

A Conference of Teachers, convened by the L.C.C. Technical Education Board, was held on January 7 and 8, at the South-Western Polytechnic, Chelsea, under the presidency of Mr. A. J. Shepheard, Chairman of the Board. There was a large attendance of teachers from elementary and secondary schools and technical institutes. The arrangements for the first day were made in conjunction with the Geographical Association, which had collected maps, globes, slides, and apparatus illustrative of practical methods of teaching geography. There was also an important Art exhibition, including a loan collection of fifteenth- and sixteenth-century herbals and finely illustrated botanical works, together with a number of plant drawings by Ruskin and his pupils. There were also framed examples of reproductions of textiles and other work; and the chemical, physical, and mechanical laboratories of the Polytechnic were open.

The Chairman, who had been to America on the Mosely Commission, spoke of the higher public spirit of American education,

Digitized by Google

its keenness for practical utility, and notably for manual work. His study of it had convinced him that we have a great deal of leeway to make up in the matter of practical education. Mr. Mackinder gave an address on the Development of Geography Teaching out of Nature Study, urging his hearers to abolish from the junior schools all maps, which were the very bane of geographical success, and not to take out the globe, but to point to the great realities of Nature. At the afternoon sitting, Sir John Cockburn in the Chair, papers were read by Mr. P. F. Kendall (Yorkshire College), Mr. J. Lomas (Liverpool), Dr. A. J. Herbertson (Oxford), and Mr. T. Alford Smith (St. Dunstan's College, Catford) on various aspects of geographical teaching.

The proceedings of the second day had been arranged by the Board in conjunction with the Modern Language Association, and modern language teaching was the main subject. The Hon. W. Napier Bruce, who presided at the morning sitting, spoke at length on Old and New Methods and Results; and addresses were delivered by Mr. E. R. Edwards on the Application of Phonetics to Language Teaching, and by Mr. F. B. Kirkman on the Method of using a French Reader. Mr. A. F. Leach, who opened a brief discussion, hoped that the new method would be applied to classics also. At the afternoon sitting, Dr. Heath, who presided, said that, if a large group of schools in the future would know nothing of Greek and little of Latin, the secondary-school boy would have to look for the highest side of his intellectual training to the teachers of English, French, German, and the other spoken languages of the West. Mr. G. G. Coulton spoke on Grammar Teaching, and Prof. Rippmann on Examinations in Modern Languages.

North of England Education Conference.

The second Annual Education Conference of "persons concerned in Primary, Secondary (including Technical), and Higher Education" in the North of England was held at the Yorkshire College, Leeds, on January 8–9. Principal Bodington presided. On the first day, the Training of Teachers was handled in three papers by Prof. Findlay, Mr. A. C. Price (Leeds Grammar School), and Mr. A. J. Arnold (Sheffield Pupil-Teachers' Centre). Prof. Findlay said the existing training colleges—day and residential—should conform to one of three types: (1) those incorporated in Universities should no longer be permitted to retain students who cannot matriculate before entrance; (2) the bulk of the existing colleges should only aim at University degrees by the process of affiliation; (3) some of those established only for women teachers should specialize for infant and lower standard work. Much discussion followed, in the course of which Miss Hale, Principal of Edge Hill Training College, Liverpool, objected to the differentiation of training colleges advocated by Prof. Findlay. "I am sure," she said, "that men would be all the better teachers if they had to pass some time in an infant school. They would receive some training in patience, and have an opportunity of studying the child mind." In the afternoon, Canon Lyttelton led a discussion on the teaching of English, and Prof. Ramsay (Glasgow) discoursed on the methods and aims of classical study. At the Pupil-Teachers' College, art teaching was vigorously discussed, especially in application to manufactures.

The second day was marked by an address from Prof. Sadler on Educational Needs. As to present opportunities and possibilities, he said:

> For what is at present amiss the best remedy will come through the spirit of mutual good will, through the attitude of mind which thinks of national education as the one thing interrelated in all its parts. Nothing helps us so vividly to realize the need for unity of spirit in national education as friendly intercourse between those engaged in different departments of its common work. The practical changes for which such intercourse naturally prepares the way can now be carried out by Local Authorities charged with wide powers over elementary and higher education alike. But nothing short of a strong wave of national enthusiasm for the work of educating the nation's children will ever suffice to sweep away the obstructions which set habit and long neglect and mistaken parsimony still too often allow to choke the channels of passage from one type of school to another. Nor will it be possible to secure the intellectual and social and sound co-ordination of our varied types of schools, or to readjust school curricula and methods of teaching to the new intellectual outlook of the time, unless the prospects of the teaching profession are such as to draw into the service of the schools a steady and sufficient stream of men and women convinced in their hearts that the future welfare of England depends in no small measure on the welfare of her schools, and combining intellectual power with enthusiasm for their task, perseverance, and devotion to the interests of the pupils committed to their charge.

Mr. Harry Coward, F.E.I.S., President of the N.U.T., fresh from the Mosely Commission expedition, read a paper on the Co-ordination of Schools, followed by papers from the Rev. W. H. Keeling (Bradford Grammar School), and Dr. Forsyth (Leeds). Dr. Forsyth summed up the practical needs thus:

> (1) Sufficient funds to raise and to keep up the highest standard of efficiency, not only on the ordinary recognized educational lines, but in experimental testing of new methods. (2) Public sympathy with every form of educational effort—not merely of the spasmodic nature accompanying the discussion of new Education Acts, but a persistent high estimate of the value of education as an important feature of national life. (3) The ideal that education is an organic whole, not an aggregate of separate systems, but one and indivisible—aiming at that general culture which imparts breadth of view and moulds character, and also at that individual consideration of preparatory training for the battle of life. Then, when schools had done their best and shown their best, co-ordination would become the great educational question of the near future.

Commercial Education, Music, and Modern Languages were also subjects of prolonged and earnest discussion.

Directors and Secretaries for Education.

At the annual meeting of the Association of Directors and Secretaries for Education, held at Spring Gardens on January 7, Mr. Percy Elford (Oxfordshire), the Chairman, said many boroughs and counties were finding that all their energies were being devoted to elementary education, and when they had got the elementary schools into good working order, and had arranged for the supply of teachers, practically the whole of the money available for higher education would be absorbed, and there would not be enough for the maintenance in a state of high efficiency of the secondary schools, technical institutes, and the like. Under these circumstances it behoved them, as the educational experts whom the Local Authorities would consult, to consider the matter very carefully. There was a very great need for introducing into the teaching staff of elementary schools a number of teachers, both male and female, who had gone through a wider course of education. There was only one source from which that class of teacher could be drawn, viz., our secondary schools and institutions: but only a few of them were in a position to supply those teachers; so that, to produce the number of teachers required for the elementary schools, besides maintaining or assisting the present training colleges and teachers' centres, the Local Education Authorities must see to the proper equipment and staffing of these secondary schools. To provide sufficient inducement for the best men and women to take up the teaching profession would cost more than the Local Authorities could possibly afford. If the training of teachers, which should be paid for from Imperial, and not local, sources, was to be thrown upon the Local Authorities, they would be absolutely crippled in their endeavours to supply or aid the supply of education other than elementary. It was their duty as Education Secretaries and Directors to insist on higher education being adequately supported and aided.

National Federation of Head Teachers.

The Seventh Annual Conference of the National Federation of Head Teachers' Associations was held (January 5) at the Teachers' College, Sheffield. There was a large attendance of delegates. Mr. T. Thorpe, of Leicester, the new President, said that education was inseparably bound up with the prosperity of our manufacturing pursuits and our various industrial interests, and year by year was more and more essential to their maintenance. For the commercial and industrial advantage of the State there must be no limit set to any child's educational advancement. The great changes designed to take place in the administration of our educational system by the Act of 1902 were slowly being accomplished. The work of co-ordination was no light or easy task, on account of the numerous interests involved. But no interests should be permitted to override the one main consideration, that the interests of the child were paramount. As head teachers they all welcomed with unalloyed satisfaction the recent issue of special regulations affecting the training of teachers, though much they should like to have seen was not even attempted. A perusal of the new regulations and the remarkable prefatory memorandum which accompanied them would convince all that at last the training of the teacher was to be taken in hand seriously and on thoroughly educational lines. Speaking of the shortage of teachers, the President contended

Digitized by Google

that the profession offered few inducements to suitable candidates to go in and remain in. The situation was undoubtedly serious for the schools, but the solution was a simple one and purely a matter of business. An adequate supply of candidates would soon be forthcoming if the ultimate salaries to be obtained were sufficient and the wear and tear were reduced by better conditions of service.

University Women Teachers.

The annual meeting of the Association of University Women Teachers was held (January 16) at Bedford College, London. The number of ordinary members was reported to be 1,291, and of life members to be 95. Miss Maitland, Principal of Somerville College, in her presidential address, urged the need for more women on the Local Education Committees, and the importance of impressing more deeply upon public bodies generally the views of women teachers of University experience.

Assistant Mistresses in Secondary Schools.

The twentieth annual meeting of the Association of Assistant Mistresses in Public Secondary Schools was held at Notting Hill High School on January 12. Miss Laurie (Cheltenham Ladies' College), President, in the chair. Miss Laurie dealt chiefly with the Education Act of 1902 and its effect on secondary education. The other main subjects of discussion were the conditions of tenure, the overcrowding of the time-table, and specialization.

The Private Schools' Association.

At the annual meeting of the Private Schools' Association, held at the College of Preceptors (January 13), Dr. Sibly, of Wycliffe College, Stonehouse, the President, said this and the following year would determine the future of private schools' interests. They had to guard against unintentional harm. The Government, while protesting against foreigners dumping goods on the country, was dumping education—by underselling them in the market of education. They were actually destroying one of the great "industries" of the country. The danger was lest all education should drift into the hands of the State; and ruin would be the result if this came about. In conclusion, he protested strongly against the Government sacrificing the livelihood of tens of thousands of people. The State had recognized not only corporeal property, but uncorporeal property; and half of the education of this country was done by private schools.

The Friends' Guild of Teachers.

The annual conference of the Friends' Guild of Teachers was held at Saffron Walden School on January 5–7. The Presidential address of Susanna E. Wells (summarized in the January issue of the *British Friend*) dealt with "The Educational Problem of the Society of Friends," with special reference to anticipated measures of reorganization. Among other matters of discussion was the problem of "Co-education," which was introduced by the Rev. Cecil Grant, of Keswick, in an earnest address treating education as a religious question and urging the helpfulness of co-education. The feeling seemed to be against the introduction of the system in the upper-grade schools, from motives of economy, before experiment warrants it on educational and on moral grounds. The Society has recently constituted a Committee of Education, and appointed its two secretaries as educational officers, with a view to active developments in its own sphere.

UNIVERSITIES.

(From our own Correspondent.)

Oxford.

The frost and east wind which greeted our return to Oxford somewhat damped our enthusiasms, but the Greek and anti-Greek meetings were speedily convened by the more energetic. At the moment of writing the sturdiest Greek seems to be overwhelmed by gloomy forebodings and to anticipate defeat here and then capitulation also by Cambridge. He reasons as follows:—On the last occasion the majority for Greek was not very great; since that time a kind of "cave" has been formed of those who, while professedly champions of Greek and believing in its holding its own among those who seek for a general education, seem ready to exclude from its influence the professed specialist in science or mathematics. On the former occasion these voted with the Greeks; now from the wording of the new scheme they will be folded with the anti-Greeks when it comes to the question of a vote Aye or No.

It must be confessed that the mere philosophic onlooker cannot understand why Oxford is so terribly anxious to spread her net wider to include those who could and do get a good science training on their own lines in the newer Universities. It is hardly a commercial question: the colleges are still well supplied with men, and most of them can still pick and choose at matriculation. The University does, indeed, proclaim itself to be hard up, but, as a matter of fact, the condition of things has to no small degree been brought about by the demands of Natural Science for buildings and plant and teachers. The cost to the University of the science students is very considerably in excess of that of the larger majority of other students, and, except colleges build more new buildings, we cannot increase the former to any very appreciable extent without diminishing the latter. Moreover, we believe that the quality of the science men we turn out under the present circumstances compares favourably with the standard achieved by the "technical" establishments. Why should we not then stick to our standard instead of descending into the arena as competitors with these establishments?

The mention of science suggests the fact that there is a "very pretty" quarrel going on just now over the Regius Professorship of Medicine, lately resigned by Sir John Burdon-Sanderson. The post is not a very well paid one—worth, perhaps, some £500 a year—but it is a position of considerable importance in the world of medicine, and it could and can be held simultaneously with a private practice. Certainly Sir Henry Acland in his day had a wide practice, and indeed it was said that it was not respectable to die without at least calling him in.

Apparently some of the science professors, thinking that a good outside man would not be enticed to Oxford by the income of the Professorship, decided that it would be better to give the post to one of their existing teachers—in fact, to the Reader in Pathology.

The Vice-Chancellor was approached and then Mr. Balfour, and everything seemed *en train*, when the news spread from Oxford to London. Then the Oxford medical men considered that the plan was an unworthy one, bearing in mind the position of the professorship, and that there were Oxford men of sufficient note in the medical world worthy to be considered in competition with one who is, after all, an Edinburgh man, and only a recent importation into Oxford. They held a meeting and memorialized Mr. Balfour. So, we believe, the matter stands now.

We confess that we do carry our "free trade" principles to an extreme limit, for we seem to put an embargo on our own productions. In the appointment to the Corpus Professorship of Jurisprudence we went further still by excluding British-born and calling in a Russian. No doubt the new Professor is a distinguished man, and circumstances have conspired to bring his name before the public, but certainly the English School of Jurisprudence is of sufficient reputation to be able to provide a teacher for an English University.

We are consumed with curiosity to know what Pusey House will do with its recent large legacy. It seems as if the legacy might have been better directed and yet have served its purpose. Pusey House is not a great teaching establishment; excluding its librarians, there cannot be more than one or two students. If the scheme was to benefit the High Church party, a legacy to Keble College would have been much more effective.

At the moment of writing term has only just commenced, and therefore, it is rather hard to chronicle movements and factions before they have had time to develop.

Before the next number appears we shall have played Cambridge both at Association football and at hockey. The former match we seem likely to lose, but, after the experience of the Rugby match, the Cantabs cannot feel too confident.

The 'Varsity eight is in process of formation: the President, Monier-Williams, is not stroking this year; at any rate, at present Graham occupies that position. The crew is not without promise, and is certainly physically strong. A great many torpids are shivering up and down.

Cambridge.

THE term has indeed opened in gloom. Hardly had the residents begun to return when universal sadness was caused by the news of the death of Lord Braybrooke, Master of Magdalene. For more than fifty years successive generations of University men have experienced the unfailing kindness, the keen sympathy, and the gentle courtesy of a man who, it is no mere form of words to say, was universally beloved and as universally respected. The outside world, from the King to the labouring man, have testified their affection for the late Master, and those of us who here have had the privilege of close association in academic work know that the University has lost one of the most memorable of her sons.

The succession to the Mastership, as is generally known, is in the disposal of the new Lord Braybrooke, who, if he does not himself assume the duties of the position, as many hope he will do, may be trusted to select one who will emulate and profit by the great example of the blameless life which has passed away.

Another sad event has occurred in the death of Mr. G. S. Budgett, of Trinity, one of our most rising biologists. Elected to a Balfour Studentship, he engaged in research work which led him to Nigeria, where, in the course of his scientific investigations, he was struck down by malarial fever, and, though he was able to return to Cambridge, it was only to die. He will be sincerely mourned by a large circle of friends, and especially by the men of the mounted section of the University Volunteers, whose lieutenant he was.

The Engineering School has sustained another serious loss. Prof. Ewing, during his brilliant tenure of office, was peculiarly successful in attracting to his school men of the greatest capacity; the Government found out the Professor's merits, and took him away from us to the national gain, but to our loss. Now one of the most rising of the assistants in the school has been selected for the important work of supervising technical education in New Zealand. Mr. W. S. Latrobe, after a career of unusual distinction as a student and teacher, leaves us at the end of this term for his new post. Doubtless some University will before very long realize that it would be wise to ask him to return, as engineers of his calibre are not to be found at a moment's notice.

The new arrangements under which University candidates are to enter the Army have been made known to the world through the medium of the Press. The late Secretary for War stated most distinctly that it was desired to encourage University men to enter the Army, and also that the existing regulations as to age and examinations put such candidates at a disadvantage in regard to seniority, as they entered the service practically three years later than those who went in *viâ* Sandhurst. To obviate this inconvenience he sketched a plan by which the evil was to be avoided. Put quite briefly, the plan was to select the candidates during their University career, and allow for seniority the time passed between such selection and actual entry into the Army: in other words, time spent at the Universities under specified educational conditions would count as Army service. This seemed practicable and reasonable.

The new scheme carries out Mr. Brodrick's views in a peculiar way. All candidates must first graduate, and afterwards pass a qualifying military examination, actual selection among the candidates being made by a Board of Electors. An excellent plan, but the evil to which Mr. Brodrick alluded is intensified; for, under the old regulations, one year's residence only was required, while three will be requisite under the new scheme. It is true that a sop is thrown to the First Class Tripos man, who is graciously given a year's seniority as a reward for being a good boy. It would be interesting to discover how many First Class Honour men have entered the Army by examination during the past ten years—possibly two or three, certainly not half a dozen. Except on this one point, the scheme will produce excellent results; but, as long as age limits for rank exist, no man without private means would care to face the risk of entering the service in peace time, with a likelihood of being cast adrift upon the world with a meagre pittance at an age when a new start is impossible. The difficulty could be arranged in a five minutes' chat with the Secretary of State; but the tortuous mazes of the War Office cannot be threaded by the mere civilian.

A very sensible alteration is to be made in the General Examination. At present, Algebra is a subject in the "Little-go," and also in the following examination: it is proposed to do away with it in the General, and to substitute Dynamics. In spite of criticisms in certain quarters, there is little doubt that our poll examinations are now on a sound basis and are sensibly conducted by the responsible authorities. When an examination in military subjects has been added to the list of specials, as undoubtedly would be wise in order to carry out effectively the new War Office scheme, the whole of our examination system may be able to stand without alteration for a few years at least.

London.

IN the projected Institute of Medical Sciences it is proposed that accommodation adequate for 500 students should be provided in connexion with the teaching of anatomy, physiology (including pharmacology), biology (zoology and botany), chemistry, and physics. The cost of building and annual expenditure on staff and service are estimated as follows:

	Cost of Building.	Annual Expenditure on Staff and Service.
Anatomy	£50,000	£5,500
Physiology (including Pharmacology).	50,000	7,000
Biology (Zoology and Botany)	25,000	2,700
Chemistry }	35,000	{ 2,600
Physics }		{ 1,700

Representatives of the London hospitals have addressed a letter to the Chancellor of the University (Lord Rosebery) expressing satisfaction that an appeal has been issued for funds to build and endow an institute of medical sciences under the control of the University, and declaring their conviction that the concentration of the teaching of the preliminary subjects of the medical curriculum under the University has become a matter of urgent necessity in the interests alike of medical education, of the hospitals, and of the medical schools.

The inaugural meeting of the Central Association of University Students was held at the University (January 6), Dr. R. D. Roberts, Registrar of the University, in the chair. Dr. Roberts thought the founding of the Association was a very important step in the development of University Extension work, and explained the recently adopted scheme of study for a new and more advanced certificate.

Progress is being made with the housing of the Library. At a meeting of Convocation (January 18) a resolution was adopted expressing satisfaction with arrangements in process of execution, deprecating any further dispersal of the books, and urging early provision of adequate accommodation; and it was stated that the Senate was likely to agree to a recommendation that the Library should be catalogued and proper shelves provided at the cost of the University.

The Foxwell Library was reported as fairly on the way to be settled in the University; and Convocation passed a vote of thanks to the Goldsmiths' Company for their generosity thereanent.

The Senate has resolved that the fees of candidates who withdraw from any examination before the last day of entry for that examination be returned to them; that candidates who do not present themselves for an examination be allowed to enter when that examination is next held on payment of half the ordinary fee; and that no remission of fees be made to candidates who withdraw after presenting themselves for examination.

Birmingham.

THE report of the Principal to the Council states that the total number of undergraduates on the register at the end of the session 1902-1903 was 221, distributed as follows:—Science, 69; Arts, 57; Commerce, 6; Medicine, 89—total, 221; as against 191 in 1901-2. The number of students other than undergraduates was 586, as against 475 in 1901-2. On the subject of education, the report states that Prof. Hughes is vigorously taking up his organizing work. The temporary Chair of History has been very successful, but the School of Modern Languages has not yet attracted the attention that was expected. The Principal reports an increase in the number of students for the present session in all departments, though chiefly (as was to be expected) in the subjects of engineering and chemistry. He believes that a scheme for residential hostels for men and for women students respectively is now becoming urgent, and that many of the Local Education Authorities in the district would be willing to co-operate and give financial aid for a residential hostel. The new Department of Mining began work at the opening of last session and was attended by ten students. Another subject that the Principal is anxious that the University should add to its list is agriculture, especially as regards development on its biological side.

Manchester. In the Department of Education Prof. Sadler will continue his lectures on American and English Education on Wednesday evenings and Saturday mornings during the month, the Saturday class being open to discussions. From January to June, Mr. H. Thiselton Mark will lecture on the History of Education; and briefer courses on Curricula of various Types of Schools by Miss Catherine Dodd, by Miss Burstall (Head Mistress of the Manchester High School for Girls), and by Mr. J. L. Paton (High Master of the Manchester Grammar School), will be given from time to time.

Wales. The Swansea Technical College having applied for recognition as a college in which students might pursue courses of study for degrees of the University of Wales in science, pure and applied, the Court (January 22) unanimously resolved that the appeal could be best met "by an extension of the charter that will give the University power to admit to certain privileges any institution possessing adequate facilities in point of equipment and staff for the teaching covering the whole course of work for an initial degree in any faculty, these privileges being at least those of presenting candidates for degrees in that faculty under Article 14 of the charter." The Standing Executive Committee were requested to draft a supplementary charter for presentation to the Privy Council and to arrange for a visitation to the Swansea College by outside experts to report to the Court on its position and equipment.

Edinburgh. The annual report shows that during the past year the total number of matriculated students (including 300 women) was 2,990 — the highest number reached for ten years. Of this number 873 (including 263 women) were enrolled in the Faculty of Arts, 238 (including 6 women) in the Faculty of Science, 50 in the Faculty of Divinity, 352 in the Faculty of Law, 1,451 (including 14 women) in the Faculty of Medicine, and 26 (including 17 women) in the Faculty of Music. Of the students of medicine 677, or over 46 per cent., belonged to Scotland; 333, or nearly 23 per cent., were from England and Wales; 118 from Ireland; 72 from India; 232, or about 16 per cent., from British colonies; and 19 from foreign countries. The number of women attending extra-academical lectures, with a view to graduation in Medicine in the University, was 101.

Although the Carnegie Foundation has not as yet had an appreciable influence in increasing the aggregate of students, the number of those availing themselves of the section of the scheme that provides for payment of class fees has during 1903 been higher than formerly, and it is noticeable that many of these students take out a larger number of classes than they would probably otherwise have done.

As the allocation made to the University from the Carnegie Trust is inadequate to satisfy all its present requirements, an appeal is being made to the public for subscriptions to a fund "for the further development and extension of the University in the direction more especially of a proper provision for the erection and maintenance of laboratories for physics and engineering, for a more extended training in modern languages and the subjects of commercial education, for facilities for research, for improved tutorial instruction, and for the Library."

Glasgow. According to the annual report for 1903 the number of matriculated men students was 1,798, and, of these, 103 were for the summer session; and the number of matriculated women students was 360, of whom 24 attended the summer session. There were thus in all 2,158 students during the year. The students matriculated in the Arts Faculty numbered 949; in Medicine, 726; Science, 213; Law, 190; and Theology, 57.

Queen's College, Galway. The annual report shows 118 students (as against 93 in 1901–02)—the largest number during the last twenty years, with the exception of 1889–90 and 1893–94, when the numbers were 122 and 120 respectively. Of these 118 students, 57, or almost one-half, came from the province of Connaught and 33 from the province of Ulster, showing that the allegation that most of the students come from Ulster is unfounded. Of a total of 47 scholarships awarded, 26 were gained by students from the counties of Galway, Roscommon, Longford, and Clare, 17 being awarded to students from the county of Galway alone.

CURRENT EVENTS.

Fixtures.

A Course of Twelve Lectures on "The Psychological and Logical Foundations of Intellectual Education," by W. E. Johnson, M.A., Sidgwick Lecturer in Moral Science in the University of Cambridge, will commence at the College of Preceptors, on Thursday, February 25. The Lectures will be given on successive Thursday evenings.

* * *

The remaining four Lectures of Prof. Rippmann's Course on Elementary Phonetics for Teachers of English, French, and German will be delivered at the College of Preceptors, on February 12 and 26, and March 11 and 25.

* * *

The next Evening Meeting of the Members of the College of Preceptors will take place on Saturday, February 20, at 5 p.m., when Prof. J. W. Adamson, B.A., will read a paper on "The Teaching of the Mother Tongue."

* * *

Mme. de Pontevedra will address the Société nationale des Professeurs de Français en Angleterre at the College of Preceptors on February 27, at 4 p.m., on "Quelques Contemporains."

* * *

The Rev. Dr. E. Moore will deliver the Barlow Lectures, on Dante's "Paradiso," at University College, London, on February 10, 11, 17, 18, 24, and 25, at 3 p.m. Open.

* * *

Prof. J. G. Robertson, M.A., B.Sc., Ph.D., will continue his course on Schiller's Life and Work, at King's College, London, on Thursdays at 4.30 p.m., ending on March 24. Tickets (5s. for whole course) from the Secretary, King's College, W.C.

* * *

The Rev. Septimus Buss, LL.B., will lecture on subjects bearing on the Education Acts at the church of St. Anne and St. Agnes (Gresham Street) on Wednesdays during February at 1.15 p.m.

* * *

Under the auspices of the L.C.C. Technical Education Board courses of ten lectures, free to teachers, will be given (1) on "The Natural History of Plants," by Prof. Geddes, of University College, Dundee (St. Andrews University), and (2) on "The Natural History of Man," by Alfred C Haddon, M.A., D.Sc., F.R.S., University Lecturer in Ethnology, Cambridge, at the Horniman Museum, on Saturdays, at 11.30 a.m., from now on to May. Tickets from the Clerk of the L.C.C., Spring Gardens, S.W.

* * *

Names of candidates for the L.C.C. Intermediate County Scholarships (70 "ordinary" and 20 "commercial") must be sent to the Secretary of the Technical Education Board (upon forms to be obtained at the Board's office, 116 St. Martin's Lane, W.C.) by April 30. Examination begins June 2.

Names of candidates for the L.C.C. Horticultural Scholarship (£60, open to young women of sixteen to twenty, tenable at Swanley Horticultural College, and renewable for a second year) must also be sent (on special forms, as above) by April 30.

Names of candidates for the L.C.C. Shoreditch Technical

Digitized by Google

Institute Scholarships (25, providing free instruction at the day school attached to the Institute, with maintenance grant of £10, £15, or £20, and open to boys not under thirteen on September 1), to be awarded in July, must be sent (on special forms, as above) by April 30.

Candidates for the L.C.C. Evening Exhibitions in Science and Technology (200, value £5 a year), to be awarded in June, must apply (on special forms, as above) by February 29.

Applications for the L.C.C. Senior Scholarships (5, value £60 a year for three years, in addition to payment of college fees up to £30 a year) and Senior Exhibitions ("a certain number"), to be awarded in July; for the L.C.C. Junior Scholarships in Practical Gardening (7, providing free instruction at the Royal Botanic Society's Gardens, with maintenance grant of £20–£25, open to boys of fourteen to sixteen), to be awarded in July; for the L.C.C. Scholarships for Blind and Deaf Boys and Girls (6, free instruction, with maintenance grant of £10 or £20, age fourteen to seventeen on June 1); for the L.C.C. Scholarships for Crippled Boys (6, same conditions); and for the L.C.C. Scholarships for Crippled Girls (6, same conditions) must all be made by May 14, on forms to be obtained from the Secretary of the Technical Education Board, 116 St. Martin's Lane, W.C.

* * *

THE Board of Education, in co-operation with the Council of the Society of Arts, intend, during the present year, to hold, in the Victoria and Albert Museum, South Kensington, an Exhibition of Engravings produced by mechanical means (such as photogravure and other photographic processes) as a sequel to the Exhibition of Engraving and Etching held during last summer; and, as great advancements have been made in printing in colours since the Exhibition of Modern Illustration in 1901, specimens of colour printing will be included. A Committee, of which Sir William de W. Abney, K.C.B., F.R.S., will act as Chairman, has been formed to advise the Board in carrying out the exhibition. All communications should be addressed to the Secretary, Exhibition of Mechanical Engraving, Board of Education, South Kensington.

* * *

THE Bath and West and Southern Counties Society will hold a Nature Study Exhibition in connexion with its annual meeting at Swansea in May. It invites educational authorities and institutions to send collections, models, &c. Particulars from Mr. T. F. Plowman, 4 Terrace Walk, Bath.

* * *

THE inaugural *conversazione* in connexion with the Artist Division of the Hampstead Conservatoire (Swiss Cottage) will take place on February 11 at 8.30 p.m.

* * *

LORD KELVIN will present the certificates and prizes at the annual prize distribution and *conversazione* at the Northampton Institute, St. John Street Road, E.C., on February 26.

* * *

THE Fédération générale des Instituteurs Belges will utilize the occasion of the Liège Exhibition in 1905 to hold an International Congress on Primary Education. Secretary: M. P. Cnudde, Syngem, Belgium.

* * *

THE L.C.C. has decided to administer the London Education Act as from May 1, the Education Committee to consist of thirty-eight members of the County Council, five women, and five members of the present School Board.

Honours. PROFS. EMIL FISCHER and Adolf Kirchhoff, of Berlin University, Lord Rayleigh, and Prof. Adolf Mussafia, member of the Vienna Academy of Science, have been appointed Knights of the Order Pour le Mérite for Science and Art.

Endowments and Benefactions. THE Finance Committee of the Liverpool Corporation have voted £10,000 as a grant to Liverpool University, to be paid out of a city rate of 1d. in the £.

* * *

THE Clothworkers' Company have voted £1,000, payable in five yearly instalments of £200, to King's College Hospital Removal Fund; the Merchant Taylors' Company, 1,000 guineas in instalments during two years; and Lord Ashcombe has promised £500.

* * *

THE Secretary of State for India in Council has sanctioned a grant of £300 a year to the Indian School and Oriental Languages Department at University College, London.

* * *

IN addition to the £2,000 given by Mr. Walter Palmer, M.P., and the £1,000 given by Mr. G. W. Palmer, to the Physiological Laboratory of London University, Mr. Alfred Palmer, J.P., has given £1,000 conditionally upon the establishment of the Laboratory upon a permanent basis.

* * *

MRS. WINBOLT has offered to the University of Cambridge £500 to found an annual prize in civil engineering, in memory of her late husband, Mr. John Steddy Winbolt, M.A. Trinity College.

* * *

MR. JOHN ARTHUR KENRICK has given a further donation of £3,500 to the endowment fund of the University of Birmingham.

* * *

THE West Riding County Council has agreed to grant £6,000 to the Yorkshire and Sheffield Colleges in view of their becoming Universities, the apportionment to be hereafter determined. The first instalment will be paid "so soon as a reasonable increase of payment by the State shall be made as promised"!

* * *

MISS TALBOT, of Margam Abbey, Glamorganshire, has promised £1,000 to the endowment and extension fund of St. David's College, Lampeter.

* * *

THE Pusey Library at Oxford is expected to obtain some £70,000 under the will of the late Mr. John William Cudworth, of Leeds.

* * *

PRESIDENT HARPER recently announced fresh donations of the value of some 3,000,000 dols. to Chicago University. Of this sum 1,850,000 dols. were from Mr. John D. Rockefeller, and 1,096,466 dols. from an anonymous donor, generally identified with Mr. Rockefeller.

Scholarships and Prizes. THE University of London offers five University Scholarships—in Classics, Mathematics, Chemistry, Economics, and History—£50 each, tenable one year, open (in 1904) without limit of age to candidates that have passed the Intermediate Examination and that are of not more than two years' standing in the University in the June preceding the examination.

* * *

TRINITY COLLEGE, DUBLIN, has founded an annual King Edward Prize, in commemoration of the King's visit last year.

Appointments and Vacancies. MR. W. C. FLETCHER, Head Master of the Liverpool Institute, has been appointed to the new office of Chief Inspector of Secondary Schools.

Mr. Fletcher was Second Wrangler in 1886; Fellow of St. John's

Digitized by Google

College, Cambridge; nine years a master at Bedford Grammar School (specially concerned with the modern side in the Army classes); and, since 1896, Head Master of the Liverpool Institute. As Chairman of the Examinations Committee of the Head Masters' Association, he has had special opportunities of watching the development of secondary education.

Mr. C. A. Buckmaster, Acting Senior Chief Inspector at South Kensington, has been appointed Chief Inspector of Schools under the branch of the Board of Education that deals with evening schools, technology, and higher education in science and art.

* * *

THE Professorship of Arabic in University College, London, is vacant by the lamented death of Prof. S. A. Strong. Mr. Strong was also Librarian to the House of Lords and to the Duke of Devonshire. He was only forty.

* * *

DR. W. A. OSBORNE, M.B., B.Ch., D.Sc., Scientific Assistant for Examinations in Biology in London University, has been appointed Professor of Physiology and Histology in the University of Melbourne, in succession to Dr. C. J. Martin, F.R.S., now Director of the Lister Institute of Preventive Medicine.

* * *

MR. H. CROWTHER, B.Sc. (Vict.), has been appointed science master at Sexey's Trade School, Bruton.

* * *

MR. F. W. ARMSTRONG, A.R.C.S., has been appointed science master at the Wells Boys' Blue School.

* * *

DR. MERRY will retire from the Rectorship of Dundee High School at the end of the session.

* * *

MR. PERCY ALDEN, M.A., Hon. Warden of the Mansfield House Settlement, has consented to act for a time as Organizing Secretary to the Friends' Union for Social Study.

* * *

MISS RATTRAY, third science mistress at the Datchelor School for Girls, has been appointed chief teacher of science at the Lady Holles' School, Hackney.

* * *

MISS BIGBY, B.Sc., recently science mistress at Wallington County School, takes Miss Rattray's place at the Datchelor School for Girls.

Literary Items.

THE REV. J. ARBUTHNOT NAIRN'S edition of "The Mimes of Herodas," which we announced in our October issue as in preparation, is promised immediately by the Clarendon Press. It will be furnished with introduction, critical notes, commentary, and collotype illustrations.

* * *

THE Clarendon Press announces a thorough revision of Liddell and Scott's Greek-English Lexicon under the editorship of Mr. Arthur Sidgwick. It is hoped that scholars will send in their corrections and additions.

* * *

THE Clarendon Press promises during the spring "Elizabethan Critical Essays," edited by Mr. G. Gregory Smith, Lecturer on English Literature in the University of Edinburgh, in two volumes (uniform with Prof. Ker's "Essays of Dryden"), the texts thoroughly collated with the original editions and fully annotated, and an introduction on the origins of literary criticism in England.

Mr. Frowde also has in hand a standard edition of the complete works of Ben Jonson, probably nine 8vo volumes in all (uniform with the recently published editions of Kyd and Lyly), by Prof. C. H. Herford and Mr. Percy Simpson, the latter of whom has been engaged for some ten years on a critical examination of the text.

MESSRS. LONGMANS announce the Autobiography of the late Prof. Bain.

* * *

THE Board of Education has issued a "Report on the School Training and Early Employment of Lancashire Children," by Messrs. E. T. Campagnac and C. E. B. Russell (Cd. 1867, 3d.), as a supplement to Vol. VIII. of "Special Reports on Educational Subjects." It deals with the question of how best to fit primary-school boys for their life's work, and how to better their present haphazard method of obtaining employment.

* * *

THE Orient Press (168 Fleet Street, E.C.)—formerly the Primrose Press—has just commenced the issue of a shilling series of versions of the great Oriental religious and literary works under the general title of "The Wisdom of the East." Dr. S. A. Kapadia, Lecturer on Gujarati at University College, London, is the general editor.

* * *

MESSRS. WILLIAMS & NORGATE'S new "International Book Circular" (No. 137) affords a ready view of the most recent literary and scientific works, especially in foreign literature (6d.).

* * *

A HANDY bibliography of Child Study for the year 1902 (344 entries) is given in the December number of the *Pedagogical Seminary* (Kegan Paul, Trench, Trübner, & Co.).

* * *

HISTORICAL students should make a note of the first article in the January number of the *Independent Review* on "Land Monopoly." In view of the coming struggle against land monopoly, the writer says: "It is of the first importance that the nation should realize that the landowners' appeal to history is utterly and absolutely rejected by the facts of history." In the same number literary students will find a delightful account of "The Meanest of Greek Tragedies" (the "Electra" of Euripides), with charmingly skilful translations, by Dr. Gilbert Murray. "The Classics as they might be" will be expounded in the February number by Mr. A. W. Pickard-Cambridge.

* * *

LITERARY readers will find an elaborate "Essai de Littérature comparée" on "Swinburne et la France" in the *Revue de l'Université de Bruxelles* (Janvier) by M. Paul de Reul, who pronounces Mr. Swinburne to be "la première force assurément de l'Angleterre lyrique depuis Shelley—un Shelley moins éthéré, moins pur, mais ralliné, stylisé par les mouvements préraphaélite et esthétique."

* * *

THE *Monthly Review* for January gives a most interesting article by Mr. John Ward, F.S.A., on "The Reconstruction of Karnak," with fine illustrations; also a pleasant paper on "Tennyson and Dante," by the President of Magdalen.

* * *

IN the second number of the *Scottish Historical Review* a first paper on "The Municipal Institutions of Scotland," by Sir J. D. Marwick, a study of "The Bannatyne Manuscript," by J. T. T. Brown, and a fresh examination of "The Fiscal Policy of Scotland before the Union" (worthy of the attention of Mr. Balfour and Lord Rosebery alike), by Dr. W. R. Scott, are all notable articles; and the documents, notes, replies, &c., record much historically valuable matter.

We record with regret the death of Mr. George Richardson, second master at Winchester, after twenty-six years' able service.

COLLEGE OF PRECEPTORS.

HALF-YEARLY GENERAL MEETING.

The ordinary half-yearly General Meeting of the Members of the Corporation was held at the College on Saturday, January 23.

The Secretary having read the advertisement convening the meeting, Dr. Wormell was appointed Chairman.

The Report of the Council was laid before the meeting, and was taken as read, a copy having previously been sent to every member. It was as follows:—

Report of the Council.

The Council beg to lay before the Members of the College the following Report of their proceedings for the past half-year:—

1. They have to report that the number of candidates entered for the Christmas Certificate and Lower Forms Examinations is about 8,500, showing an increase of about 300 as compared with the corresponding Examinations last year. At the Midsummer Examinations the number of entries was 5,550, making a total for the year of over 14,000, an increase of about 550. The increase is especially noticeable in the Colonial Centres, which are now established in Ceylon, N.W. India, the West Indies and Demerara, Argentina, North China, West and South Africa. Among the newest Centres are Johannesburg and Bloemfontein, where examinations on a comparatively large scale have now been held for the first time. The continued extension of these Examinations may be taken as an indication that the scheme in its present elastic form does not interfere with the ordinary work of the schools.

2. The Professional Preliminary Examination for intending Medical Students and others was held in the first week in September, and was attended by 218 candidates, a smaller number than entered for the September Examination in 1902; on the other hand, the entries for the March Examination showed a considerable increase as compared with the preceding March Examination, and the total for the year is in advance of that for 1902.

3. For the Christmas Examination of Teachers for the College Diplomas no fewer than 583 candidates have entered, being an increase of 68 on the number of entries for any previous Diploma Examination conducted by the College. The Examination will be held in London, and at the following local centres:—Birmingham, Bristol, Leeds, Manchester, Newcastle-on-Tyne, Plymouth, Alnwick, Blackburn, Croydon, Hartlepool, Hayle, Jersey, King's Lynn, Laxfield, Morwenstow, Stornoway, Truro, Worthing, Buenos Ayres, Freetown (Sierra Leone), Worcester and Durban (South Africa), and Hong Kong. In 1904 the Examination will be held at the beginning of September instead of in July as heretofore.

4. In addition to their own Examinations of pupils and teachers, the Council have conducted during the past half-year the Examination and Inspection of a number of Schools by Visiting Examiners and Inspectors.

5. The Thirty-second Annual Series of Lectures to Teachers on the Science and Art of Education, which commenced on the 26th of February with a Course of Twelve Lectures on "The Development of Faculty," by Professor C. Lloyd Morgan, F.R.S., was concluded on the 17th of December with the last of a Course of Twelve Lectures on "Practical Problems in School Organization and Teaching," by Professor J. Adams, M.A., B.Sc., F.C.P.

6. In their last Report the Council announced that, in response to numerous suggestions received from members, they proposed to vary somewhat the character of the Members' Meetings by providing for short discussions on questions of immediate practical interest to teachers, and also for gatherings in which the social element was more distinctly recognized. At the Meeting on the 21st of October, accordingly, there were discussions on two separate subjects—"The Teaching of Geometry" and "Rewards and Punishments in Schools." The second Meeting took the form of a Conversazione, and was held on the 21st of November. The large number of members and their friends who attended both these gatherings, and the manifest interest taken in the proceedings, showed that the new departure was fully appreciated.

7. The Council note that the Consultative Committee have now under their consideration the question of Examinations for School-leaving Certificates, and are taking evidence on the subject.

8. The action of the Board of Education, referred to in the last Report, in admitting to the Register teachers of ten years' standing who can produce satisfactory evidence of ability to teach, has had the effect of adding to the Register a considerable number of deserving teachers who do not possess all the required academic qualifications, and the number of names registered in Column B now amounts to about 4,500.

9. It will be seen, from the accompanying statement of accounts, that the finances of the College are in a satisfactory condition. The Council have been enabled to meet the expenditure entailed by the working of the new scheme of Inspection, as well as that necessitated by extensive decorative repairs to the College building, without reducing the amount of the floating balance.

10. During the past half-year the Diploma of Licentiate has been conferred on 18 candidates, and that of Associate on 86, who had passed the required examinations. Twenty-four new members have been elected, and notice has been received of the withdrawal of two. The Council regret to have to report the death of the following members of the

Digitized by Google

College:—Sir Joshua Fitch, Mr. J. N. Bissell, A.C.P., Mr. G. W. Gilmour, Mr. J. R. Storrar, Mr. F. W. Warren, A.C.P., and Mr. A. Watt.

With regard to the question of school-leaving certificates referred to in paragraph 7, Mr. BAUMANN expressed the opinion that, in view of the great diversity of our educational machinery, much time must elapse before a State system of leaving certificates analogous to that at present in existence in Germany could be introduced into this country. He pointed out that in Germany school-leaving certificates qualified the holders for entrance into the Civil Service and also into the professions, including the Army and Navy.

Mr. PINCHES said that the question had been referred by the Board of Education to the Consultative Committee, who had for some time past been collecting information bearing on the subject from educational experts and authorities. Up to the present time the purview of the inquiry had not embraced the substitution of a new machinery for that of the Civil Service Examinations, but rather aimed at the unification of the tests at present imposed on candidates for entrance to certain professions. The idea, he believed, was to introduce into the other parts of the United Kingdom a system which had for some years obtained in Scotland, under which there were three grades of certificates, one for elementary schools and two higher grades for different classes of secondary schools. The matter had been considered by a Committee of the Council, who had been in communication with the Consultative Committee on the subject, and it was anticipated that, if evidence was to be taken from the bodies conducting the various local examinations, the Council of the College would be invited to send representatives to express their views.

Mr. RADFORD, in reference to paragraph 8, thought that the Council ought to have taken means to secure the admission of all members of the College to the Register of Teachers. He considered that a teacher who had taught successfully for many years ought to be permitted to prove his efficiency by the results of his teaching, and ought not to be required to submit himself to the judgment of an individual inspector as to his ability to teach. It was not in this way that the Medical Register was formed, and he did not think it right that an entirely different plan should be followed in setting up a Register of Teachers.

Mr. PINCHES observed that the Register had now been in existence for nearly two years, and it was rather late in the day to declaim against the Council for not securing the inclusion of the members of the College *en bloc*. The Council had, in fact, done their utmost to obtain the best possible terms for the members. The House of Commons had approved the conditions embodied in the Order in Council, and it was the duty of the Registration Council to see that these regulations were properly carried out. This they were endeavouring to do to the best of their power, and they had succeeded in getting the Board of Education to make certain modifications in the original Order, one of which had, he thought, been of considerable advantage to their members—that, namely, by which many teachers of long experience, but without the specific qualifications required, had had their names placed on the Register.

Dr. SCOTT wished to bear testimony to the fact that the claims of private-school masters and mistresses had been most carefully considered by the Registration Council. Admission to the Register depended not on membership of any corporation, but on the possession of certain personal qualifications; and when it was found by experience that the regulations bore hardly upon many teachers who were capable and had done good work, they asked the Board of Education to modify those regulations in the sense of giving the Registration Council more discretionary power than they possessed at the outset. Those who had followed the change would see that the new amending minute had enabled the Council to put on the Register all who could prove themselves to be good teachers, even though they might not possess the academic qualifications prescribed in the Order. What was required was ten years' service and proof of ability to teach. If the evidence was not conclusive, then it was open to the applicant to have his teaching capacity certified by an inspector who heard him teach. On behalf of the Registration Council he desired to say that every competent member of the staff of a recognized school ought to be able to find his way on to the Register.

Mr. GUTTERIDGE, in reference to paragraph 9, wished to know whether the Council had considered the desirability of having the College building lit by electric light.

Mr. PINCHES said he had no doubt that they would all like to see the electric light substituted for gas, but the expense would be considerable. The question, however, had not been lost sight of, and the members might be assured that the change would be made as soon as it was deemed practicable.

Mr. RADFORD suggested that a portion of the balance should be added to the Benevolent Fund, and that, instead of the books of questions that were sent out twice a year to the members, every member should be supplied gratuitously with a copy of the College Calendar.

Dr. BELL asked whether it was not a fact that every application for a grant from the Benevolent Fund had been favourably received.

Mr. PINCHES said that was so in nearly every case, and they had at their disposal, in the interest derived from the fund, a larger sum than that required for the amount of the grants that had been applied for during the year.

The Report as a whole, together with the accompanying abstract of accounts, was then adopted.

The meeting then proceeded to the election of twelve members of the Council in place of the twelve retiring by rotation, and three Auditors.

The SECRETARY having read the list of attendances made by the retiring members at Council and Committee meetings,

Mr. MAPLES protested emphatically against the method adopted in submitting to the meeting the list of persons recommended by the Council for re-election, some of whom showed by the small number of their attendances the degree of interest they took in carrying out the duties entrusted to them. He wished to know whether some better method of voting could not be introduced.

Dr. MOODY thought that it would be a great mistake if the value of individual members of the Council were to be estimated merely by the number of their attendances at the meetings. It was quite possible that a particular member might attend but seldom, though he might render great services to the College.

Mr. WILSON did not see how the Council could do more than offer the members the opportunity of erasing any name or names from the list and inserting others in their place. If the Council did not put forward a list, it might happen that the requisite number could not be nominated. By placing the names on the paper the Council merely notified that the time for which the twelve members had been elected had expired, and that they were willing to serve again.

Mr. PINCHES said the action of the Council was conditioned by the Charter and by the by-laws. By Section V. they were bound to prepare a list of not more than twelve members for election; but this was not to preclude any member of the Corporation who might not be a member of the Council from proposing other candidates, and the name of every candidate so nominated, if forwarded to the Secretary thirty days before the meeting, would be circulated together with the list proposed by the Council. Now, what had members outside the Council done to carry out the directions of the by-law? The Council were under obligation to bring forward a list, and they had submitted the names of the retiring members, leaving it to members to nominate others. It was in the power of the General Meeting to make any alteration in the by-laws, provided that the alteration was not contrary to the Charter. The Council were not responsible for the by-laws, which were drawn up by Mr. Chitty, a most eminent counsel who was afterwards appointed a Lord Justice. If the general body thought that the by-laws should be altered, by all means let them be altered; but it was unfair to censure the Council for doing that which by the Charter they were bound to do.

The CHAIRMAN having appointed Mr. King and Mr. Musson to act as scrutators, the voting papers were distributed and the election was proceeded with. On the scrutators subsequently presenting their report, the following were announced by the Chairman to be duly elected:—

MEMBERS OF THE COUNCIL.

Rev. G. C. Bell, M.A., Hillside, Fountain Road, Norwood, S.E.
Rev. A. W. Boulden, M.A., L.C.P., Christ Church Vicarage, Erith.
Miss F. J. Lawford, Camden School for Girls, Prince of Wales Road, N.W.
R. F. Charles, M.A., 12 St. Alban's Villas, Highgate Road, N.W.
Miss M. Crookshank, Ringwood, Chorley Wood Road, Rickmansworth.
Miss E. Day, Grey Coat Hospital, Westminster.
R. Hawe, The High School for Boys, Wellesley Road, Croydon.
Rev. S. F. Hiron, LL.D., D.C.L., Whatlington Rectory, Battle, Sussex.
Miss S. Jebb, 14 Stockleigh Road, St. Leonards-on-Sea.
Barrow Rule, Dera House, Barclay Road, Croydon.

The DEAN then presented his Report, which was as follows:—

THE DEAN'S REPORT.

IN addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Christmas Examination of candidates for Certificates took place on the 8th to the 12th of December at 220 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Aldershot, Anerley, Ashburne, Attleborough, Bamford, Banbury, Bath, Beckington, Bedford, Biggleswade, Birkdale, Birmingham, Blackheath, Blackpool, Bognor, Bolton, Borden, Bournemouth, Braunton, Brentwood, Bridgnorth, Brighton, Bristol, Burnham (Som.), Cardiff, Carlisle, Castle Cary, Cheltenham, Chepstow, Chertsey, Chiswick, Clacton-on-Sea, Clevedon, Coleford, Congleton, Coventry, Cowes, Crewe, Croydon, Deal, Derby, Devizes, Devonport, Doncaster, Dublin, Durham, Ealing, Earl's Colne, Eastbourne, Edinburgh, Eltham, Evesham, Exeter, Fakenham, Farnworth (Bolton), Faversham, Frome, Gosberton, Grantham, Gravesend, Great Ayton, Greenwich, Halesowen, Halifax, Handsworth, Harrogate, Hastings, Hatfield, Hereford, Herne Bay, Holsworthy, Hull, Hulme, Inverurie, Iron-Bridge, Jersey, Kibworth, King's Lynn, Kingston-on-Thames, Kirkby Stephen, Launceston, Leeds, Lincoln, Liskeard, Liverpool, Llandudno, London, Loughton, Lowestoft, Lucton (Hereford), Lytham, Maidenhead, Maidstone, Malmesbury, Manchester, Margate, Market Deeping, Marlborough, Morecambe, New Brighton, New Malden, Newcastle-on-Tyne, Newport (Mon.), Newton Abbot, Northampton, Norwich, Nottingham, Ongar, Penketh, Penmaenmawr, Peterborough, Plymouth, Portsea, Portsmouth, Ramsey (Hunts), Reading, Reigate, Richmond-on-Thames, Ryde, Saffron Walden, Saham, St. Anne's, St. Austell, St. Ives (Cornwall), St. Leonards-on-Sea, Sale, Salford, Sandwich, Scarborough, Seaford, Selby, Sevenoaks, Sheffield, Shirley, Shoreham, Sittingbourne, Southampton, Southend, Southport, Southwold-on-Sea, Stanford-le-Hope, Sudbury (Suffolk), Sunderland, Tamworth, Taunton, Teignmouth, Torquay, Totnes, Towcester, Wallington, Walton (Liverpool), Wanstead, Warminster, Wellington (Salop), West Norwood, Weston-super-Mare, Wigton, Winchcombe, Winchester, Wisbech, Woking, Wokingham, Wolverley, Worksop, Worthing, Yarmouth, and York. The Examination was also held at Batticaloa and Colombo (Ceylon), Stewart Town (Jamaica), Nassau (Bahamas), Georgetown and New Amsterdam (British Guiana), St. George's (Grenada), St. Lucia and St. Vincent (B.W.I.), Port of Spain (Trinidad), Bloemfontein, Johannesburg, Cape Coast, Lagos, Mussooree (India), Cheefoo (North China), and Lomas de Zamora (Argentine Republic).

The total number of candidates examined (not including 361 examined at Colonial and Foreign Centres) was 5,919, of whom 3,831 were boys and 2,088 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined for Certificates during the year (not including those who attended the Supplementary Examinations in March and September) was 10,481.

The following table shows the proportion of the candidates at the recent Examination who passed in the class for which they were entered:—

	Entered.	Passed.	Percentage.
First Class (or Senior) ...	487	261	54
Second Class (or Junior) ...	2,298	1,166	51
Third Class	2,894	2,133	74

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered, nor of those (240 in number) who entered only for certain subjects required for professional preliminary purposes.

The number of candidates entered for the Lower Forms Examination (not including 138 examined at Colonial and Foreign Centres) was 1,940—1,042 boys and 898 girls. Of these 1,675 passed, or 86 per cent.

At the supplementary Examination for First and Second Class Certificates, which was held on the 8th to 10th of September, in London and at the following Provincial Centres, viz., Birmingham, Bristol, Leeds, Liverpool, and Manchester, 203 candidates presented themselves. The number of candidates examined at these supplementary examinations during the year was 497.

The Christmas Examination of Teachers for the College Diplomas took place on the 29th of December and four following days, in London and at the following Local Centres:—Alnwick, Birmingham, Blackburn, Bristol, Croydon, Hayle, Jersey, King's Lynn, Laxfield (Suffolk), Leeds, Manchester, Morwenstow, Newcastle-on-Tyne, Plymouth, Stornoway, Truro, West Hartlepool, Worthing, Buenos Ayres, Durban, Hong Kong, Sierra Leone, and Worcester (Cape Colony). It was attended by 552 candidates, of whom 330 were men and 222 women. On the results of this Examination, 1 candidate obtained the Diploma of Fellow, 27 that of Licentiate, and 163 that of Associate.

The number of schools examined and inspected during the year under the Visiting Examination and Inspection Schemes (A), (B), and (C) was 22.

The College has also conducted certain Examinations for other bodies.

The Report was adopted.

Mr. GUTTERIDGE then moved the following resolution, of which due notice had been given:—

> That it would be in accordance with the well established custom of other corporations and societies, if printed lists of the attendances of members of the Council, both at Council and Committee meetings, were circulated in the Hall for the general convenience of members at the January General Meeting.

He pointed out that the resolution was an amendment of the resolution which he had brought forward at the last General Meeting. It really involved the rights of private members. The reason why more members did not attend the meeting was that they felt they were compelled to take part in proceedings that were already cut and dried. The terms of the resolution were moderate, and in accordance with the well established custom of other bodies, such as the Assistant Masters' Association and the Private Schools' Association.

Mr. RULE said that every member of the College received *The Educational Times*, in which appeared the reports of the proceedings at the meetings of the Council, and the names of those attending each meeting. It was to be observed that some of the members lived in distant parts of the country, and the regularity of their attendance would, no doubt, be affected by the importance of the business that appeared on the agenda. It was more important that there should appear on the executive body the names of men of weight and influence in the country than that there should be a large attendance at every meeting.

Dr. MOODY said that, according to his experience of the practice of a number of corporations and societies with which he was acquainted, it was not in accordance with general custom to publish such a list as that proposed in the resolution.

Mr. THORNTON, on the other hand, instanced the case of University College and the University of London, where such lists were published. The mere fact that a member had only attended once or twice was not in itself a reason why he should not be re-elected; but they did want to have some guidance in what they were doing, and this could, he thought, best be afforded in the way proposed by the mover of the resolution.

On the resolution being put to the meeting it was declared to be lost, 12 voting for and 13 against it.

A vote of thanks to the Chairman concluded the proceedings.

ADJOURNED MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

AN adjourned meeting of the Council was held on January 23. Present: Dr. Wormell, Vice-President, in the Chair: Mr. Baumann, Rev. J. B. Blomfield, Mr. Butler, Mr. Charles, Mr. Eve, Mr. Hawe, Mr. Holland, Mr. Pinches, and Rev. J. Twentyman.

Diplomas were awarded to the successful candidates at the Christmas Examination of Teachers. The Licentiateship Diploma was also granted to Miss H. M. Barnes and Rev. A. L. Fillingham, who had completed their examinations.

[*A list of the successful candidates at the Christmas Examination is given on page* 77.]

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—ED. *E.T.*]

"ESPERANTO."

To the Editor of "The Educational Times."

SIR,—We have in Europe now about twelve living languages, but apparently that is not enough: Miss Lawrence wants us to

Digitized by Google

learn another, "Esperanto," which she says possesses many advantages—*inter alia*, that of being composed of words mainly of Latin parentage. Well and good; but, considering that Latin is studied neither by women (except a few) nor by the industrial or commercial classes, and well nigh forgotten by those who learnt it, I fail to see the good of learning this "international" language.

Not long ago the *Times* contained a letter from the late Sir F. Bramwell, advocating the selection of Italian as a common language on the ground that it was derived from Latin. How it was to be learned in this country he did not and could not say, because he felt that thousands of Italians of both sexes would be required to come over—a preposterous expectation. Now, Miss Lawrence solves the problem in a much easier way. She would simply provide every centre of education with phonographs, thanks to which all peoples of both hemispheres would acquire at will the true accent, the correct pronunciation, of the Esperanto vocabulary.

Granted that the uniform termination of *o* for nouns, of *a* for adjectives, of *e* for adverbs reduces to a minimum the scale of sounds. But it strikes me that Esperanto must make a very monotonous, not to say anti-musical, speech.

By the way, if phonographs have such powers, why should they not be good and equally useful for the practical learning of English, French, German, &c.? It would not only be a great saving; it would also spare our respective countries the troublesome presence of foreigners, not always welcome.

According to your correspondent, Esperanto is already taught "in *lycée* after *lycée*." Of course, the brassy instrument is always at hand, invariably in good temper, with its metallic voice. May I ask the lady to give us the names of the said *lycées* where already it takes the place of German and English instructors?

The question, says Miss Lawrence, should not be left to the decision of academical bodies. Why not? Are they too competent? Who, then, will decide the point scientifically or with some show of authority?

To sum up, I beg to enter my humble protest against all attempts to force upon us Volapüks, Esperantos, or any other *lingua ejusdem farinæ*. Since Leibniz, who was, I think, the first to imagine such a novelty, two hundred years ago, many have been the trials, and none, fortunately, has yet succeeded—and why? *Because a universal language supposes a unique system of social intercourse, and only one sort of intellect throughout the world.*

Had any common language been used all over Europe, as the worshippers of unity would have it, we should have been deprived of our best specimens of literature, of books that make our delight, educating the young, elevating the adults, solacing the old—in fact, constituting the principal elements of progress and civilization.—I am, Sir, &c., ALF. HAMONET.

December 7, 1903.

[Miss Lawrence wrote simply: "The much despised phonograph would be a useful feature, if needed [for the regulation of pronunciation]. So far, the difficulty as regards pronunciation has not arisen." The idea was mooted long before Leibniz (see "La Langue Universelle," by Drs. Couturat and Leau).—ED. *E.T.*]

To the Editor of "The Educational Times."

SIR,—Allow me to add my thanks to those of my colleague Mr. J. C. O'Connor for inserting Miss Lawrence's letter. It seems astonishing to me why all teachers in Great Britain do not at once become adherents and apostles of this marvellous vehicle of intercourse between persons of every profession and calling in all nations.

I speak from personal experience and in all seriousness when I state that (instead of months and years of weary study) that simple, logical, and euphonious idiom "Esperanto" can be acquired by any one giving a few weeks' attention to it—and, once understood, it lasts a lifetime.—I am, Sir, &c., ACH. MOTTEAU.

157 Earlham Grove, Forest Gate, *January* 13, 1904.

P.S.—The classes promoted by the Forest Gate Esperanto group are free to all. Teachers are specially welcome. A class is now held every Tuesday night, 8 to 9 p.m., at 69 Woodgrange Road, Forest Gate.

TEACHERS' DIPLOMA EXAMINATION.

CHRISTMAS, 1903.

THE following are the names of the candidates who passed in the various subjects: (*hon.*) attached to a name, or to a letter denoting a subject, indicates that the candidate obtained Honours in the subject:—

HERBERT SPENCER AS PURE PHILOSOPHER.

THE *British Friend*, in a generous and able article on Herbert Spencer (January) writes :

The truth is that, with all his unique power of abstract thought, Herbert Spencer was not, in the strict sense of the word, a philosopher at all. His thought hovers on the borderland of philosophy, where science is passing over into metaphysics; but the real metaphysical standpoint he never consistently maintains. That is to say, apart from certain portions of his "First Principles" and of his "Psychology," in which he is compelled for the time to philosophize, and which are the least satisfactory parts of his work, he remains throughout *an observer of phenomena*, for whom the facts of the universe are simply given, as if they had an independent existence. He does not penetrate to what lies below phenomena, or give any satisfactory answer to the fundamental question, What constitutes Reality? He never fully grasped the significance of Descartes's "Cogito; ergo sum," or Kant's critique of knowledge. He never really faced the question, How is knowledge possible, and what are its necessary conditions? He never clearly heard the answer of modern philosophy, that knowledge of a real world is only possible on the presupposition of a mind which is universal and persistent, a consciousness of which the finite consciousness is but (as it were) an off-shoot, like a spark from a fire.

The significance of personality, its conditions and implications, which is one of the deepest problems of philosophy and religion, had for Herbert Spencer little interest. He tried, and wholly failed, to construct a person out of a primordial cell. He begins his psychology without regard to consciousness; but, before he has ended, consciousness is there, and no one knows how it got there. The problem of free will, or self-determination, he rather shirks than faces. His attempt to deduce the moral law from the facts of biology was necessarily foredoomed to failure; for, as Mazzini was never tired of urging, we cannot learn what *ought* to be by reflecting on what *is*. The two problems are in different categories of thought.

A reserved, but acute and delicately suggestive, criticism may be read in the late Prof. Bain's "The Emotions and the Will," towards the end of the volume.

ON SQUARE ROOT APPROXIMATIONS.

By H. B. WOODALL, St. Asaph County School.

MR. R. F. DAVIS'S note in the November number (page 461) recalls an observation I made some time ago on a very simple method of obtaining the square roots of the first 16 integers which is accurate enough for most of the purposes of practical mathematics. For the square roots of 2 and the integers between 9 and 16 the rule may be stated thus: (1) Write the fraction whose denominator is 5 and whose numerator is $5+N$; (2) write down N times the reciprocal of this fraction; (3) convert to decimals and take the mean of the two results. This gives $\sqrt{N}$ with an error of about 0·1 per cent. when $N=10$, and much less for the other values, being only about 0·005 per cent. when $N=2$, and about 0·0001 per cent. when $N=13$. For the square roots of 3 to 8, inclusive, read 4 instead of 5 in the above rule. The following table gives some of the results of both formulæ :—

N	$\sqrt{N}$	$\frac{1}{2}\left\{\frac{N+4}{4}+\frac{4N}{N+4}\right\}$	$\frac{1}{2}\left\{\frac{N+5}{5}+\frac{5N}{N+5}\right\}$
2	1·414,213	1·416,666	1·414,285
3	1·732,051	1·732,143	1·737,500
4	2·000,000	2·000,000	2·011,111
5	2·236,068	2·236,111	2·250,000
6	2·449,490	2·450,000	2·463,636
7	2·645,751	2·647,727	2·658,333
8	2·828,427	2·833,333	2·838,461
9	3·000,000	3·009,615	3·007,142
10	3·162,278	3·178,571	3·166,666
11	3·316,624		3·318,750
12	3·464,101		3·464,705
13	3·605,551		3·605,555
14	3·741,656		3·742,105
15	3·872,983		3·875,000
16	4·000,000		4·004,761

The error of both formulæ is always in excess. The curve of error of $\frac{1}{2}\{(N+5)\sqrt{5}+N\sqrt{(N+5)}\}$ is interesting. It has a maximum turning point at about $N=6$; that is, about the middle of the range throughout which the other formula gives the better approximations. It also has a minimum turning point close to $N=13$. The method was suggested by considering that 2 lies between $\frac{4}{2\cdot5}$ and $\frac{100}{49}$, and that 3 lies between $\frac{4}{1\cdot6}$ and $\frac{144}{64}$, the first formula to be tried being $\frac{1}{2}\{7\ (7-N)+N\sqrt{(7-N)7}\}$, of which the formulæ given above are alternatives when $N=2$ and $N=3$. The curve of error leads to the additional observation that 13 lies between $\frac{3\cdot2\cdot4}{2\cdot5}$ and $\frac{4\cdot2\cdot5}{3\cdot2\cdot4}$, and very near to their mean.

REVIEWS.

THE ILLUSTRATED ENGLISH LITERATURE.

English Literature. An Illustrated Record, in Four Volumes. By Richard Garnett, C.B., LL.D., and Edmund Gosse, M.A., LL.D. Vols. II. and IV. (16s. net each. Heinemann.)

The present volumes complete the work. The second volume covers the period from the age of Henry VIII. to the age of Milton, Dr. Garnett contributing the larger and weightier portion down to the end of the chapters on Shakespeare, and Dr. Gosse dealing with the Jacobean writers of poetry, drama, and prose—a period of two generations, or scarcely one-tenth of the time covered by the first volume. The difference of character and circumstances explains the difference of treatment; "the ample space devoted to those who have made the British literature of the age European—especially its two pre-eminent representatives, Bacon and Shakespeare," is abundantly justified. The fourth volume is disposed in four chapters—"The Age of Wordsworth," "The Age of Byron," "The Early Victorian Age," and "The Age of Tennyson"—the limit being the death of Queen

Digitized by Google

Victoria; and "it deals with no living person except with one famous and venerable philosopher, whose work, we must regretfully suppose, is finished"—an exception that no longer holds good. Both volumes are illustrated with the same profusion of portraits (many of them full-page and finely reproduced), scenes, examples of handwriting, of old title-pages, of ancient buildings, and so forth, all of which contribute effectively to realization of the personality of the various authors and the conditions of their literary activity.

Dr. Garnett has been well advised to treat the Elizabethans, and especially the more immediate predecessors of Shakespeare, at considerable length; and this he has done with fullness of knowledge, breadth and maturity of judgment, and freshness of literary expression. He thinks that Bacon must be "acquitted of deliberate wrongdoing," but "censured or compassionated for a deplorable lack of moral sensitiveness," and that his style is at its best in "the noble and flowing periods of 'The Advancement of Learning.'" He has a very decided opinion on the Bacon-Shakespeare question. Having quoted a passage on Perkin Warbeck from "The History of Henry VII.," he says:

> Shakespeare has depicted a similar situation to Perkin's in his "Richard II."; and the contrast between his profuseness and Bacon's sobriety—as marked as that between "The New Atlantis" and "The Tempest"—should alone suffice to decide the so-called Baconian controversy.

In view of "the prevalence of this remarkable delusion," Dr. Garnett considers "Bacon's technical claim to the character of poet," and ridicules it. Returning to the subject in his treatment of Shakespeare, he writes:

> The existence of a long unknown interval in Shakespeare's life during which he may have been subjected to influences making for high culture disposes of the only plausible argument adduced by the advocates of the Baconian authorship of his plays and poems. Even were the case otherwise, it ought to be evident that, whoever the author might have been, it could not be Bacon. To suppose Shakespeare's dramas, Bacon's philosophy, and Bacon's politics to be the simultaneous operation of a single brain is to credit the human mind with higher powers than it possesses. . . . It is, moreover, the case that no great lawyer has ever been a great poet.

Passing over the more common arguments, Dr. Garnett adduces one that he does not remember to have seen brought forward—"the impossibility of the Baconian secret being kept." He says:

> Baconians talk as if Bacon had nothing to do but to write his play at his chambers and send it to his factotum, Shakespeare, at the other end of the town; but nothing can be clearer than that points must have been continually arising requiring consultation with the author, that this author must have lived in a dramatic atmosphere and been in constant communication with the theatre. That this was really the case is proved by the directions to the players in "Hamlet." No one, surely, can doubt that the writer of this scene had been in the constant habit of giving instructions to performers. If he were Shakespeare, no question arises; but if he were Bacon? Did he go down to the theatre for the purpose, taking boat or riding over Old London Bridge; or did he drill the players at his chambers? In either case the actors would speedily discover that they were being tutored by the author in person, and the secret would soon be all over the town. There is no escape from this, unless by maintaining that, whereas all Hamlet's other speeches are by Bacon, this one is by Shakespeare. Unfortunately, it contains five sentences that have become household words wherever English is spoken.

The treatment of the whole of Shakespeare's career and works is conspicuously able and careful. As to the "Sonnets," Dr. Garnett concludes, after an elaborate argument, that, while they "were certainly addressed for the most part either to Southampton or to Pembroke—and Southampton is not entirely out of the question—the evidence derived from dates and the general character of the poems greatly preponderates in Pembroke's favour." As to Hamlet's madness, he "feels no doubt that it is real, though never amounting to lunacy, and that the actual taint of insanity in his mind makes the simulation of it much the easier to him"; and here at last we have the luxury of disagreeing with him. But his appreciation of Shakespeare is finely enthusiastic. Consider "with what remoteness from all possible competition he stands forth as Britain's national poet. To remove any other great poet from our literature would be to lop off a limb from a many-branching tree; to remove Shakespeare would be to take the sun out of heaven."

Again Dr. Gosse has been condemned to struggle for space and to select critically from the multitude of aspirants to immortality. Yet again he might have saved a good deal of space by pruning his composition. In point of knowledge and maturity of judgment he has to bear a severe comparison by the side of his colleague. His range is much more limited: indeed, beyond the bounds of pure literature he never seems to be quite comfortable. Thus, he says of Bentham that "he invented, or first made general, the formula of 'the greatest happiness of the greatest number.'" In dealing with Burke's crusade against Warren Hastings, his attitude to Hastings is nearer to that of Macaulay than to that of modern students who know the facts better and appreciate them more justly. He is evidently without the experience necessary to pronounce upon the relations of the Carlyles. And even on the purely literary ground we should dispute many of his judgments: perhaps none is more regrettable than the violence of his depreciation of George Eliot. With all this, however, Dr. Gosse's survey furnishes a fluent and comprehensive sketch of the literary forces of the time.

In his "Epilogue" Dr. Gosse enters into a brief discussion of principles of criticism. Naturally enough, he deprecates "an arrogant dogmatism" as "nowhere more thoroughly out of place than in a critical history of style"; and, in search for a "criterium [*sic*] of literary production" (IV. 369), he asks: "What if a scientific theory be suggested which shall enable us at once to take an intelligent pleasure in Pope and in Wordsworth, in Spenser and in Swift?" But surely an intelligent pleasure in these writers' works does not await the discovery of a theory. There must be many minds broad enough to appreciate all the four. However, Dr. Gosse reminds us that "Mr. Herbert Spencer has, with infinite courage, opened the entire world of phenomena to the principles of evolution"; but he thinks "we seem slow to admit them into the little province of æsthetics." He proceeds:

> It is surely time that we should recognize only two criteria of literary judgment. The first is primitive, and merely clears the ground of rubbish. It is: Does the work before us, or the author, perform what he sets out to perform with a distinguished skill in the direction in which his powers are exercised? If not, he interests the higher criticism not at all; but, if yes, then follows the second test: Where, in the vast and ever-shifting scheme of literary evolution, does he take his place, and in what relation does he stand, not to those who are least like him, but to those who are of his own kith and kin?

So far good: but there is a third question of no little importance which Dr. Gosse no doubt implies, but which seems to us worth equal prominence with the other two, and that is the competence of the critic in knowledge, experience, impartiality, and sympathetic faculty to sit as judge upon the questions propounded. Meantime we have to thank both authors and publisher for a magnificent work.

A Tale of the Ptolemies.

Tychiades. By Alfred Dickeson. (6s. Fisher Unwin.)

The tale purports to have been "written in the third century B.C. by Ornithovius," and to be "now faithfully translated out of the original" by Mr. Dickeson, who explains elaborately in his preface how "the book has been preserved in his family, unmutilated, down to the present day," as well as the historical conditions of the period and the place in which the events occurred. The story opens in 280 B.C., when Ptolemy the Second (Philadelphus) of Egypt was twenty-nine and Alexandria was already a populous and opulent city. Tychiades, a youthful philosopher seeking to satisfy his thirst for divine knowledge at the sacred wells of Heliopolis, is the connecting link of the multifarious personages and episodes, but he can scarcely be called the hero. Apart from the private story, which contains pathetic personal elements as well as causes that deflect Tychiades from his original pursuit, the interest lies in the depiction of the great public events of the period, with the social conditions amidst which the important personages played their several parts. The central episode is the restoration of the worship of Sarapis and the dedication of the temple in his honour at Rhacotis—a large and complicated reconstruction vividly represented. The Museum at an early stage brings us into contact with Zenodotus, the royal librarian and editor of Homer, and with Philetas, the court poet, and eventually enables us to assist at the foundation of the Ptolemaic School of Philosophy (the seat to be "permanently fixed in the building of the Sarapeum"), and at the origin of a rather disastrous expedition fitted out to "search the land and appropriate, or, when not practicable so to do, examine and exhaustively study on the spot the natural phenomena that abound in this wonderful land of Egypt." At Sebennytus we meet the sage Manetho, the great historian of the Egyptians; and at Heliopolis we witness an extraordinary contest between rival magicians—Titmothis, the son of Manetho, and Anebo, in

Digitized by Google

whose hands Sarapis had placed "the sacred books of Hermes Trismegistus," whereby "he was enabled, through the Mirror of Life, to learn everything that has happened in the past and to discover with amazing accuracy those things which shall happen in the future"—and the no less extraordinary attempt of Titmothis to establish his pretension to the presidency of the College of Hermes as High Priest of the sacred city. Incidentally, too, we have the story of King Psam-tik's dream of the Palace of Truth—"a fair virgin arrayed in fine gold" built into a middle chamber "with treasure and great riches," and more than a thousand other rooms around, "in the centre of each brick a heart-shaped piece of the purest gold," and "every brick fashioned to fit exactly into its own place"—with the interpretation thereof by "the wisest men and soothsayers of the kingdom" at Sais. Of the particular personalities the most outstanding is, perhaps, Gigas, the royal curator of the Alexandrian Zoo, who was elected a Fellow of the Museum on the strength of his geographical acquirements. A catalogue of main points, however, but indicates the bones that Mr. Dickeson has clothed with attractive tissue, animated by a vivid imagination. The work is an able reconstruction of a very interesting and important period. In a second edition many grievous weaknesses of English composition should be carefully removed.

Hammurabi and Moses.

The Laws of Moses and the Code of Hammurabi. By Stanley A. Cook, M.A. (6s. net. Black.)

Last September we noticed Mr. Johns's translation of the recently discovered Babylonian Code, and now we have a discussion of the Pentateuchal legislation in comparison with that important document. In preliminary chapters Mr. Cook gives an account of the discovery of the Code, summarizes its contents, and deals with the question of the foreign origin of Hammurabi's dynasty. The theory of Arabian origin he admits "to be extremely plausible," but hesitates to accept:

> If Arabia is the cradle of the Semites, and has best preserved the characteristics of the Semitic race, even as the language approximates most nearly to the primitive Semitic tongue, the hypothesis in question is no doubt *a priori* justifiable. At the same time, nevertheless, one must not too hastily accept the theory that Arabia at this remote period was already in possession of a civilization of a highly developed character that was able to leave its stamp upon either the dynasty of Hammurabi or the earliest Israelites.

Mr. Cook institutes his comparative inquiry first on the elements of law and procedure, and finds a "sufficiently striking" contrast "between the methods that prevailed in Egypt and Babylonia and the simple, primitive 'courts' of the early Arabians and Israelites"—a conclusion of marked importance. He gives no fewer than three of his most elaborate chapters to the Family—a very instructive investigation, though we see no adequate support for his repeated affirmation that the general principles of the Babylonian family system are distinctly (page 152) and strongly (page 128) reminiscent of ancient Rome; indeed, we are told (page 93) that "there are no traces of the *patria potestas* among the ancient Semites," and that the "independence of the Babylonian woman in business affairs may be ascribed partly to a theory which fundamentally distinguishes Semitic legal usage from—for example—the Roman." Next Mr. Cook treats of slaves and labourers, land and agriculture (with some perilous references to original community of property in land), trade and commerce (with general rights to security of individual property), and the protection of the person. The division of the materials is popular and convenient rather than technical; but that is no real drawback. Mr. Cook's conclusions, as well as his arguments, are wisely cautious. Thus:

> It is not until the Exile that we find Assyrian words in the terminology of trade, and it is in the literature of this period that features relating to cult and ritual begin to betray a significant resemblance to Babylonian usage. Descending still further, the minute precision of Talmudical legislation shows intimate signs of an acquaintance with Babylonian law, and the Babylonian origin of the legal phraseology becomes most marked.

The question of the general extent of Babylonian influence over Canaan is also judiciously considered. As already suggested, there are signs of haste here and there, and one could have wished stronger indications of special training in legal and sociological inquiry. The work, however, is laborious and learned, and valuable as a step towards the fuller consideration of the important and complicated questions suggested by the Code. We heartily commend it to general readers as well as to experts.

The Theory of Invariants.

The Algebra of Invariants. By J. H. Grace, M.A., and A. Young, M.A. (10s. net. Cambridge University Press.)

The work fills a large gap which has, of late years, been felt to exist in the ranks of English treatises on mathematics. It was, in fact, the definite expression of the existing need which led the authors to undertake their task. Their object is to give to English students an account, in their native tongue, of the "symbolical method" applied by German mathematicians to the theory of invariants. Of this method one notable advantage is that its use enables the mathematician to throw into more compact form the rather cumbrous expressions to which the subject gives rise. The treatise is not presented to readers as an exhaustive one: it concerns itself only with the full and careful analysis of the principles of one portion of a wide subject. The methods discussed apply with most force to invariants and covariants of *binary* forms: hence the greater portion of the volume considers such methods in connexion with binary quantics, though it should be mentioned that some of the later chapters are devoted to the question of *ternary* forms and to certain general theorems. Ternary forms, however, are viewed geometrically rather than analytically. After giving some illustrations and preliminary definitions, the text proceeds to a simple and admirable development of the principles and uses of the symbolic notation, and gradually leads up to the subject of the sixth chapter—namely, the demonstration of Gordan's great theorem that there exists for any given binary form a complete and finite system of covariants. The student is prepared for the enunciation of Gordan's theorem by the discussion introduced in earlier pages, where it is shown that the proposition certainly holds for special orders of binary quantics. The authors direct the attention of the reader to important differences between their manner of treating the particular cases and the process employed by Gordan to prove the general theorem. Afterwards, the ninth chapter gives the line of argument adopted by Hilbert in his proof of the same theorem. Although the writers reproduce the essentials of the original work of earlier exponents of the theory of invariants and covariants, yet they do not consider themselves obliged to retain details of method or form, and, accordingly, these are freely varied when variation appears desirable. The chapter on types of covariants contains results which are both important and really new. A great deal of attention is given in the later portion of the work to apolarity and rational curves. A welcome characteristic of the new volume is the freedom of the language from mere difficulties of style.

The New "Aristophanes."

The Thesmophoriazusæ of Aristophanes. By Benjamin Bickley Rogers, M.A. (7s. 6d. George Bell.)

Mr. Rogers now follows up the volume containing the "Frogs" and the "Ecclesiazusæ" with a half volume, which will form the second part of Volume IV. in the complete series. It seems a pity that the uniformity of the series should be broken by placing the translation at the end, and not, as before, opposite to the Greek. Perhaps the reason is that it is a "free translation"—exceedingly free, for the translator acknowledges that "the greater part" of it "was composed from memory" when he "had no copy of Aristophanes at hand." "Consequently," he adds, with fine audacity, "it everywhere departs from the sense of the original: words, sentences, and even whole speeches have been omitted, transposed, or added; . . . and sometimes the English goes clean contrary to the meaning of the Greek." Moreover, "it was completed from a copy of Bekker's Aristophanes, the text and arrangement of which differ widely from the text and arrangement of the present edition." One hardly knows how to take an author with a profession such as this: probably the meaning of it is that he is reluctant to undertake the labour of reducing the play to the uniformity of the series; and in any case we cannot but regard it as a great mistake. At the same time we must admit the author's anticipation that "even from this inaccurate version, a reader, taking the play as a whole, may obtain an idea, not altogether inaccurate, of the 'Thesmophoriazusæ' of Aristophanes." As a *tour de force* of the nature described, the rendering is certainly a very remarkable achievement, indicating that the author had the play well in his mind,

Digitized by Google

while he was released from absolute subservience to the text. Yet this only increases the misfortune that the whole rendering was not adapted to the text for the final edition. The appendix of various readings is very full, the text being very corrupt. The introduction and the notes show a prolonged and congenial study of the subject and of the text, and will be very useful and suggestive to all readers.

GENERAL NOTICES.

CLASSICS.

Sources for Roman History, B.C. 133-70. Collected and arranged by A. H. J. Greenidge, M.A., and A. M. Clay. (Clarendon Press.)

The materials are arranged chronologically in two divisions—internal and external history, the former being as complete as possible, the latter not detailed (references being sufficient for details of campaigns and battles). On the whole this principle seems decidedly more effective in "presenting that combination of forces which makes the history of a period by making that of each of its single years"; and it avoids a multiplicity of cross-references. In many cases supplementary as well as alternative information has been very usefully presented in connexion with single events, and, fortunately, conflicting evidence is fully recognized. An appendix deals specially with a number of disputed points. The volume bears the marks of much care and labour, and it will be found exceedingly convenient and helpful. It is to be hoped that the authors will extend a like treatment to other periods of Roman history, and thereby foster a fuller and first-hand study of important events and movements. The book is admirably printed and got up.

A Manual of Greek Antiquities. By Prof. Richard Maisch. Translated by L. D. Barnett, Ph.D. (1s. Dent. "The Temple Primers.")

Prof. Maisch is restricted by the nature of the sources, as well as by the space at his disposal, from presenting a complete picture of "the public and private life of the ancient Greeks as it was generally determined by the peculiar character of the land and its people, in its historical growth, and in its local varieties among the several States of Greece." But he sketches the land and the people of Hellas and the institutions of Sparta and of Athens, naturally giving much the larger space to Athens, and limiting his attention to the fifth and fourth centuries before Christ. The work is small, but there is an astonishing quantity of the most pertinent information packed into it by judicious selection and lucid arrangement and statement. There are seven excellent illustrations. Mr. Barnett has done his part ably, and the publishers have embodied the work in a compact and attractive form—a very welcome addition to a series alike delightful and instructive.

MATHEMATICS.

Practical Plane and Solid Geometry for Elementary Students. By Joseph Harrison, M.I.M.E., Assoc.M.Inst.C.E. (2s. 6d. Macmillan.)

A new and revised edition of a work already known to students. The revision brings it into line with the fresh syllabus issued by the South Kensington authorities. The course is mainly practical and experimental; and, besides giving a training in practical geometry, it is capable of affording an intelligent preliminary insight into various branches of mathematical knowledge which should be more or less associated with the study of geometry. A student working through the course under conditions conducive to a thorough assimilation of its teachings must find himself at the end possessed of a considerable amount of varied and valuable working knowledge. The book is not entirely free from errors of some importance.

Essentials of Algebra. By Webster Wells, B.Sc. (4s. 6d. Heath.)

An interesting and well written text-book, giving clear and careful instruction in elementary algebra. The author, moreover, makes it his aim to keep pace with the best modern methods and ideas. Although in special instances the definitions are not quite satisfactory, still, as a general rule, he is justified in stating that accuracy in the formulation of definitions and of rules is a characteristic of his book. The processes are for the most part the ordinary ones; but all works are, perhaps, not as happy in the manner selected for placing the theory before the student. The treatment of factors is good, and the methods adopted in establishing very many algebraic rules—for example, those of fractions—are such as will be readily understood by the reader, and accepted without hesitation. The principles underlying the solution of problems are well explained; but the statement that the symbol of an unknown quantity can only be an abstract number is a little misleading. A brief, but suggestive, appendix on graphs is from the pen of Prof. Aley, of the Indiana University.

Technical Arithmetic and Geometry. By C. T. Millis, M.I.Mech.E. (3s. 6d. Methuen.)

There should be little or no doubt that the book will fulfil its purpose, seeing that the author has had during many years both practical and theoretical experience of the special needs of the students it is designed for—namely, those that are training as artisans in our polytechnics and technical institutes. The text, indeed, closely follows the course of instruction repeatedly given by him to such students—a course that has, therefore, had every opportunity of being submitted to competent tests. By a careful study of the new work, the reader must acquire considerable knowledge of elementary arithmetic, geometry, and mensuration, as required in the workshop, and will be placed in a position to derive full benefit in the shortest possible time from the more technical portion of his training.

Exercises in Arithmetic, Part I. By C. M. Taylor. (1s. 6d. Edward Arnold.)

Many teachers may be glad to avail themselves of ready-made arithmetical exercises which have been found of value in the classes of a high school. This small volume, constituting Part I. of such a collection, deals with the first four rules of arithmetic applied both to abstract numbers and to money. The exercises are intended some for oral and some for written work; and the answers to those of the latter type are given, and appear to be reliable.

PHYSICS.

An Elementary Treatise on the Mechanics of Machinery, with special reference to the Mechanics of the Steam-Engine. By Joseph N. Le Conte. (10s. 6d. net. Macmillan.)

Mr. Le Conte crystallizes in this volume the substance of his teaching for several years as "Instructor" in the Department of Mechanical Engineering of the University of California. Part I. is introductory, dealing briefly with definitions and principles. Part II. handles in six chapters the "Machinery of Transmission" in various forms and by various methods, dynamic problems being tackled incidentally in the course of the kinematic treatment. Part III. is devoted to the mechanics of the steam-engine, as, perhaps, the most important of machines from the point of view of a designer; and here kinematics and dynamics are treated in distinct sections. There are 212 figures in the text, 15 plates appended, and several other full-page illustrations of complicated arrangements. The work shows distinctive ability as well as full command of the principles and the literature of the subject.

Treatise on Thermodynamics. By Dr. Max Planck, Professor of Theoretical Physics in the University of Berlin. Translated by Alexander Ogg, M.A., B.Sc., Ph.D. (7s. 6d. net. Longmans.)

Prof. Planck avoids the methods associated with the great names of Joule and Helmholtz, and starts directly from the two fundamental principles of thermodynamics. These he expounds concisely and clearly, and then proceeds to apply the theorems he deduces to states of equilibrium of various systems. He considers that this more inductive treatment corresponds best to the present state of the science, at the same time recognizing that it "may have in time to yield to a mechanical, or perhaps an electromagnetic, theory." The work is most able, and it is capably presented in English. Dr. Ogg appends a list of Prof. Planck's publications on the subject, 1879-96, which will prove useful for reference.

Electricity and Magnetism, Theoretical and Practical. By C. E. Ashford, M.A., Head Master of the Osborne Royal Naval College. (3s. 6d. E. Arnold.)

Mr. Ashford proposes to lead the beginner gradually up to the standard of University scholarships, without attempting "to write up to (or down to) any syllabus." The book is primarily intended for use by the student in the laboratory, though certain more complicated parts are dealt with as lecture notes. Magnetism is reduced to little more than a preliminary to Voltaic Electricity; and the elementary Theory of Electrostatics is given with unusual fullness. The treatment is lucid, practical, and independent. There are 209 figures.

MODERN LANGUAGES.

Histoire de la Langue universelle. Par L. Couturat, D.Litt., et L. Leau, D.Sc. (Hachette.)

If "la nécessité d'une langue internationale auxiliaire n'est plus contestée par personne," it is, at all events, not easy to satisfy. The authors, who are respectively treasurer and general secretary of the "Délégation pour l'adoption" of such a language, set forth the practical steps that have been taken till now, and give an account of (1) *Systèmes a priori* (pages 11-120), from Descartes to Dietrich (17); (2) *Systèmes mixtes* (pages 121-237), from J. von Grimm to Bollack (12); and (3) *Systèmes a posteriori* (pages 239-514), from Faiguet to the "Idiom neutral" of the Akademi internasional de lingu universal in 1902 (26)—65 *systèmes* (or suggestions for systems) in all—with a summary criticism at the end of each group. A chapter of obituary is devoted to "les langues mortes"—two systems that died in early childhood. In conclusion, the authors inquire: "Que reste-t-il de tant d'efforts faits pour doter l'humanité d'une langue internationale?" We observe that "Esperanto" occupies pages 304-363, and that it receives a rather good testimonial:—"Ainsi ce n'est pas une langue artificielle, figée et morte, simple décalque de nos langues; c'est une langue capable de vivre, de se développer, et de dépasser en richesse, en souplesse et en variété les langues naturelles. Enfin c'est une langue susceptible d'élégance et de

Digitized by Google

style, s'il est vrai que la véritable élégance consiste dans la simplicité et la clarté, et que le style n'est que l'ordre qu'on met dans l'expression de la pensée." Since the appearance of "Esperanto" in 1887 there have arisen no fewer than nineteen other systems here expounded, to say nothing of three more that have come up while the volume was in the press. The work is certainly curious and interesting, and it speaks much for the industry of the authors and for their devotion to the project.

Phrases and Dialogues with Translations in Cape Dutch. By J. F. van Oordt, B.A. (Williams & Norgate.)

The phrases and dialogues are of the usual character, including the expressions most likely to be needed by an English sojourner among the Boers. They are preceded by a roughly approximate account of the pronunciation and a broad outline of the grammar. The little book will, no doubt, prove useful in practice.

Orell Füssli's Bildersaal für den Sprachunterricht. Kommentar zum 8. Heft. Von Egli und Rossé. (Hachette.)

A companion volume to the series of school picture books in aid of modern language teaching described in our December number. It contains a collection of questions, for the use of teachers, on the pictures contained in the Eighth (for this purpose identical with the Ninth) Part. At the end of the pictures faced by the questions comes a set of reading exercises, which serve for dictation; each is in three parts, graduated for different classes. These books will be found a boon to the teacher scarcely less than to the pupil.

Travellers' Colloquial Spanish. By Howard Swan. (1s. 6d. Nutt. "Phonetic Series," No. 4.)

Mr. Swan arranges a series of idiomatic Spanish phrases to serve travellers in the ordinary situations, placing on the opposite page the pronunciation and the literal meaning of the words. The phonetic representation is simple, though at first blush it looks clumsy, and might have been spared if people would only take the trouble to read his preliminary explanations. It is a handy little volume, and will be very serviceable for its purpose.

ENGLISH LITERATURE.

The Age of Shakespeare, 1579–1631. By Thomas Seccombe and J. W. Allen. Vol. I., Poetry and Prose; Vol. II, Drama. (3s. 6d. each. George Bell. "Handbooks of English Literature.")

Prof. Hales, the general editor of the series, prefixes to the first volume a well considered and effective "general sketch of the conditions under which the great Elizabethan age of literature" arose, the limit of his aim being "to specify the paramount agencies that made the Elizabethan epoch what it was, and so in some degree to illustrate its absolute uniqueness in the history of English Literature." The naïve statement of the complicated process of collaboration of the authors may be taken simply as an indication of the pains bestowed upon the work. The review of Elizabethan writers is orderly, careful, and lucid, with instructive details embodying the results of modern inquiry, and implying in the student a purpose of serious study, while the independent criticism is fresh and sober. The chronological table at the end of the first volume is full enough for considerably advanced work. The text is fluent and pleasant reading, and the books will be most serviceable whether for direct study or for collateral assistance.

The Little Quarto Shakespeare. Edited by W. J. Craig. (1s. a volume. Methuen.)

The first seven volumes of this miniature addition to the varied library of Shakespearean literature justify the highest expectations raised by the names of the editor and of the publishers. The text is carefully edited, and the introductions and notes are brief, pointed, and judiciously selective. The clear type is delightful to read, and the get-up (in blue morocco) is a pleasure to handle. The popularity of the series is assured; it could not well be better deserved.

The Prose Works of Jonathan Swift, D.D. Edited by Temple Scott. Vol. VI.: The Drapier's Letters. (3s. 6d. George Bell.)

A very careful text of the famous and characteristic Letters, with occasional notes always instructive. This will no doubt establish itself as the standard edition of Swift.

Thomas Shadwell. Edited by George Saintsbury, M.A., LL.D., Professor of English Literature in the University of Edinburgh. (2s. 6d. net. Fisher Unwin. "The Mermaid Series.")

Though Shadwell is commemorated in Westminster Abbey — the monument is excellently reproduced as frontispiece—he was all but blotted out of literary recognition by the ruthless onslaughts of Dryden. The penalty "has been, perhaps, heavy beyond justice." Prof. Saintsbury is but a half-hearted apologist: Shadwell's work, he acknowledges, "is a congeries of the worst faults of the time, redeemed only by merits which are sadly tarnished and mouldered by the effect of the faults themselves." He presents a selection of four plays, not one of which he "can venture to say is good as a whole." Yet Shadwell was a famous man in his own day, and "in the two great dramatic qualities of observation of manners and command of technique of a certain type he stands not only not low, but rather high, among English dramatists." We are glad to have these specimens, and we think Prof. Saintsbury might have been a little more courageous. The get-up is agreeably artistic.

RELIGION AND MORALS.

The First Epistle to the Corinthians. By H. L. Goudge, M.A., Principal of Wells Theological College. (6s. Methuen.)

A volume of the "Westminster Commentaries," whose general editor is Dr. Walter Lock, the Ireland Professor of the Exegesis of Holy Scripture, and whose primary object is "to be exegetical, to interpret the meaning of each book of the Bible in the light of modern knowledge to English readers." Mr. Goudge writes with great facility, simplicity, and sympathy, strictly within the limits of Church doctrine; and no one, Churchman or otherwise, can peruse his work without profit and pleasure. In the "Introduction" he presents vividly the historical circumstances, discusses the authenticity of the Epistle (routing Prof. Steck, of Berne, who has been quite as severely handled by Schmiedel), and reviews and analyzes the contents. The notes generally are very full and instructive. The chief difficulty of Mr. Goudge's task has lain in the treatment of the fundamental problem of the Resurrection (chapter xv.). He should have grasped his nettle more firmly, and left no aspect of the question inadequately handled. On sharply contested matters—and especially matters of supreme importance—a commentator should write as if his opponent stood over against him in the flesh, holding him resolutely to all the points of the argument. Other questions of much delicacy and difficulty Mr. Goudge has treated with considerable breadth and success. On the whole, his commentary ought to be very serviceable, as well as popular.

Essays and Letters. By Leo Tolstoy. Translated by Aylmer Maude. (1s. net. Grant Richards. The World's Classics.)

The fullest, most closely interrelated, and most accurate presentation of the teaching of Tolstoy that has yet been placed before the English public. The collection contains a considerable number of articles that have never before appeared in English; some that have appeared in English before have received the author's correction, in point of errors and omissions; and most of the articles have been specially translated for this edition. Tolstoy himself bearing witness to the faithful rendering of his meaning. The articles all belong to the years 1888–1903. The subjects are religion and moral duty: what man should believe and do, and what man should not believe and not do. The most elaborate article deals with the question: "What is Religion, and wherein lies its essence?" (dated February, 1902). The volume is well printed and nicely got up; and it is remarkably cheap.

Religion for all Mankind. By the Rev. Charles Voysey, B.A. (2s. 6d. net. Longmans.)

Mr. Voysey says that he writes for the help and comfort of his fellowmen, "and chiefly for those who have doubted and discarded the Christian religion," and that his method is to "base every argument on facts—undisputed facts which no one ever even wishes to doubt or deny." He speaks from the standpoint of "the Theistic Faith." His twenty-six chapters are earnest throughout, and well worth reading, however much one may disagree on the conclusions.

EDUCATION.

The Theory of Education in Plato's Republic. By John E. Adamson, M.A. (Lond.), Principal of the Normal School, Pretoria. (4s. 6d. Swan Sonnenschein.)

Mr. Adamson adopts the plan of first giving a summary of Plato's opinions and then adding expository and critical remarks. He thinks the chief value of Plato's theory lies "in the closeness with which it is bound up with social and philosophical problems"; and it is the difficulties arising from this involvement that he labours to clear up for the student. The statement is full and fair, and the exposition is lucid, exhibiting acquaintance with the best commentaries, advancing thoughtful criticisms, and steadily keeping in view the problems of modern education. The subject is thoroughly well considered, systematically digested, and treated with much verve and freshness. The volume is rich in interest, and cannot fail to be most instructive and suggestive.

Aristotle on Education. By John Burnet, Professor of Greek in the University of St. Andrews. (2s. 6d. Cambridge University Press.)

This is a new volume of "The Cambridge Series for Schools and Training Colleges," beautifully printed and attractively got up. The body of it consists of extracts from the "Ethics" and the "Politics" of Aristotle translated, arranged, and annotated by Prof. Burnet. A brief introduction places the student in position "to appreciate the point of view from which Aristotle regards educational problems"; and a "conclusion" is intended "to guard the student against certain natural misunderstandings." For the justification of the interpretation of Aristotle's thought underlying the translation and "differing in some respects from that which is generally accepted," Prof. Burnet refers to his edition of the "Ethics." The treatment is conspicuously able and illuminative, and the volume should be in the hands of all teachers that are still students.

MISCELLANEOUS.

Real Things in Nature. By Edward S. Holden, Sc.D., LL.D., Librarian of the United States Military Academy, West Point. (3s. 6d. Macmillan.)

Dr. Holden calls his work "a reading book of science for American boys and girls," and intends it "to present to young children"—say, about twelve years of age—"a view of the world which shall be, in its degree, complete, useful, and interesting." But it is not much of a "reading" book in the ordinary sense; it is more of a handbook on the elementary points of astronomy, physics, meteorology, chemistry, geology, zoology, botany, the human body, and the early history of mankind. The matter is well selected and disposed, with simple explanation and many (408) illustrations. The book might be turned to good use in school, and inquiring youngsters might do a good deal with it by themselves, if occasional help were at hand.

Captain F. Markham's *Recollections of a Town Boy at Westminster*, 1849-55 (10s. 6d. net, E. Arnold), are presented in charming tone, and will certainly "prove entertaining," not only to his school comrades, but also to "those of the later generation." He claims to be "Westminster born and bred"; his great-grandfather was Head Master in 1753-64 (later Dean of Christ Church, Bishop of Chester, and Archbishop of York), and the school registers swarm with Markhams. The school and precincts, the masters, the Abbey, "in bounds" and "out of bounds," "green," "water," "fields," festivals and fights, the play, election, punishments, scrapes and escapades—all are reviewed with a fond, indulgent, humorous eye; and cousin Sir Clements Markham has furnished "a Westminster glossary" and proved otherwise helpful. Statistics are abundant and interesting, not repellent or overpowering. "The later generation" may learn such lessons as how not to catch a monkey on Turle's chimney; how to wrench off the Bishop's knocker; how to run a half-decker hard and fast on a shoal; how to get "the measles"; how not to buy a ferret in Great Pie (or other) Street, together with the philosophy of "handings," "imposes," "cheek," and "tanning." An invincible boyishness of spirit runs through the book. There is a good dozen of illustrations, the more characteristic from the pen of the author.

In *The New Revolution* (1s. net, Longmans), Mr. A. H. Gilkes, Master of Dulwich, sets forth the views of "the man in the street"—"the ordinary man"—the views that "seem to belong to a man who has simply lived in the world, looking at what is around him and within him." The times are out of joint, as usual; there is "dislocation between the ideals of the mass of ordinary men and the rules, formal or informal, given them to observe by some outside authority, and given, in the main, with the intent to do them good." It is a little book for thoughtful readers, suggestive rather than directly affirmative; but the generality of treatment and the lack of pointed conclusions tell against its wider effectiveness.

Hazell's Annual for 1904 (3s. 6d., Hazell, Watson, & Viney; Hodder & Stoughton) brings the record of events down to the end of last year. There are two special features—a very full index (which will be particularly advantageous) and a vigorous consolidation and classification of articles. The fiscal question is prominent, treated from both sides, and education obtains considerable notice. More than half of the book, we are told, is new matter, while the rest has been so thoroughly revised and rewritten as to be really new. It has made itself indispensable.

One and All Gardening, 1904, edited by Edward Owen Greening (92 Long Acre, 2d.), has a store of practical articles, many of them with a literary flavour, and the illustrations are profuse (200) and very good. The present is the ninth issue of this popular and useful annual.

NEW EDITIONS AND REPRINTS.

The Cambridge University Press issues a second edition of *The Student's Handbook to the University and Colleges of Cambridge*, revised to June 30, 1903 (3s. net). The information is very full and admirably arranged, and, though not official, it is no doubt quite trustworthy. An extremely useful compilation.

Messrs. Longmans have reissued *Elementary Practical Hygiene (Section I.)*, by William S. Furneaux, "with an appendix to meet the requirements of the 1902 Syllabus of the Board of Education." It is a simple, practical, useful volume, with 146 illustrations. (2s. 6d.)

Messrs. Longmans bring out a new and enlarged edition of *Stray Thoughts for Girls*, by L. H. M. Soulsby (2s. 6d. net). It contains much practical advice and suggestion, and the tone is strongly religious. Also a uniform edition of four of Miss Soulsby's thoughtful and suggestive books—(1) *Stray Thoughts on Character*, (2) *Stray Thoughts on Reading*, (3) *Stray Thoughts for Girls*, and (4) *Stray Thoughts for Mothers and Teachers*—all bound in limp leather, with gilt edges (3s. 6d. net each). They would be very acceptable as presents or prizes.

Messrs. Ginn have brought over a third edition of *A First Book in Old English*—grammar, reader, notes, and vocabulary—by Albert S. Cook, Professor of the English Language and Literature in Yale University (3s.). Some minor errors have been corrected, and here and there amplifications and additions have been made. The work is highly esteemed and constantly used by some of our foremost teachers of English. For beginners there is not, so far as we are aware, any more serviceable guide and help.

Money and Banking, illustrated by American History, by Horace White (6s. 6d., Ginn), appears in a second edition, revised up to date. It is a comprehensive and solid treatise. In separate divisions Mr. White handles (1) the evolution of money, (2) Government paper money, and (3) banking, including not only the history of American banking, but also an account of the banking systems of England, Scotland, Canada, France, and Germany. Particular attention is given to the unsettled monetary problems left by the Civil War. Lists of authorities are appended to each chapter. The work is specially "adapted to the use of the class-room," and schools of commerce will find it most serviceable, as well as the general reader.

The Normal Correspondence College Press issues, in a single, thick volume, *Practical School Work* (7s. 6d. net), three substantial and serviceable books—"Practical School Method" and "Practical School Organization," by J. H. Boardman, B.A., L.C.P., and "The Normal School Hygiene," by S. Slefrig, B.Sc.

Messrs. Watts & Co. publish John Stuart Mill's work *On Liberty* in the series of Rationalist Press Association cheap reprints (6d.), with a brief biographical notice by W. B. Columbine, and a photograph of the upper part of the statue to Mill on the Thames Embankment. The type is large and clear; and the reprint will do good service in rendering Mill's important work much more widely known. Also *The Story of Creation*, "a plain account of evolution," by Edward Clodd, with 86 illustrations and tables. (6d.) In the "Extra Series," too, Messrs. Watts publish G. H. Lewes's Prolegomena to his "History of Philosophy," under the new title of *Science and Speculation*. (6d.) All these re-publications are well printed, and well worth study.

FIRST GLANCES.

Classics.

Euripides. Alcestis. Edited by Alexander J. Tate, M.A. 2s. Blackie (Illustrated Greek Series).

[Introduction concise and good; notes tolerably full, and careful; twenty illustrations, one coloured.]

Greek, Attic, A School Grammar of. By Thomas Dwight Goodell, Professor of Greek in Yale University. 5s. net. Appleton (Twentieth Century Text-Books).

[Fresh and independent treatment. Simplifications.]

Greek Syntax. By G. A. Floyd, B.A. 3s. 6d. Longmans.

[Up to sixth Form. Essential points. Interleaved. Spaciously got up. Sure to be very helpful.]

Homer. Iliad I. By L. D. Wainwright, M.A. George Bell (Illustrated Classics).

[Comprehensive introduction; notes judicious and fresh; grammatical appendix; index of proper names; vocabulary. Twenty-five pertinent illustrations. Very good.]

Latin Authors, Matriculation Selections from. By A. F. Watt, M.A. (Oxon.), and B. J. Hayes, M.A. (Lond. and Camb.). 2s. 6d. Clive (University Tutorial Series).

[Introduction (history and antiquities) full; notes brief; lexicon. Selections judicious and adequate.]

Latin Grammar Rules. By W. H. S. Jones, M.A. 6d. net. Norland Press.

[Simple, clear, and useful. Interleaved.]

Livy. Book VI. Edited by F. H. Marshall, B.A. 2s. 6d. Cambridge University Press (Pitt Press Series).

[Full introduction; notes ample and careful. Maps of Early Republican Rome and Western Central Italy.]

Roman Literature, A History of. By Harold N. Fowler, Ph.D., Professor in the College for Women of Western Reserve University. 5s. net. Appleton (Twentieth Century Text-Books).

[Ends with Boëthius (524 A.D.). Four full-page illustrations. Very readable. Capitally printed and got up.]

Rome, The Story of the Kings of. By G. M. Edwards, M.A. 1s. 6d. Cambridge University Press (Pitt Press Series).

[Adapted from Livy; "considerably simplified." Notes brief and pointed. Vocabulary. Maps of Rome and Western Central Italy.]

Tacitus. Life of Agricola. Translated by Sir Henry Savile, 1591. 8d. Norland Press (Plain Texts).

["A rare translation it is . . . one of the most accurate and perfect translations that ever were made into English" (A. A. Wood). Liberal type and tasteful get-up.]

Mathematics.

Arithmetic, McDougall's Practical and Applied, with Mensuration. 1s.; with anwers, 1s. 3d.

[Practical and direct; numerous exercises.]

Digitized by Google

Arithmetic, The School. By W. P. Workman, M.A., B.Sc. 3s. 6d. Clive.
["An edition of 'The Tutorial Arithmetic,' amplified by a large selection of miscellaneous examples arranged in graduated Examination Papers, a fresh set of examples in Approximate Methods, and a further collection of Miscellaneous Problems." Partly rewritten; more difficult matter omitted. A thoroughly good text-book.]

Calculus, Infinitesimal, A First Course in. By Daniel A. Murray, Ph.D., Professor of Mathematics in Dalhousie College, Halifax, N.S. 7s. 6d. net. Longmans.
["Excepting in a few instances, only real functions of real variables are considered." "Simple practical applications of the more elementary notions are introduced as early as possible." "The time-honoured division into differential and integral calculus has not been made."]

Conic Sections and Algebraic Geometry, An Elementary Treatise on. By G. Hale Puckle, M.A. 7s. 6d. Macmillan.
[Ninth edition. Numerous examples and hints for solution; answers. Simpler methods at various points. Well considered and useful work.]

Geometry, A First Book of. By W. Ahrens, M.A. (Lond.), and J. David Paul, B.A. (Cantab.). 9d. Meiklejohn & Holden.
[Theoretical and Practical. Exercises carefully selected.]

Geometry, A School, Part IV. By H. S. Hall, M.A., and F. H. Stevens, M.A. 6d. Macmillan.
[Substance of Euclid II., with III. 35–37. Good exercises.]

Geometry for Technical Students. By E. H. Sprague, Assoc.M.Inst.C.E. 1s. net. Crosby Lockwood & Son.
[60 pages. Preliminary definitions; 48 propositions; and 12 problems in Plane Geometry found useful in drawing. Lucid; useful so far.]

Geometry, Practical, for Art Students. By John Carroll. 1s. 6d. Burns & Oates.
[Fifty-second edition—a sufficient guarantee of utility.]

Graphs. By C. H. French, M.A., and G. Osborn, M.A. 6d. Clive.
[Supplement to "The New Matriculation Algebra." Full and clear; examples abundant; answers. Primarily regards London University Matriculation.]

Groups, Continuous Transformation, Introductory Treatise on Lie's Theory of. By John Edward Campbell, M.A. 14s. net. Clarendon Press.
[Main outlines of Lie's Theory, in elementary form.]

Integers, Elements of the Theory of. By Joseph Bowden, Ph.D., Professor of Mathematics in Adelphi College, Brooklyn. 5s. net. Longmans.
[Two parts ("Primary Numbers" and "Integers"); three parts ("Rational Numbers," "Real Numbers," "Complex Numbers") to follow. "The book has sprung from a desire to put the elementary theory of numbers in a logical form."]

Practical Mathematics, A Manual of. By Frank Castle, M.I.M.E., Mechanical Laboratory, Royal College of Science. 6s. Macmillan.
[To enable students of ordinary abilities to make practical use of some portions of "higher" mathematics. Numerous concrete examples fully worked; exercises, with answers.]

SCIENCE.

Dynamics, The Tutorial. By William Briggs, LL.D., M.A., F.C.S., F.R.A.S., and Prof. G. H. Bryan, Sc.D., M.A., F.R.S. 3s. 6d. Clive.
[Third impression (second edition). "Deals thoroughly with all those portions of the subject which can be satisfactorily treated without the use of higher analytical methods." Numerous examples, with answers. Excellent; especially suitable for London University examinations.]

Electric Lighting and Power Distribution, Vol. II. By W. Perren Maycock, M.I.E.E. 7s. 6d. Whittaker (Library of Arts, Sciences, and Industries).
["An elementary manual of electrical engineering, suitable for students preparing for the Preliminary and Ordinary Grade Examinations of the City and Guilds of London Institute." Numerous questions and exercises. 407 illustrations. Full index.]

Experimental Science, Elementary. Physics, by W. T. Clough, A.R.C.S. (Lond.), F.C.S.; Chemistry, by A. E. Dunstan, B.Sc. (Lond.), F.C.S. 2s. 6d. Methuen (Junior School Books).
[For Junior Local Examinations and the like. 92+64 figures. Numerous examples and exercises.]

Laboratory Physics. By Dayton Clarence Miller, D.Sc., Professor of Physics in Case School of Applied Science. 8s. 6d. Ginn.
["A Student's Manual for Colleges and Scientific Schools." "128 exercises are described." Liberally printed and got up.]

(*Continued on page 86.*)

Smith, Elder, & Co.'s List.

A POPULAR BOOK AT A POPULAR PRICE.

Messrs. SMITH, ELDER, & Co. have pleasure in announcing the publication on February 1st of a Popular 6s. Edition of MR. SIDNEY LEE'S **"LIFE OF QUEEN VICTORIA."**

The Publishers believe that the New Edition of Queen Victoria's Biography is peculiarly well adapted for a School or College Prize Book, and that it will help to stimulate, especially in young men and women who are completing their education, an intelligent interest in their country's affairs.

When the original Half-guinea Edition was published some twelve months since, Sir GEORGE ARTHUR, Bart., writing in the *Daily Mail*, described it as "a book which has elicited an almost unprecedented consensus of approval, and will assuredly take its place in the ranks of standard works."

QUEEN VICTORIA: a Biography.

By SIDNEY LEE, Editor of the "Dictionary of National Biography." New Edition. With Portraits, Map, and Facsimile Letter. Crown 8vo, 6s.

STUDENT'S EDITION OF SIDNEY LEE'S "LIFE OF SHAKESPEARE." With a Photogravure Portrait, and 4 Full-page Illustrations. Crown 8vo, 2s. 6d.

SHAKESPEARE'S LIFE AND WORK. Being an Abridgment, chiefly for the use of Students, of "A Life of William Shakespeare." By SIDNEY LEE, Editor of the "Dictionary of National Biography."

*** Also the Fourth Ordinary Edition of "A Life of William Shakespeare," with two Portraits of Shakespeare, a Portrait of the Earl of Southampton, and Facsimiles of Shakespeare's known Signatures, crown 8vo, 7s. 6d; and the Illustrated Library Edition, in 1 vol., medium 8vo, profusely Illustrated with Photogravures, Topographical Views, &c., 16s.

LITERATURE.—"Mr. Lee's work, both for its literary qualities and its scholarship, does credit to English letters, and it will probably be regarded for years to come as the most useful, the most judicious, and the most authoritative of all existing biographies of the poet."

THE HISTORICAL SERIES FOR BIBLE STUDENTS. Edited by Professors CHARLES FOSTER KENT and FRANK KNIGHT SANDERS.

VOLUME I.—HISTORY OF THE HEBREW PEOPLE: from the Settlement in Canaan to the Division of the Kingdom. By Professor CHARLES FOSTER KENT. With Maps and Plans. Crown 8vo, 6s.
VOLUME II.—HISTORY OF THE HEBREW PEOPLE: from the Division of the Kingdom to the Fall of Jerusalem in 566 B.C. By Professor CHARLES FOSTER KENT. With Maps and a Chart. Seventh Edition. Crown 8vo, 6s.
VOLUME III.—HISTORY OF THE JEWISH PEOPLE: The Babylonian, Persian, and Greek Periods. By Professor CHARLES FOSTER KENT. With Maps. Crown 8vo, 6s.
VOLUME IV.—HISTORY OF THE JEWISH PEOPLE: The Maccabean and Roman Periods. By Professor J. S. RIGGS, D.D. Crown 8vo, 6s.
VOLUME V.—THE LIFE OF JESUS OF NAZARETH. By Professor RUSH REES. Crown 8vo, 6s.
VOLUME VI.—CHRISTIANITY IN THE APOSTOLIC AGE. By Professor GEORGE T. PURVES, Ph.D., D.D. Crown 8vo, 6s.
VOLUME VII.—HISTORY OF THE BABYLONIANS AND ASSYRIANS. By Professor GEORGE S. GOODSPEED, Ph.D. Crown 8vo, 6s.
*** *Other Volumes to follow.*

SHAKESPEARE COMMENTARIES. By Dr. G. G. GERVINUS, Professor at Heidelberg. Translated under the Author's superintendence by F. E. BUNNETT. With a Preface by F. J. FURNIVALL, Esq. Seventh Edition. 8vo, 14s.

Messrs. Smith, Elder, & Co. will be happy to forward a copy of their Catalogue, post free, on application.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,147,020. Annual Income, £400,381.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

LA MÈRE DE LA MARQUISE. By ABOUT. Edited, with Notes and Vocabulary, by M. P. BRUSH, Ph.D. 1s. 3d.

ANNO 1870. By LILIENCRON. Selected and Edited, with Notes and Vocabulary, by Dr. W. BERNHARDT. 1s. 6d.

"This excellent text-book."—*Knowledge.*

INTRODUCTION TO BOTANY. By Prof. W. C. STEVENS. Profusely Illustrated. With Key and Flora, 6s.

"This book approaches the ideal introduction to botany more nearly than any other we have seen. Each chapter commences with clear instructions—on heuristic principles—for laboratory or field work, and concludes with a discussion of the facts observed. The method is in itself an excellent one; the manner in which it is carried out is almost beyond praise, for the experience of the practical teacher and the lucid style of the expert are apparent throughout. The illustrations are numerous, and worthy of the text, which is saying much."—*School World.*

"A well-conceived introduction to the study of plants. . . . The author has attempted the difficult task of so arranging the facts regarding various aspects of plants as to stimulate throughout the independent thought of the student. He has arranged each chapter so that the student first becomes practically acquainted with some at least of the main facts, and follows this with a discussion in which the branch of the subject under consideration is treated of in well arranged and clearly-written paragraphs. . . . Everything is arranged to induce the student not to let his book learning outstrip his basis of observation. Practical work is suggested throughout."
—*Glasgow Herald.*

GEORGE C. HARRAP, 15 YORK STREET, COVENT GARDEN, W.C.

Heath's Practical French Grammar.

By W. H. FRASER, B.A., and J. SQUAIR, B.A., Professors of the Romance Department, Toronto University. With an Introduction by WILLIAM ROBERTSON, M.A., Examiner in Modern Languages for the University of Aberdeen. Crown 8vo. Section I., 2s.; Section II., 2s. 6d.; Complete, 3s. 6d.

Has been introduced into many leading Schools recently:—

St. Olave's Grammar School, Southwark.
Royal High School, Edinburgh.
Yorkshire College, Leeds.
Glasgow Academy.
Royal Academical Institution, Belfast.
Wolverhampton Grammar School.
County High School for Girls, High Wycombe. &c., &c.

Lehrbuch der Deutschen Sprache.

A Practical Course in German for Beginners. By ARNOLD WERNER-SPANHOOFD. Crown 8vo. 2s. 6d.

Is used in the following and many others of the best Institutions:—

The Charterhouse.
Cheltenham College.
Glasgow High School.
Municipal Institute, Birmingham.
Heriot-Watt College, Edinburgh.
Skinners' School, Stamford Hill.
West Ham Technical Institute.
George Watson's College, Edinburgh.
Oundle School.
&c., &c.

Undoubtedly the best Preliminary Readers are

Miss H. A. GUERBER'S Popular Volumes.

CONTES ET LÉGENDES. With Vocabulary. 1s. 6d.

The *Guardian* says:—"Many of the stories are new to us, and those that are well known have been given in some unusual version, so that only by knowing the meaning of the words the sense of the story can be obtained. Their simple style graphic narration, and frequent repetition of words and ideas combine to make them, both for interest and language, eminently desirable as primary reading exercises."

One of H.M.I. (Scotland) writes:—"The idea of the book is so admirable, and the book seems to work so well in practice."

MÄRCHEN UND ERZÄHLUNGEN FÜR ANFÄNGER.

Vol. I., with Vocabulary and Questions in German on the Text;
Vol. II., with Vocabulary. Crown 8vo. 2s. each.

"What I have long been looking for. The clever way in which the author manages to tell a story with the *very fewest grammatical difficulties, and repeats and repeats till the words are bound to impress themselves*, and all this while keeping up the fun and interest of the tale, is both amusing and surprising."—WM. ROBERTSON, M.A., Examiner in Modern Languages to Aberdeen University.

MATHEMATICS.

15414. (Robt. W. D. Christie.)—In any right-angled triangle where the legs a, b differ by unity, and c, the hypothenuse, is an integer, prove $2+3c+4a = x^2+y^2$, and find an infinite number of integral values of a, b, c, x, and y.

Solutions (I.) *by* Lt.-Col. Allan Cunningham, R.E., *and* Professor Sanjána, M.A.; (II.) *by* J. Blaikie, M.A., *and* R. F. Davis, M.A.; (III.) *by the* Proposer.

(I.) Let $a<b$; then $b = a+1$, $a+b = 2a+1 = d$ (suppose),

$$c^2 = a^2+b^2 = 2a^2+2a+1;$$

therefore $2c^2 = (2a+1)^2+1 = d^2+1$, or $d^2-2c^2 = -1$.

The solutions (c, d) of this Diophantine are known to be as below, whence follow a, b:

$c =$	1	5	29	169	985	...
$d =$	1	7	41	239	1393	...
$a =$	0	3	20	119	696	...
$b =$	0	4	21	120	697	...

where each solution (c_r, d_r) may be derived from the two preceding in succession ad inf. by the relation $c_r = 6c_{r-1}-c_{r-2}$, $d_r = 6d_{r-1}-d_{r-2}$.

Another relation is $c_r = 3c_{r-1}+2d_{r-1}$, whence $3c_{r-1}+4a_{r-1}+2 = c_r$. Now c_r is known to be of form $(x_r^2+y_r^2)$ always; therefore

$$3c+4a+2 = x^2+y^2 \text{ always.}$$

By resolving c_r, the successive x_r, y are found:

$c =$	1	5	29	169	985	...
$x =$	1	2	5	12	29	...
$y =$	0	1	2	5	12	...

and each x_r, y_r may be derived from the two preceding in succession ad inf. by the relation $x_r = 2x_{r-1}+x_{r-2}$, $y_r = 2y_{r-1}+y_{r-2}$.

(II.) Let y, z be two integers which satisfy the relation

$$2yz-1 = y^2-z^2 \quad \ldots\ldots(1);$$

then y', z' will also satisfy the equation, if $y' = 5y+2z$, $z' = 2y+z$. For, substituting, we obtain $2(5y+2z)(2y+z)-1 = (5y+2z)^2-(2y+z)^2$, or

$$2(10y^2+9yz+2z^2)-1 = (7y+3z)(3y+z) = 21y^2+16yz+3z^2,$$

which reduces to (1).

If we take $a = y^2-z^2$, $b = 2yz$, $c = y^2+z^2$, then $a^2+b^2 = c^2$, and $a = b-1$ by (1). Also

$$2+3c+4a = 2(2yz-y^2+z^2)+3(y^2+z^2)+4(y^2-z^2) = 5y^2+4yz+z^2 = x^2+y^2,$$

when $x = 2y+z$. If we substitute y', z' for y, z, we find that

$$x' = 2y'+z' = 12y+5z = 5x+2y, \quad y' = 5y+2z = 2x+y, \quad z' = x.$$

Equation (1) is satisfied by the values $y = 2$, $z = 1$, which give $x = 5$, $a = 3$, $b = 4$, $c = 5$, $2+3c+4a = 29 = 5^2+2^2$. The following table gives the first three cases, and an infinite number may be derived by means of the relations established above:—

x	y	z	a	b	c	$2+3c+4a$
5	2	1	3	4	5	29
29	12	5	119	120	169	985
169	70	29	4059	4060	5741	33461

(III.) Let q_n be the n-th convergent of Y in the equation

$$X^2-2Y^2 = \pm 1;$$

then $4(q_n^2-q_{n-1}^2)+3(q_n^2+q_{n-1}^2)+2 = (2q_n+q_{n-1})^2+q_n^2$ .....(1)

or $4(2q_nq_{n-1})+3(q_n^2+q_{n-1}^2)+2 = (2q_n+q_{n-1})^2+q_n^2$ .....(2).

In the theorem let a or $b = q_n^2-q_{n-1}^2$ or $2q_nq_{n-1}$,

$$c = q_n^2+q_{n-1}^2, \quad x = 2q_n+q_{n-1}, \quad y = q_n.$$

For the connexion v. Dr. Muir, *Proc. Roy. Soc. Edin.*, p. 264.

15383. (A. M. Nesbitt, M.A.)—If $\alpha+\beta+\gamma$ be a multiple of π, and if $x^r\sin r\alpha+y^r\sin r\beta+z^r\sin r\gamma$ vanishes when $r = 1$ and $r = 2$, it vanishes for any positive integral value of r.

Solution by the Proposer.

If we take $x\sin\alpha = q-r$, $y\sin\beta = r-p$, $z\sin\gamma = p-q$, we may put $x\cos\alpha = \lambda p+\mu$, $y\cos\beta = \lambda q+\mu$, $z\cos\gamma = \lambda r+\mu$, in which λ, μ may at present have any values. These yield

$$x(\cos\alpha+\lambda\sin\alpha) = \lambda(p+q-r)+\mu = \lambda q+\mu-\lambda y\sin\beta = y(\cos\beta-\lambda\sin\beta) \quad \ldots\ldots(1)$$

So also $y(\cos\beta+\lambda\sin\beta = z(\cos\gamma-\lambda\sin\gamma)$ ..... (2),

$$z(\cos\gamma+\lambda\sin\gamma) = x(\cos\alpha-\lambda\sin\alpha) \quad \ldots\ldots(3).$$

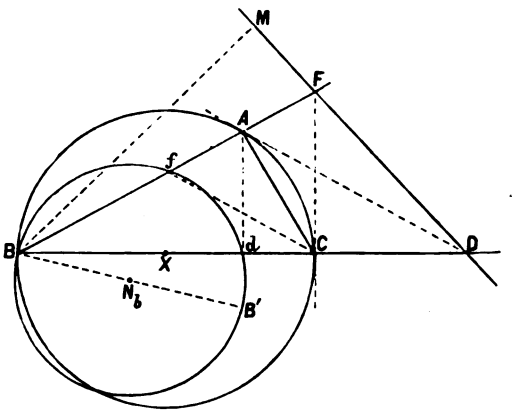
By multiplying (1), (2), and (3) we get $\lambda^2+\Sigma\cot\beta\cot\gamma = 0$; therefore $\lambda^2 = -1$. Hence $x(\cos\alpha+i\sin\alpha) = y(\cos\beta-i\sin\beta)$, ...; therefore $\Sigma x^n(\cos n\alpha+i\sin n\alpha) = \Sigma x^n(\cos n\alpha-i\sin n\alpha)$; therefore $\Sigma x^n\sin n\alpha = 0$.

10113. (Professor Gob).—Lorsque la base BC d'un triangle ABC est fixe et que l'angle de Brocard est constant, les centres des cercles de Neuberg (N_b), (N_c) décrivent une circonférence; le cercle (N_b) a pour enveloppe un limaçon de Pascal; la droite de Lemoine de ABC enveloppe une conique ayant pour foyers les points B, C.

Solutions (I.) *by* C. E. Youngman, M.A.; (II.) *by* R. Tucker, M.A.; (III.) *by* Professor Sanjána, M.A.

(I.) Draw AD, CF touching the circle ABC, and Cf, Ad parallel to them, the points D, d being on BC and F, f on AB. Then FD is the Lemoine line, and fd is parallel to it; also the triangles ACf, dAC have angles A, B, C, and therefore the circle Bfd is (N_b). Let B′ be the point opposite to B on this circle.

The triangle N_bCA is isosceles, with vertical angle 2ω; therefore $CN_b = \frac{1}{2}b\operatorname{cosec}\omega$. And the radius of the circle N_b (which is orthogonal to the circle with centre C and radius b) is $\frac{1}{2}b\operatorname{cosec}\omega\sqrt{(1-4\sin^2\omega)}$, or $e\,CN_b$, if we write e for $\sqrt{(1-4\sin^2\omega)}$. Therefore $BN_b : CN_b = $ const., and N_b describes a circle whose centre divides BC externally in the ratio $e^2 : 1$. Its radius is $\frac{1}{4}ae\operatorname{cosec}^2\omega$. And naturally N_c describes an equal circle, symmetrical on BC to the other. The locus of B′ is also a circle.



Invert the figure from B; then (N_b) becomes a straight line n_b, and B′ becomes b', the projection of B on n_b; therefore the locus of b' is a circle. Hence the envelope of n_b is a conic having B for focus, and the envelope of (N_b) is the focal inverse of this—a limaçon.

Draw BM perpendicular to FD, and bisect BC at X. Then BfB′, BMD are similar triangles, and BM . BB′ = Bf . BD = BC . BA; therefore BM . BN_b = BX . BA, and the triangles BMX, BAN_b are similar; therefore XM : XB = AN_b : BN_b = 1 : e and M moves in a circle about X. Hence FD touches an ellipse with focus B, centre X, and eccentricity BX : XM or e; which is also the eccentricity of the Brocard ellipse.

[Rest in Vol.]

15357. (A. M. Nesbitt, M.A.)—Evaluate $\int_0^\infty \frac{x\,dx}{e^{cx}\cosh x}$, c being between +1 and −1.

Solution by G. H. Hardy, M.A.

Since $e^{-cx}\operatorname{sech}x = 2\sum_0^\infty(-)^n e^{-(c+2n+1)x}$ and $\int_0^\infty e^{-px}x\,dx = \frac{1}{p^2}$ $(p>0)$,

$$\int_0^\infty \frac{x\,dx}{e^{cx}\cosh x} = 2\sum_0^\infty \frac{(-)^n}{(c+2n+1)^2} = 2\frac{d^2}{dc^2}\log[\Gamma\tfrac{1}{4}(c+1)/\Gamma\tfrac{1}{4}(c+3)].$$

Digitized by Google

By integration with respect to c we can deduce the values of

$$\int_0^\infty \frac{e^{-cx}}{\cosh x}\,dx, \quad \int_0^\infty \frac{e^{-ax}-e^{-bx}}{\cosh x}\,\frac{dx}{x}.$$

It is not necessary that $c<1$; the condition $c>-1$ is sufficient.

5225. (The late T. Cotterill, M.A.)—If the sides ab, $a'b'$ of two triangles abc, $a'b'c'$ meet in z and a transversal cut ca, cb, $c'a'$, $c'b'$ respectively in $\alpha, \beta, \alpha', \beta'$, prove that the two conics $zab'\alpha\beta'$, $za'b\alpha'\beta$ cut again in three points on the cubic locus of points at which the three pairs of points (aa'), (bb'), (cc') subtend angles in involution.

Solution by Professor Nanson.

The locus of the intersection of the two conics, for different positions of the transversal, is a cubic. For, if $x, y, \gamma, x', y', \gamma'$ are the lines ca, $c'b'$, ab', $c'a'$, cb, $a'b$ and ω is the variable transversal, the two conics are $xy = k\gamma\omega$, $x'y' = k'\gamma'\omega$, where k, k' are constants determined by the fact that the conics pass through z. Eliminating ω, the locus of the remaining three intersections is the cubic $k'xy\gamma' = kx'y'\gamma$. This cubic passes through the nine intersections of x, y, γ with x', y', γ. The involution cubic also obviously passes through these nine points. Now, if p be the intersection, distinct from c, c', z, of the conics corresponding to the position cc' of the transversal ω, we clearly have

$$p(ab'cc') = z(abcc) = z(a'bc'c) = p(a'bc'c)$$

and therefore p is also a point on the involution cubic. Hence the two cubics coincide.

15462. (R. Chartres.)—If $1/x = \cdot\dot{a}bcd\ldots h\dot{k}$ in any scale, radix $= r$, then $p/x = \cdot\dot{k}abcd\ldots\dot{h}$. Find p, and show that there is an infinite number of scales where $1/x$ gives the same number of digits as above, and where p/x can be obtained by putting the last digit first. Give also the general value for the radix.

Solution by the Proposer.

$1/(mr-1)$ can be expressed as a recurring radix fraction by putting unity for the last digit and multiplying by m towards the left; therefore when $1/x = k/(mr-1)$ the fraction $= \cdot\dot{a}bc\ldots h\dot{k}$ and $m/x = \cdot\dot{k}abc\ldots\dot{h}$. Also, since $kx = mr-1$, therefore $1/x = (k+mn)/[m(r+nx)-1]$ will have in the scale, radix $(r+nx)$, the last digit $(k+mn)$ and m for multiplier, and m/x will be found by putting the last digit first, thus: $\frac{1}{7}$ with radix 3, 10, 17, $\ldots = \cdot\dot{0}10212\dot{1}$, $\cdot\dot{1}42857\dot{1}$, $\cdot\dot{2}74(14)9(12\dot{1})$, $\ldots$, the multiplier in each case being 5, and $\frac{5}{7}$ will be found at once by putting the last digit first.

15469. (Lt.-Col. Allan Cunningham, R.E.)—Find a series of pairs of right-angled triangles whose sides $(a, b, c; a', b', c)$ are integers, and with a common hypothenuse (c), and such that $c-b = b-b' = 1$.

Solutions (I.) *by* Rev. T. Wiggins, B.A.; (II.) *by* D. Biddle; (III.) *by the* Proposer.

(I.) The sides are $[\sqrt{(2b+1)}, b, b+1]$, $[2\sqrt{b}, b-1, b+1]$; therefore $\sqrt{(2b+1)}$, $\sqrt{b}$ must be integral. Let $2b+1 = x^2$, $b = y^2$; therefore $x^2-2y^2 = 1$, which is satisfied by $x = 3$, $y = 2$. Hence

$$(x^2-2y^2) = (3^2-2.2^2)^n;$$

therefore $$(x+\sqrt{2}\,y)(x-\sqrt{2}\,y) = (3+2\sqrt{2})^n(3-2\sqrt{2})^n.$$

Now put $x+\sqrt{2}\,y = (3+2\sqrt{2})^n$ and $x-\sqrt{2}\,y = (3-2\sqrt{2})^n$; therefore $2x = (3+2\sqrt{2})^n+(3-2\sqrt{2})^n$, $2\sqrt{2}\,y = (3+2\sqrt{2})^n-(3-2\sqrt{2})^n$. As n may have any value, we find the series of values of x and y, whence we obtain b.

Cor.— $n = 1$, $y = 2$, $b = 4$; therefore triangles are (3,4,5), (4, 3, 5). $n = 2$, $y = 12$, $b = 144$; therefore triangles are (17, 144, 145), (24, 143, 145). $n = 3$, $y = 70$, $b = 4900$; therefore triangles are (99, 4900, 4901), (140, 4899, 4901).

[Rest in Vol.]

9836. (Professor Lévy.)—Soient PA, PB, PC, PD les quatre normales issues d'un point quelconque P à une ellipse. Démontrer (1) que si la droite AB tourne autour d'un point fixe M, la corde CD enveloppe une parabole tangente aux deux axes; (2) la réciproque; et (3) trouver le lieu des foyers de ces paraboles lorsque le point M parcourt une droite donnée.

Solution by A. M. Nesbitt, M.A., Frances E. Cave, *and others.*

(1) If the chords $lx+my = 1$, $l'x+m'y = 1$ ..... (1, 2)

of the ellipse $x^2/a^2+y^2/b^2 = 1$ be such that the normals at their extremities are concurrent, then (C. Smith, § 196)

$$a^2ll' = b^2mm' = -1 \quad \ldots\ldots (3).$$

Now, if (1) passes through (p, q), we find at once by ordinary methods that the envelope of (2) is

$$(b^2xp-a^2yq)^2+2a^2b^2(b^2ap+a^2yq)+a^4b^4 = 0 \quad \ldots\ldots (4),$$

which is plainly a parabola touching the principal axes.

(2) Again, if (2) be a tangent to $\sqrt{(\lambda x)}+\sqrt{(\mu y)}+\sqrt{\nu} = 0$, we have $\lambda/l'+\mu/m' = \nu$, which, by virtue of (3), gives $a^2\lambda l+b^2m\mu+\nu = 0$, showing that (1) passes through the point $(a^2\lambda, b^2\mu)$.

Now we readily find for the focus of (4)

$$x/b^2p = y/a^2q = -a^2b^2/(b^4p^2+a^4q^2) = \sqrt{(x^2+y^2)}/\sqrt{(b^4p^2+a^4q^2)},$$

whence $b^4p^2+a^4q^2 = a^4b^4/(x^2+y^2)$. Thus

$$p = -b^2x/(x^2+y^2), \quad q = -a^2y/(x^2+y^2);$$

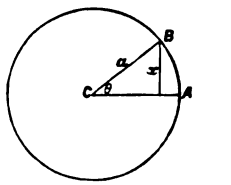
so that, if (p, q) move on the line $\alpha x+\beta y = 1$, the locus of the focus is the circle $x^2+y^2+\alpha b^2x+\beta a^2y = 0$.

15391. (R. Chartres.)—Find the mean value of Z^n, where (1) Z = area of the triangle formed by joining two random points in a circle with the centre, (2) Z = volume of the tetrahedron formed by joining three random points in a sphere with the centre.

Solution by the Proposer.

(1) $\mathrm{M}(Z^n) = (\frac{1}{2}a)^n\,\mathrm{M}(x^n)\,[2/(n+2)]^2$ for A and B to move internally

$$= (\tfrac{1}{2}a^2)^n\,\frac{2^3}{(n+2)^2}\,\pi\int_0^{\frac{1}{2}\pi}\sin^n\theta\,d\theta.$$

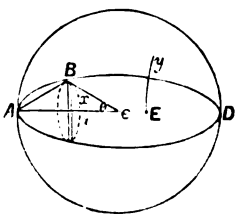


(2) Let A and B be random points on the sphere, and y a perpendicular from any point in the solid hemisphere on the plane ABDC.

$$\mathrm{M}(Z^n) = (\tfrac{1}{2}a)^n\,\mathrm{M}(x^n)\,(\tfrac{1}{3})^n\,\mathrm{M}(y^n)\left(\frac{3}{n+3}\right)^2$$

$$= (\tfrac{1}{2}a)^n a^n\int_0^{\frac{1}{2}\pi}\sin^{n+1}\theta\,d\theta\,(\tfrac{1}{3})^n \times \frac{3a^n}{(n+1)(n+3)}\left(\frac{3}{n+3}\right)^2$$

$$= (\tfrac{1}{6}a^3)^n\,\frac{3^3}{(n+1)(n+3)^3}\int_0^{\frac{1}{2}\pi}\sin^{n+1}\theta\,d\theta.$$



If $n = 1$, then $\mathrm{M}_1 = \dfrac{9}{1024}\pi a^3$.

15344. (R. W. D. Christie.)—Prove that any integer

$$N \equiv r^n.d_n+r^{n-1}.d_{n-1}+\ldots+s,$$

when (1) r = any radix whatever, (2) s = sum of the digits, (3) $d_n = n$-th differential divided by $n!$ *Ex.:*

(1) $12345 \equiv 9^4.1+9^3.6+9^2.15+9^1.20+15 = 12345$,

where $r = 10$, $s = 15$, $d_4 = 1$, $d_3 = 6$, $d_2 = 15$, $d_1 = 20$;

(2) $54321 \equiv 7^5.1+7^4.10+7^3.32+7^2.46+7^1.37+15 = 54321$,

where $r = 8$, $s = 15$, $d_5 = 1$, $d_4 = 10$, $d_3 = 32$, $d_2 = 46$, $d_1 = 37$.

Solution by the Proposer.

(1) In Question 15191 (for solution of which see *Mathematical Reprint*, New Series, Vol. IV., p. 58) let $N = AX^2+BXY+CY^2$; then

$du/dX = 2AX+BY$ and $du/dY = 2CY+BX$,

$du/dx = 2A(sx+1)+B(sy+1)$, and $du/dy = 2C(sy+1)+B(sx+1)$;

therefore

$$(2AX+BY)\{B(sx+1)+2C(sy+1)\}-(2CY+B)\{2A(sx+1)+B(sy+1)\} = 0.$$

Thus $(B^2-4AC)(Y)(sx+1) = (B^2-4AC)(X)(sy+1)$; therefore

$$Y-X = s(Xy-Yx) = 0,$$

which proves the theorem. (See Prof. Young's *Calculus*, p. 82.) Similarly for higher forms.

(2) In Question 15191 we have $N = AX^n+BX^{n-1}+\ldots+Z$, where

$$X = (Ax^n+Bx^{n-1}+\ldots+Z)\,k+x = sk+x, \text{ say;}$$

then $$N = S\left(\frac{k^ns^{n-1}}{n!}\frac{d^nu}{ds^n}+\frac{k^{n-1}s^{n-2}}{n-1!}\frac{d^{n-1}u}{ds^{n-1}}+\ldots+1\right).$$

Now Question 15344 is a special case of this theorem where $x = 1$, X = any radix, or $r = sk+x = sk+1$; therefore $k = 1/s(r-1)$. Thus

$$(k^ns^n/n!)(d^nu/ds^n)$$

becomes $\{(r-1)^n/n!\}\,d_n$, and generally

$$N = \{(r-1)^n/n!\}\,d_n+\{(r-1)^{n-1}/(n-1)!\}\,d_{n-1}+\ldots+S.$$

In the examples given we have

$$12345 = 1.10^4+2.10^3+3.10^2+4.10^1+5 = 9^4.d_4+9^3.d_3+9^2.d_2+9^1.d_1+15$$

where d_1N $(r=1)$ gives $4+6+6+4 = 20$, $(d_2/2!)$N gives $(12+12+6)/2 = 15$,

Digitized by Google

$\{(d_3)/3!\}$ N gives $(24+12)/6 = 6$, $(d_4/4!)$ N gives $1 = 1$. Hence

$$12345 = 9^4.1 + 9^3.6 + 9^2.15 + 9^1.20 + 15$$

and

$$54321 = 9^4.5 + 9^3.24 + 9^2.45 + 9^1.40 + 15.$$

It is clear the theorem leads to other developments.

15249. (R. W. D. Christie.)—If r be any primitive root of a prime of the form $4m-1$, then three others are r^{-1}, $(ri)^2$, $(ri)^{-2}$, where $i = \sqrt{(-1)}$.

Solution by Lt.-Col. Allan Cunningham, R.E.

Let $\rho = 1/r$; then $\rho r = 1$; therefore $\rho^{\frac{1}{2}(p-1)} r^{\frac{1}{2}(p-1)} = 1$. But $r^{\frac{1}{2}(p-1)} \equiv -1 \pmod p$ [by hypothesis];

therefore $\rho^{\frac{1}{2}(p-1)} \equiv -1 \pmod p$, and, since no exponent less than $\frac{1}{2}(p-1)$ will suffice to remove r from the above equality, therefore $\frac{1}{2}(p-1)$ is the lowest exponent for ρ also; so that ρ is a primitive root of p.

Next $(i^{\frac{1}{2}(p-1)})^2 = (-1)^{2m-1} = -1$; therefore

$$(r^2 i^2)^{\frac{1}{2}(p-1)} \equiv (r^{p-1})(i^2)^{\frac{1}{2}(p-1)} \equiv (+1)(-1) \equiv -1 \pmod p.$$

Hence, as no exponent less than $\frac{1}{2}(p-1)$ will suffice to reduce $r^2 i^2$ to -1, it follows that $r^2 i^2$ is a primitive root. Hence (by the first theorem above) its reciprocal $(r^2 i^2)^{-1}$ is also a primitive root.

15450. (Professor Langhorne Orchard, M.A., B.Sc.)—Find the product of the sum and the difference of the series—

$1 + 6 + 21 + 52 + 105 + \ldots$ to n terms, $3 + 14 + 39 + 84 + 155 + \ldots$ to n terms.

Solutions (I.) *by* Rev. T. Wiggins, B.A.; (II.) *by* C. M. Ross.

(I.) Let the sums and the terms of the series be respectively A, B; $u_1 + u_2 + \ldots$, $v_1 + v_2 + v_3 + \ldots$. Then $v_r + u_r = 2r(r^2+1)$; therefore

$$A + B = 2\left[\tfrac{1}{4}[n(n+1)]^2 + \tfrac{1}{2}[n(n+1)]\right] = \tfrac{1}{2}n(n+1)(n^2+n+2).$$

Also $v_r - u_r = 2r^2$; therefore $A - B = \frac{1}{3}[n(n+1)(2n+1)]$; whence

$$(A+B)(A-B) = \tfrac{1}{6}[n(n+1)]^2(2n+1)(n^2+n+2).$$

(II.) Sum of series $= 4 + 20 + 60 + 136 + 260 \ldots\ldots$ (i.),

difference of series $= 2 + 8 + 18 + 32 + 50 \ldots\ldots$ (ii.).

In (i.) the successive order of differences are

16 40 76 124

24 36 48

12 12.

Hence the n-th term is

$$4 + 16(n-1) + 12(n-1)(n-2) + 2(n-1)(n-2)(n-3) = 2n^3 + 2n.$$

In (ii.) the successive orders of differences are

6 10 14 18

4 4 4.

Hence the n-th term is $2 + 6(n-1) + 2(n-1)(n-2) = 2n^2$;

therefore the sum of the series (i.)

$$= 2\left[\frac{n(n+1)}{2}\right]^2 + \frac{2n(n+1)}{2} = \tfrac{1}{2}n(n+1)(n^2+n+2)$$

and the sum of the series (ii.) $= \frac{1}{3}n(n+1)(2n+1)$;

therefore product of (i.) and (ii.) $= \frac{1}{6}n(n+1)^2(2n+1)(n^2+n+2)$.

QUESTIONS FOR SOLUTION.

15498. (G. H. Hardy, M.A.)—Prove that the reciprocal of the product of two determinants is the product of their reciprocals.

15499. (Lt.-Col. Allan Cunningham, R.E.)—Let N = 111...1 consist of q^n units in the scale of $r^m = mq + 1$, q being prime; then $N = Mq^n$.

15500. (Professor E. B. Escott.)—Find two large consecutive numbers ($> 10^{14}$) all of whose prime factors are less than 100, *e.g.*:

$a^2 = 7534241^2 = 11^2.13^2.19^2.47^2.59^2$, $a^2 - 1 = 2^6.3^3.5.7^2.31^2.41^2.83$;

$a^2 = 15473809^2 = 13^4.19^2.61^2.79^2$,

$a^2 - 1 = 2^5.3^3.5.7^2.11.17.41.43.47.73$.

15501. (Professor Nanson.)—If $a > b > 1$, and n is a positive integer, prove that

$$\frac{1}{a}\,\frac{a^{n+1}-1}{a^{n-1}-1} > \frac{1}{b}\,\frac{b^{n+1}-1}{b^{n-1}-1}.$$

15502. (Professor Sanjána, M.A.)—The things A are sold 3 for 1d.; the things B, 5 for 2d.; C, 7 for 3d.; D, 9 for 4d.; and E, 4 for 10d. Find how 100 articles, containing things of all kinds A, B, C, D, E, can be bought for 100d.

15503. (Robt. W. D. Christie.)—Prove that the so-called Pellian equation may be reversed by the *dual principle* as follows:—Since

$$(4a^3+6a^2+6a+2)^2 - (4a^2+4a+5)(2a^2+2a+1)^2 = -1$$

for all values of the letter, then

$$(2a^3+6a^2+6a+4)^2 - (5a^2+4a+4)(a^2+2a+2)^2 = -a^6.$$

Give a few other examples, and show how to introduce the prime roots.

15504. (Rev. F. H. Jackson.)—Show

$$\sum_{r=1}^{r=\infty} x^{\frac{1}{2}r(r+1)} = \sum_{r=1}^{r=\infty} \frac{(1-x)(1-x^3)\ldots(1-x^{2r-1})}{(1-x^2)(1-x^4)\ldots(1-x^{2r})}\, x^r.$$

15505. (L. Isserlis.)—If $s_r = \cos^r \frac{1}{15}\pi + \cos^r \frac{3}{15}\pi + \ldots + \cos^r \frac{15}{15}\pi$,

then (i.) $s_2 + s_4 + 7(s_1 + s_3 + s_5) = 0$, (ii.) $3s_2^2 + 16 s_4 s_5 = 0$.

15506. (Professor Neuberg.)—Trouver l'équation aux dérivées partielles des surfaces dont les sections par les plans menés suivant l'axe OZ sont des paraboles de paramètre donné, l'axe de chaque parabole étant dirigé suivant la trace de son plan sur le plan xy.

15507. (Professor Neuberg.)—Un cercle de rayon a se déplace de manière que son centre O parcourt une droite donnée d. D'un point donné A on mène les tangentes AM, AM'. Trouver (1) le lieu des points M, M', (2) l'enveloppe de la droite MM', (3) l'enveloppe des rayons OM, OM'.

15508. (R. F. Davis, M.A.) [Suggested by Mr. C. E. Youngman's Question 15435.]—Three circles touch each other externally and touch externally the circum-circle of a given triangle ABC at A, B, C respectively. Show that their radii are $R/(\cot B + \cot C - 1)$, ...

15509. (C. M. Ross.)—Having given the base and the altitude of a triangle, and that one of the angles at the base is double the other, show how to construct the triangle.

15510. (Rev. T. Roach, M.A.)—Give a proof of the known equality $\tan^{-1}[(i\sin\theta)/i] = \log\tan(\frac{1}{4}\pi + \frac{1}{2}\theta)$, and hence show that $i\tan^{-1} i = \infty$.

15511. (A. M. Nesbitt, M.A.)—If

$$\lambda \equiv a\alpha/l + b\beta/m + c\gamma/n, \quad \lambda' = a\alpha/l' + b\beta/m' + c\gamma/n'$$

be two straight lines intersecting at ω and cutting the sides of the triangle of reference in (a, b, c), (a', b', c'), prove (1) that the four circles Abc, Bca, Cab, ABC meet in a point O, whose co-ordinates are

$$[a/(m-n),\ b/(n-l),\ c/(l-m)];$$

(2) that the point P common to the four circles Abc, $Ab'c'$, $\omega bb'$, $\omega cc'$ has its co-ordinates given by

$$a\alpha/\{ll'\delta K/\Delta - [a^2(B+c)]/L\} = M\beta/Bb = N\gamma/Cc$$

where $\Delta = \begin{vmatrix} ll & mm' & nn' \\ l & m & n \\ l' & m' & n' \end{vmatrix}$, A, B, C are the minors of ll', mm', nn' in Δ,

$\delta = \begin{vmatrix} 1 & 1 & 1 \\ l & m & n \\ l' & m' & n' \end{vmatrix}$, $L = (m-n)(m'-n')$, $M = (n-l)(n'-l')$, $N = \ldots$, and

$K = Aa^2/L + Bb^2/M + Cc^2/N$; and (3) that the points O, O' P, lie on the circle

$$(abc\Delta/LMN)(a\alpha + b\beta + c\gamma)(L\alpha/a + M\beta/b + N\gamma/c) = K(a\beta\gamma + b\gamma\alpha + ca\beta),$$

an equation whose symmetry shows that it passes through Q, R, the respective common points of the circles $(Bca, Bc'a', \omega cc', \omega aa')$ and $(Cab, Ca'b', \omega aa', \omega bb')$.

May be ordered and obtained in the usual way from all School Supply Firms and Booksellers, or direct from

H. SNELLING, Educational Publisher, WAREHAM.

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL AND LOGICAL FOUNDATIONS OF INTELLECTUAL EDUCATION.

To be delivered by W. E. Johnson, M.A., Sidgwick Lecturer in Moral Science in the University of Cambridge.

SYLLABUS.

I. Provisional definition of education as a practical science. Its dependence upon psychology. Its connection with the normative sciences of logic, aesthetics, and ethics. Education must assume general agreement with respect to the ultimate ends of life. It is a science of means, not of ends. A comparison between the lecturer's standpoint in education and the theories of Herbart. How far intellectual, aesthetic, and moral education can be distinguished. The position of so-called physical education. The practical opportunities afforded to the teacher of contributing to psychological observation. The two chief methods of obtaining particular psychological data (i.) the introspective, (ii.) the interpretative. Range, difficulties, and connections of these two methods.

II. General analysis of mental states. The three fundamentally distinct factors—knowledge, feeling, activity. These three regarded as mutually dependent, not as antagonistic. Especially in the higher forms of mental process, action is prompted by feeling and guided by knowledge; and such action is spoken of as the manifestation of the will. Different forms and different degrees of activity. Education as mainly concerned with the control of the conscious activities of the child. Preliminary definitions of such terms as conation and purpose, interest and attention, &c.

III. The classification of intellectual processes by reference to so-called faculties. Preliminary definitions of sensation, perception, observation, memory, imagination, conception, reasoning. The practical errors that have arisen from a false view of this classification—things connected which should be separated, and things separated which should be connected. The key for understanding the due connection and separation of educational aims and influences to be found in the principle of unity of interest. Interest as progressive, and as involving subjective activity. The various faculties developed *pari passu* as they are brought to bear upon any object of study. The growing stages of childhood distinguished by the objects of interest, rather than by the prevalent exercise of one or other faculty. Two-fold function of the teacher in regard to interest. The whole theory summed up in the doctrine of apperception.

IV. General account of intellectual development. Active and receptive phases—the former continuously increasing in predominance as compared with the latter. Parallel growth in mind and brain. Retentiveness and modifiability. Differentiation and assimilation. Powers of distinguishing and of connecting. Facility and familiarity. The different forms of analysis and synthesis. Mental process and mental product. Permanent acquisitions and variable applications.

V. Perception as a direct and purposive co-ordination of sensory and motor elements. Temporal and spatial synthesis. Acquisition of physical aptitudes by practice. The gradually attained control and co-ordination of the sense-organs and organs of movement. Sense-discrimination aided by motor production—speaking, drawing, singing, &c. Imitation. Observation as systematized control of perceptual processes. The interest of curiosity. Prospective and retrospective attention and "meaning." Continuity of purpose and interest in such activities as listening and watching.

VI. Association or suggestion. Distinction and relation between integration and redintegration. Association (*a*) between parts contained in a common whole, and (*b*) between wholes containing a common part. Fundamental principles underlying all cases of association. Different forms of association. Activity and interest involved in association. Control of association by purpose. Pedagogic maxims based on the doctrine of association. Technical aids to association. Co-operative and antagonistic associations.

VII. Memory—ambiguities of the term. Some writers limit it to reminiscence. Broadly it includes the reproduction, in some kind of connected whole, either (*a*) of movements or (*b*) of images or (*c*) of ideas. In particular, verbal memory is based on the repetition, in a connected series, of the articulatory movements of speech. Man's intellectual powers as dependent largely on the control and initiation of these movements. Language as aiding and aided by accompanying images and ideas through a double process of association. The free reproduction, in varied forms of language, of significant trains of images and ideas. The teaching of composition. First beginnings of constructive thought.

VIII. Imagination: its three kinds, reproductive, interpretative, and originative. Imagination and perception cover the same ground. The power of imagination gauged by (*a*) its vividness and consequent influence upon feeling, (*b*) its subservience to purposive control. Childish imagination not more vivid, but less controlled, than that of the adult. Difficulties in exercising the child's imagination through the medium of words. Practically, imagination cannot be separated from ideation. Illustrations from the teaching of geography and history. The connection of imagination with aesthetic feeling and appreciation. Poetry and literature.

IX. Ideas and conceptions. How knowledge passes from the relatively particular and indefinite to the relatively general and definite. The development of knowledge as evidenced by the presence of agreements or differences, not by the absence of differences or agreements. How to test a child's powers of thought by reference to his use of language. Ignorance of the conventions of adult language often confused with defect in the power of perceiving agreements or differences between things. Power of understanding to be measured by complexity and consistency in the use of language. The child's employment of nouns, adjectives, verbs, &c. The concrete and the abstract.

X. Terms and elementary propositions. Comparison between the psychological and the logical account of the intension and extension of terms. Logical definition and division. The proposition as expressing the analytic-synthetic function of thought. The conceptions of thinghood, causality, and personality. The judgment as arising out of an attitude of interrogation or apparent inconsistency. Suspense and conviction. The apprehension of truth and reality as involving counterlimitation between subject and object. The developing conception of self in its relation to other selves.

XI. General judgments and reasoning. The avoidance of inconsistency. Deductive and inductive inference. Distinctions between the psychological principles of discovery and the logical principles of proof. The teaching of deductive and of inductive sciences. The importance of the heuristic method in both. Such teaching should promote (*a*) activity, (*b*) understanding, (*c*) retention. Danger in the teaching of inductive sciences of encouraging unsound reasoning. Educational aspects of the well known methods of induction.

XII. New formulations and general summary of principles, with further applications.

C. R. HODGSON, B.A., *Secretary.*

TEXT-BOOKS FOR HIGHER SCHOOLS

Edited by Rev. C. S. DAWE, late of St. Mark's College, Chelsea.

CONCISE. SIMPLE. COMPLETE.

These books are specially prepared for the Oxford and Cambridge Preliminary and Junior **Local Examinations** and Candidates for **Minor Scholarships.** The Series consists of the following books:—

ARITHMETIC.

Small amount of **Theory,** large amount of **Practice.** Worked-out **Examples** for each step. Prominence given to the **Metric System. Laboratory Exercises** in a Special Section.

GEOGRAPHY.

Physical facts made the basis of **Political. Commercial** aspects kept constantly in view. British Empire fully treated.

Many Coloured Maps and Diagrams.

ENGLISH GRAMMAR.

Examples made the basis of instruction. **Analysis** introduced **early.** Aids to **correct speaking** a prominent feature. Plenty of scope given for **"practice."**

ENGLISH HISTORY.

Contains landmarks of our national history. More than usual attention given to last three centuries. **The Growth and Greatness of the Empire specially considered.**

PUBLISHED AT ONE SHILLING EACH.

The *Schoolmaster* says:—"We can speak well of all. Each book will be found just the kind to place in the hands of pupils beginning a systematic course of study in these subjects. The Arithmetic strikes us as being especially good; in fact, the writer of this review has decided to introduce it into his own school. We feel compelled to add a word of commendation to the publishers, who have produced the books in a most pleasant and serviceable form."

SPECIMENS AND PARTICULARS GRATIS.

GOOD MAPS AT LOW PRICES.

THE VIADUCT SERIES

OF

SCHOOL WALL MAPS

ARE

BROUGHT UP TO DATE,
PRINTED IN PERMANENT COLOURS,
CLEARLY AND BOLDLY MARKED,
STRONGLY MOUNTED,

with the result that they have been adopted by all those Principals in need of a

RELIABLE MAP AT A LOW PRICE.

The Series consists of

THE WORLD IN HEMISPHERES:—

Europe.	**N. America.**	**England.**
Asia.	**S. America.**	**Scotland.**
Africa.	**United States.**	**Ireland.**

Size 46 in. by 39 in., mounted on Linen, Roller, and Varnished.

Published Price, 7s. 6d. each.

A Specimen portion of a Map will be sent gratis on application.

JACKSON'S
SYSTEM OF UPRIGHT PENMANSHIP.
FOR ONE OR BOTH HANDS.

LATEST INSPECTOR'S REPORT.

COLONIAL BLUE BOOK.

"Writing receives considerable attention, but I believe that greater progress would be made by using **Jackson's style of Upright Writing**. Many of the English Inspectors of Schools have commented most favourably on its rapidity and usefulness. One says: 'Vertical writing is exact, definite, and reliable, whilst sloping writing is ambiguous, delusive, and untrustworthy. Vertical writing is vigorous and stimulating, as opposed to the enervating and vacillating character of all slanting penmanship. It is consistent with itself, and absolutely scientific.' Another Inspector says: 'The vertical penmanship is the one that children take to most naturally, and under which they make the best progress. Of its superior legibility as compared with ordinary sloped writing there is no room for two opinions. In writing in this style the pupils can sit straight up, with the spines and head erect, and the eyes looking straight at the sheet, an advantage of great importance for the physical well-being of the scholars. In one of our largest schools the upright style of writing was introduced about seven months before the examination. The result was an improvement I had not anticipated; indeed, the school was classed at once among the best in writing, though this subject had not been previously one of its strong points. At some schools the uniformity in the handwriting is so remarkable that to the eyes of casual observers the papers in dictation would appear to have been written by one scholar. The **Jackson System of Handwriting** is perfect. It is certain to be the writing of the future. There is hardly any effort to write, and, besides being legible, it does not cramp the hand. It is highly recommended, both on common-sense and hygienic grounds. Children will readily learn it, and it is fastest and most natural.'"

EXAMPLES IN ALGEBRA.

By **C. O. TUCKEY, M.A.**, Assistant Master at Charterhouse, late Scholar of Trinity College, Cambridge.

"This is a very good collection and may be recommended without reservation."—*Nature.*

"The selection of examples and the order of the chapters undoubtedly place the book far in advance of any at present existing."—*Guardian.*

Crown 8vo, with or without Answers, 1s. 6d.

Examples in Practical Geometry and Mensuration.

By **J. W. MARSHALL, M.A.**, and **C. O. TUCKEY, M.A.**, Assistant Masters at Charterhouse.

"One is almost inclined to think that a good collection of examples like this is better to put into the hands of the class than any text-book. The good teacher will supply the text as it is wanted."—*Preparatory School Review.*

In Two Parts. With Numerous Illustrations. Crown 8vo, 1s. 6d. each.

BELL'S FRENCH COURSE.

By **PERCY ATHERTON, M.A.**, Assistant Master at Haileybury College.

"The lessons are thoroughly progressive and exceedingly intelligent in their points. The selections for reading exercises are well chosen, and the lessons in grammar not only complete the book but help towards its value as a teaching medium. In every sense the volume is a success, and we look forward with pleasure to the second course. The printing, illustrations, and general appearance of the book will make it popular among young students."—*Practical Teacher.*

"Well suited to help a teacher to combine the old and the new methods—drill in grammar and fluency of speech."—*Times.*

For Oxford Local, 1904. Just Published.

LUCIAN.—VERA HISTORIA.

Edited by R. E. YATES, B.A., Classical Scholar of Exeter College, Oxford. With Introduction, Notes, and Vocabulary. With numerous Illustrations. 1s. 6d.

(*Bell's Illustrated Classics.*)

For Cambridge Local, 1904. Just Published.

CAESAR.—DE BELLO GALLICO.

Books IV. and V.

Edited, with Introduction, Notes, and Vocabulary, by the Rev. A. W. UPCOTT, M.A., Head Master of Christ's Hospital, and A. REYNOLDS, M.A., Assistant Master at Merchant Taylors' School. With numerous Illustrations. 2s. 6d. (*Bell's Illustrated Classics.*)

MACMILLAN & CO.'S LIST.

New Works on Geometry to meet the New Requirements.

A SCHOOL GEOMETRY.

By H. S. HALL, M.A., and F. H. STEVENS, M.A. Globe 8vo.

PARTS I. and II. PART I. Lines and Angles, Rectilineal Figures. PART II. Areas of Rectilineal Figures (containing the substance of Euclid, Book I.). 1s. 6d.
PART III.—Circles (containing the substance of Euclid, Book III., 1-34, and Part of Book IV.). 1s.
PARTS I., II., and III. 2s. 6d.
PART IV.—Squares and Rectangles, Geometrical Equivalents of certain Algebraical Formulæ (containing the substance of Euclid, Book II. and Book III., Props. 35-37). Sewed, 6d.
PARTS III. and IV. 1s. 6d.
PARTS I.-IV. 3s.
PART V.—Containing the substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d.
PARTS I.-V.—4s. 6d.
PARTS IV. and V.—Containing the substance of Euclid, Book II., Book III., 35-37, and Book VI. 2s.
PART VI.—Containing the substance of Euclid, Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures.
[*Shortly.* [*In preparation.*

*** This Work is based upon the recommendations of the Mathematical Association.

JOURNAL OF EDUCATION.—"Seems quite the best of the new text-books of geometry that have lately been published. It is moderate in its changes, and excellent as to arrangement and selection."

A NEW GEOMETRY FOR SCHOOLS.

By S. BARNARD, M.A., Assistant Master at Rugby School, late Fellow and Lecturer at Emmanuel College, Cambridge, and J. M. CHILD, B.A. (Cantab.), Lecturer in Mathematics, Technical College, Derby. Crown 8vo, 4s. 6d.

NATURE.—"There is no doubt that in this work of Messrs. Barnard and Child the teacher will find every requisite for the modern teaching of geometry, including a very large number of illustrative examples."

A NEW GEOMETRY FOR JUNIOR FORMS.

By S. BARNARD, M.A., and J. M. CHILD, B.A. (Cantab.). Crown 8vo, 2s. 6d.

*** This Volume contains all the Practical and Theoretical Geometry required for a Pass by Junior Candidates in the University Locals.

THEORETICAL GEOMETRY FOR BEGINNERS.

By C. H. ALLCOCK, Senior Mathematical Master at Eton. PARTS I., II., and III., Globe 8vo, 1s. 6d. each. PART IV. [*In prep.*

SCHOOL WORLD.—"To those teachers who prefer a modified Euclid to text-books which are frankly revolutionary this book will be very acceptable. Undoubtedly Mr. Allcock has succeeded in retaining the good features of the 'Elements,' while removing most of those which make Euclid's work most distasteful to the schoolboy."

PRACTICAL EXERCISES IN GEOMETRY.

By W. D. EGGAR, M.A., Assistant Master at Eton College. 2s. 6d.

MATHEMATICAL GAZETTE.—"We welcome heartily Mr. Eggar's book as one that should supply a widely-felt want. . . . The book is well got up: the figures are effectively drawn on an ample scale. We see everywhere signs of a teacher whose heart is in his work."

CAMBRIDGE UNIVERSITY PRESS.

ELEMENTARY GEOMETRY, PRACTICAL AND THEORETICAL.

By C. GODFREY, M.A., Senior Mathematical Master at Winchester College, and
A. W. SIDDONS, M.A., Fellow of Jesus College, Cambridge, Assistant Master at Harrow School.

Large crown 8vo, pages xii + 356.

(1) Complete in One Volume, price 3s. 6d.
Or (2) in Two Volumes, Vol. I. (Experimental Course, and Books I. and II.), 2s.; Vol. II. (Books III. and IV.), 2s.
Or (3) in Five Parts: Part I. (Experimental Geometry), 1s.; Part II. (Theoretical Geometry, Book I.), 1s.; Part III. (Book II.), 1s.; Part IV. (Book III.), 1s.; Part V. (Book IV.), 1s.

ANSWERS TO THE EXAMPLES, price 4d., post free.

A Key is in preparation.

Guardian.—"A most admirable text-book for the beginner. . . . . The experimental part, which occupies the first sixty pages, is of the simplest character, and makes no attempt at the more elaborate treatment of the other. In the theoretical part the treatment is eminently satisfactory. The book has every claim to a wide recognition."

A HISTORY OF CLASSICAL SCHOLARSHIP. From the Sixth Century B.C. to the End of the Middle Ages. With Chronological Tables, Facsimiles from Manuscripts, and other Illustrations. By JOHN EDWIN SANDYS, Litt.D., Fellow and Lecturer of St. John's College, and Public Orator in the University of Cambridge. Large crown 8vo, 10s. 6d. net.

Spectator.—"As a work of reference his book is of the highest value. The fact that there is no book of a similar character in English, together with the exactitude and extent of the information it contains, makes it indispensable to all interested in scholarship."

PROLEGOMENA TO THE STUDY OF GREEK RELIGION. By JANE ELLEN HARRISON, Fellow and Lecturer of Newnham College, Cambridge, Hon. LL.D. (Aberdeen), Hon. D.Litt. (Durham). Demy 8vo, 15s. net.

DEMOSTHENES.—ON THE CROWN.—Edited by WILLIAM WATSON GOODWIN, Hon. LL.D. and D.C.L., Eliot Professor of Greek Literature (Emeritus) in Harvard University. School Edition. Crown 8vo, 6s.

SOPHOCLES.—ŒDIPUS COLONEUS. With a Commentary. Abridged from the Large Edition of Sir RICHARD C. JEBB, by E. S. SHUCKBURGH, Litt.D., late Fellow and Assistant Tutor of Emmanuel College, Cambridge. Crown 8vo, 4s.

COMPOSITIONS AND TRANSLATIONS. By the late HENRY CHARLES FINCH MASON, sometime Scholar of Trinity College and Bell Scholar in the University of Cambridge, Porson Prizeman and Sir William Browne's Medallist (1878), Assistant Master in Haileybury College, 1883-1902. With Prefatory Memoir by R. C. GILSON, Trinity College, Cambridge, Head Master of King Edward VI.'s School, Birmingham. Edited by H. H. WEST, formerly of Trinity College, Cambridge. Crown 8vo, 3s. 6d. net.

A BOOK OF ENGLISH POETRY FOR THE YOUNG. Arranged for Preparatory and Elementary Schools by W. H. WOODWARD, Professor of Education in the University of Liverpool. Extra fcap. 8vo, 2s. [*Immediately.*

A SECOND BOOK OF ENGLISH POETRY FOR THE YOUNG. Arranged for Secondary and High Schools. By W. H. WOODWARD, Professor of Education in the University of Liverpool. Extra fcap. 8vo, 2s. [*Immediately.*

ERASMUS OF ROTTERDAM RESPECTING THE AIM AND METHOD OF EDUCATION: a Study of Educational Doctrine in the period of the Renaissance. By W. H. WOODWARD. [*Nearly ready.*

A HANDBOOK OF MODERN ENGLISH METRE. By JOSEPH B. MAYOR, Hon. Fellow of St. John's College, Cambridge, Hon. Litt.D. of Dublin. Extra fcap. 8vo, 2s.

By the same Author.

CHAPTERS ON ENGLISH METRE. Second Edition, Revised and Enlarged. Demy 8vo, 7s. 6d. net.
Pilot.—"The work has long been recognized as of standard value."

By L. BOQUEL, Lecturer at Emmanuel and Newnham Colleges.

RANDOM EXERCISES IN FRENCH GRAMMAR. Homonyms and Synonyms. For Advanced Students. Crown 8vo, Second Edition, 3s. 6d.

KEY to the above. Crown 8vo, 10s. 6d. net.

THE STUDENT'S SHAKESPEARE.

Designed for Candidates preparing for the Higher Certificates, Senior Local, and similar Examinations.

THE TRAGEDY OF HAMLET. Edited by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge, 3s. [*Nearly ready.*

THE TRAGEDY OF MACBETH. Edited by A. W. VERITY, M.A. 2s. 6d.
Guardian.—"An edition of rare merit, suited to the highest study of the poem."
School World.—"A storehouse of learning, marvellously full and well arranged, and appears destined to provide quite a standard edition for the purposes of all higher examinations."

PITT PRESS SERIES.—New Volumes.

LOS LADRONES DE ASTURIAS. Being the First Fifteen chapters of "La Historia de Gil Blas de Santillana" as translated into Spanish by Josef Francisco Isla from the original French of Alain René Le Sage. Edited by F. A. KIRKPATRICK, M.A. 3s.

Subjects for Cambridge Local Examinations, December, 1904.

SCOTT.—KENILWORTH.—Edited, with Introduction and Notes, by J. H. FLATHER, M.A., Emmanuel College. 2s. 6d. [*Juniors and Seniors.*

THE STORY OF THE KINGS OF ROME. Edited by G. M. EDWARDS, M.A., Fellow and Tutor of Sidney Sussex College. 1s. 6d. [*Preliminary.*
Guardian.—"A useful and attractive book for early use. . . . This book contains much useful idiom, and is an excellent introduction to the legends of Rome."

LIVY.—BOOK VI. Edited, with Introduction and Notes, by F. H. MARSHALL, B.A., Fellow of Emmanuel College. 2s. 6d. [*Seniors.*
Guardian.—"An excellent edition for use in higher forms."

KOHLRAUSCH.—DAS JAHR 1813. Edited by J. W. CARTMELL, M.A., Fellow and Tutor of Christ's College. 2s. [*Seniors.*

THE REVISED VERSION.—SCHOOL EDITION.

THE GOSPEL ACCORDING TO ST. MATTHEW. The Revised Version. Edited, with Notes, for the use of Schools, by the Rev. A. CARR, M.A. With Three Maps. 1s. 6d. net.
School World.—"The most approved results of recent Biblical criticism are embodied in the splendid notes; but, independent of its intrinsic value, there are three artistic maps incorporated in the text. An edition as remarkable for its elegance as for its high utility."

THE GOSPEL ACCORDING TO ST. MARK. Revised Version. Edited by Sir A. F. HORT, Bart., M.A., and Mrs. MARY CHITTY. 1s. 6d. net.
(Annotated Editions of the Revised Version of St. Luke, St. John, and the Acts of the Apostles are in preparation.)

A SHORT HISTORY OF THE HEBREWS TO THE ROMAN PERIOD. By R. L. OTTLEY, M.A., Canon of Christ Church and Regius Professor of Pastoral Theology in the University of Oxford. Crown 8vo, with 7 Maps, 5s.
Spectator.—"Mr. Ottley faces with courage the critical problem as it concerns Old Testament History. . . . On the whole, Mr. Ottley's book will be found a sober and cautious effort to accommodate the old and the new. Something of the kind is absolutely necessary, and we are thankful for an honest and devout effort to supply the want."

A SHORT HISTORY OF THE GREEKS FROM THE EARLIEST TIMES TO B.C. 146. By E. S. SHUCKBURGH, Litt.D., Crown 8vo, with Illustrations and Maps, 4s. 6d.
Times.—"Clear, scholarly, and readable."
School World.—"Mr. Shuckburgh's work is sound, scholarly, and interesting."
Academy.—"Mr. Shuckburgh's work is worthy of his reputation."

NOW READY. No. 1. **THE CAMBRIDGE UNIVERSITY PRESS BULLETIN.** Containing Notes on Books published by the Cambridge University Press. *The Bulletin* will usually be published early in each University Term, and will be posted free of charge to any address.

London: C. J. CLAY & SONS, Cambridge University Press Warehouse, Ave Maria Lane.

CLASS LIST

OF CANDIDATES WHO HAVE PASSED THE CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS.—CHRISTMAS, 1903.

The list of successful candidates at the Colonial and Foreign Centres will be published in the March number of "The Educational Times."

[*Throughout the following List, bracketing of names implies equality.*]

PRIZES.

General Proficiency.

FIRST CLASS [or SENIOR].

1. Dukes, Miss I. C. (*Isbister Prize.*) — Miss Conder, Milton Mount College, Gravesend.
2. Coombes, C. S. (*Pinches Prize.*) — Mr. Rider, Devonport High School, Stoke.
3. Wheater, S. — Mr. Wheater, Grammar School, Albemarle Crescent, Scarborough.
4. Mercer, R. — Mr. Oakes, Oakes Institute, Walton, Liverpool.

SECOND CLASS [or JUNIOR].

1. Killingback, W. J. — Mr. Clark, Grammar School, Ongar.
2. Barnes, H. — Mr. Hanna, Argyle House School, Sunderland.
3. Purry, W. B. — Rev. J. Turner, Southdown College, Eastbourne.
4. Wynn, H. E. — Rev. Dr. Scott, Mercers' School, Holborn, E.C.

THIRD CLASS.

1. Gibbs, Miss D. — Miss Anstey, Gavine House School, Portsmouth.
2. Leake, Miss S. K. — Private tuition.
3. Gronan, H. E. — Mr. Oakes, Oakes Institute, Walton, Liverpool.
4. Lessels, T. H. W. — Mr. Pratt, New Benwell Council School, Benwell-on-Tyne.

English Subjects.

1. Dukes, Miss I. C. — Miss Conder, Milton Mount College, Gravesend.
2. Howl, Miss F. M. — Mrs. Hiatt, Ladies' College, Wellington, Salop.

Mathematics.

1. Coombes, C. S. — Mr. Rider, Devonport High School, Stoke.
2. Mercer, R. — Mr. Oakes, Oakes Institute, Walton, Liverpool.

Modern Foreign Languages.

1. Tintore, L. — Rev. Brother Attale, St. Joseph's College, Denmark Hill, S.E.
2. Dukes, Miss I. C. — Miss Conder, Milton Mount College, Gravesend.

Classics.

1. Mackwood, J. C. — Rev. Dr. Rendall, Charterhouse School, Godalming.
2. [Not awarded.]

*Natural Sciences.**

1. Mercer, R. — Mr. Oakes, Oakes Institute, Walton, Liverpool.
2. Hampson, R. E. V. — Mr. Hampson, Commercial College, Southport.

Taylor-Jones Prize for Scripture History.

Dukes, Miss I. C. — Miss Conder, Milton Mount College, Gravesend.

Pitman Medals for Shorthand.

1. Wheater, S. (*Silver Medal.*) — Mr. Wheater, Grammar School, Albemarle Crescent, Scarborough.
2. Hogg, R. R. (*Bronze Medal.*) — Mr. Dawes, Bridgnorth Grammar School.

* G. E. Bairsto, Oakes Institute, Walton, Liverpool, was disqualified for the Second Prize for Natural Sciences in consequence of having obtained it at a previous Examination.

The following is a List of the Candidates who obtained the FIRST and SECOND PLACES in each Subject on FIRST CLASS PAPERS.

Scripture History.

1. Dukes, Miss I. C. — Miss Conder, Milton Mount College, Gravesend.
2. Read, Miss E. M. — Miss Atkins, West Ham High School.
   Wheater, S. — Mr. Wheater, Grammar School, Albemarle Crescent, Scarborough.

English Language.

1. Read, Miss E. M. — Miss Atkins, West Ham High School.
2. Dukes, Miss I. C. — Miss Conder, Milton Mount College, Gravesend.
   Holland, C. F. — Private tuition.

English History.

1. Holland, C. F. — Private tuition.
2. Powicke, Miss G. M. — Miss Conder, Milton Mount College, Gravesend.

Geography.

1. Thompson, J. P. — Mr. Yardley, Claughton Collegiate School, Birkenhead.
2. Wetherall, M. L. — Mr. Skey, Cliftonville College, Margate.

Arithmetic.

1. Coombes, C. S. — Mr. Rider, Devonport High School, Stoke.
2. Fry, Miss B. D. — Miss Conder, Milton Mount College, Gravesend.
   Hogg, R. R. — Mr. Dawes, Bridgnorth Grammar School.

Algebra.

1. Read, Miss E. M. — Miss Atkins, West Ham High School.
2. Coombes, C. S. — Mr. Rider, Devonport High School, Stoke.
   Fitter, Miss L. E. — Miss Bowler, Pupil-Teachers' Central Classes, Birmingham.

Geometry.

1. Coombes, C. S. — Mr. Rider, Devonport High School, Stoke.
   Hosegood, P. E. — Mr. Hawe, The High School for Boys, Croydon.

Trigonometry.

1. Coombes, C. S. — Mr. Rider, Devonport High School, Stoke.
2. Deacon, S. — Mr. Hawe, The High School for Boys, Croydon.

Mechanics.

1. Mercer, R. — Mr. Oakes, Oakes Institute, Walton, Liverpool.
2. Dawkins, W. H. — Mr. Thurnham, Borden Grammar School.

Book-keeping.

1. Gaunt, O. — Mr. Gregory-Taylor, Grammar School, Shoreham.
2. Hall, L. E. — Mr. Hawe, The High School for Boys, Croydon.

Mensuration.

1. Bisson, W. G. — Messrs. Davey, Oxenford House, St. Lawrence, Jersey.
   Brown, J. G. — Mr. Slack, Commercial College, York.
   King, L. J. — Mr. Leetham, Northgate School, Winchester.
   Wheater, S. — Mr. Wheater, Grammar School, Albemarle Crescent, Scarborough.

French.

1. Richard, Miss R. M. J. — Private tuition.
2. Bisson, J. R. — Private tuition.
   Tintore, L. — Rev. Brother Attale, St. Joseph's College, Denmark Hill, S.E.

German.

1. Dukes, Miss I. C. — Miss Conder, Milton Mount College, Gravesend.
2. Aveling, Miss G. — Rev. F. W. Aveling, Christ's College, Blackheath.

Italian.

1. Forbes, V. W. — Mr. Thurnham, Borden Grammar School.
2. Jones, Miss M. V. — The Misses Kingston and Mrs. Maples, Church High School, Chepstow.

Spanish.

1. Tintore, L. — Rev. Brother Attale, St. Joseph's College, Denmark Hill, S.E.

Latin.

1. Dukes, Miss I. C. — Miss Conder, Milton Mount College, Gravesend.
2. Edkins, F. J. — Rev. Dr. Scott, Mercers' School, Holborn, E.C.
   Firth, O. W. — Private tuition.

Greek.

1. Mackwood, J. C. — Rev. Dr. Rendall, Charterhouse School, Godalming.
2. Holmes, J. B. — Private tuition.

Hebrew.

1. Jacobi, J. — Mr. Wagstaff, Central Foundation School, Cowper Street, E.C.

Sound, Light, and Heat.

1. Bairsto, G. E. — Mr. Oakes, Oakes Institute, Walton, Liverpool.
2. Ackroyd, A. — Dr. Latham, Thornton Grammar School, Bradford.
   Mercer, R. — Mr. Oakes, Oakes Institute, Walton, Liverpool.

Magnetism and Electricity.

1. Aviss, D. — Mr. Thurnham, Borden Grammar School.
   Dawkins, W. H. — Mr. Thurnham, Borden Grammar School.

Chemistry.

1. Mercer, R. — Mr. Oakes, Oakes Institute, Walton, Liverpool.
2. Beresford, G. W. — Private tuition.
   Vulliamy, B. L. — Private tuition.

Natural History.

1. Comer, Miss W. K. — The Misses Harrington and Miss Boobbyer, Lonsdale House School, Norwich.
2. Sandbrook, Miss O. B. — Mrs. Lawrence, Sunfield House School, Wellington, Salop.

Drawing.

1. Evans, H. A. — Private tuition.
2. Liss, J. W. — Mr. Husband, Bradley High School, Newton Abbot.
   Makin, G. — Mr. Davenport, Kilgrimol School, St. Anne's-on-Sea.

Music.

1. Comer, Miss W. K. — The Misses Harrington and Miss Boobbyer, Lonsdale House School, Norwich.
2. Batty, Miss E. A. — Miss Conder, Milton Mount College, Gravesend.
   Curry, Miss C. M. — The Misses Comfort and Paine, Ladies' College, Seaford.

Political Economy.

1. Cram, Miss E. G. — Mrs. Yarrow, Ellerker College, Richmond.
2. Howl, Miss F. M. — Mrs. Hiatt, Ladies' College, Wellington, Salop.

Shorthand.

1. Wheater, S. — Mr. Wheater, Grammar School, Albemarle Crescent, Scarborough.
2. Hogg, R. R. — Mr. Dawes, Bridgnorth Grammar School.

Domestic Economy.

1. Parks, Miss C. C. — Miss Hanna, West Cornwall College, Penzance.
2. Weever, Miss F. — Miss Sutton, South Croydon College.

CLASS LIST — BOYS.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively :—

a. = Arithmetic.
al. = Algebra.
b. = Botany.
bk. = Bookkeeping.
ch. = Chemistry.
d. = Drawing.
do. = Domestic Economy.
e. = English.
f. = French.
g. = Geography.
ge. = German.
geo. = Geology.
gm. = Geometry.
gr. = Greek.
h. = History.
he. = Hebrew
i. = Italian.
l. = Latin.
m. = Mechanics.
ma. = Magnetism & Electricity.
ms. = Mensuration.
mu. = Music.
nh. = Natural History.
p. = Political Economy.
ph. = Physiology.
phys. = Elementary Physics.
s. = Scripture.
sc. = Elementary Science.
sd. = Sound, Light, and Heat.
sh. = Shorthand.
sp. = Spanish.
tr. = Trigonometry.
z. = Zoology.

The small figures [1] and [2] prefixed to names in the Second and Third Class Lists denote that the Candidates were entered for the First and Second Classes respectively.

In the addresses, Acad. = Academy, C. or Coll. = College, Coll. S. = Collegiate School, Comm. = Commercial, End. = Endowed, Found. = Foundation, H. = House, Inst. = Institute, Int. = International, Inter. = Intermediate, Prep. = Preparatory, S. = School, Tech. = Technical, Univ. = University.

FIRST CLASS [or SENIOR].

Honours Division.

Coombes, C.S. *a.al.gm.ch.sh.* Devonport High S., Stoke
Wheater, S. *s.e.h.bk.ms.sh.* Gram. S., Scarborough

PROFESSOR MEIKLEJOHN'S SERIES.

JUST PUBLISHED. Crown 8vo. 60 pp. Price **9d.**

A FIRST BOOK OF GEOMETRY.

Being an Introduction to Theoretical and Practical Geometry. By W. AHRENS, M.A. (Lond.), and J. D. PAUL B.A. (Cantab.), Assistant Masters at the County School, Bedford.

"The small price of the Primer and the excellence of its contents seem likely to cause it to find favour with those teachers who prefer that even the lowest classes should have a text-book to guide their efforts. . . . **To such it can be heartily recommended."—The Mathematical Gazette.**

Second Edition. 410 pp. Price **2s. 6d.**

A SCHOOL GEOGRAPHY.

With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B A., F.R.G.S.

Second Edition. 478 pp. Price **2s. 6d.**

A SCHOOL HISTORY OF ENGLAND.

By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A.

A Short Geography. With the Commercial Highways of the World. **Twenty-third Edition** (1904). Crown 8vo, 196 pp. ... ... **1s.**

"This shilling Geography is exactly what a School Geography needs to be."—**The Teachers' Aid.**

"Clearness and conciseness exemplified."—**The Private Schoolmaster.**

A Short History of England and Great Britain. B.C. 55 to A.D. 1890. **Seventeenth Edition.** Crown 8vo ... ... **1s.**

A Large Type Edition of this book is issued at **1s. 6d.**

A Short Grammar of the English Tongue. With Three Hundred and Thirty Exercises. **Fifteenth Edition** ... ... **1s.**

This little book is written in the clearest and simplest style for Beginners.

One Hundred Short Essays in Outline. By Professor MEIKLEJOHN. **Sixth Edition.** 110 pp. ... **1s.**

"This is undoubtedly one of the most useful books for pupil-teachers, Scholarship and Certificate students, ever produced."—**The Practical Teacher.**

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.

JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Telegrams—"Educatorio, London."

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal—Miss STANSFELD

(Vice-President of the Ling Association of Gymnastic Teachers, Teacher of Gymnastics in the Cambridge Teachers' College, Froebel Educational Institute, Bedford Kindergarten College, Bedford High School, &c.).

THE object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Fencing, Lacrosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer.

There is an increasing demand for Teachers thoroughly trained on this system.

For Prospectus apply—37 Lansdowne Road, Bedford.

THE ANSTEY PHYSICAL TRAINING COLLEGE FOR WOMEN TEACHERS

PROVIDES a full course of instruction in Swedish Educational Gymnastics, Medical Gymnastics, and Massage, the aim being to send out trained Teachers with increased health and bodily vigour, mental strength, and moral power; to spread a knowledge of Physiology and the Laws of Health; to teach Gymnastics, Outdoor Games, Dancing, Swimming, and other forms of Physical Exercise in Schools and Colleges; to treat cases of Spinal Curvature, and many ailments which can be cured by scientific movements.

This is a most attractive vocation for educated women, and there are plenty of good openings for those trained at this College.

Students are almost always engaged before finishing the course.

For further particulars apply to the Principal, Miss ANSTEY, The Leasowes, near Halesowen, Worcestershire.

ROYAL HOLLOWAY COLLEGE

FOR WOMEN.

(UNIVERSITY OF LONDON.)

BLACKIE'S WARWICK SHAKESPEARE

General Editor—Prof. C. H. Herford, Litt.D.

The Warwick Shakespeare is in use in the following Schools, Colleges, and Universities, among many others:—

Eton College.
Harrow School.
St. Paul's School.
Rugby School.
King's College.
Clifton College.
Merchant Taylors' School.
City of London School.
The Charterhouse.
Newnham College.
Girton College.
Marlborough College.
Rossall School.
Malvern College.
Winchester College.
Shrewsbury School.
Wellington College.
Liverpool College.
Dulwich College.
Stonyhurst College.
Haileybury College.
Reading School.
Repton School.
Bradford Grammar School.
Bedford Grammar School.
Nottingham High School.
Oxford High School.
Hulme Grammar School.
Hymers College, Hull.
Dean Close School.
Dover College.
Bradfield College.
Radley College.
King Ed. School, Birmingham.
Mercers' School, London.
King Henry School, Coventry.
St. Edward's School, Oxford.
Great Crosby School.
Abingdon School.
Carlisle Grammar School.
Emanuel College, London.
Christ's College, Brecon.
North-Eastern County School.
St. Dunstan's College, London.
Westfield College.
North London Collegiate School for Girls.
Eaton Square High School for Girls.
Bedford College, London.
Queen's College, London.
High School for Girls, York.
Macclesfield High School.
Winchester High School.
University College, Cardiff.
University College, Aberystwyth.
University College, Bristol.
University of St. Andrews.
University of Sydney.
Maritzburg College, Natal.
Queen's College, Hong Kong.
Grey Institute, Port Elizabeth.
Marist College, Johannesburg.
Univ. of Otago, N.Z.
South African College.
Imperial Institute, Tokio.
&c. &c. &c.

The Warwick Shakespeare now contains 18 of the Greater Plays, edited in a literary spirit for Higher Forms and University Candidates. Price ***1s. 6d.*** per volume. Full particulars on application.

BLACKIE & SON'S LIST

All who are interested in the application of the newest educational ideas to School Books should consult Messrs. BLACKIE & SON'S Catalogues. These contain a number of books in all subjects specially written to meet modern requirements.

SERIES TO NOTE

Blackie's Illustrated Latin and Greek Series.
General Editor: Prof. R. Y. TYRRELL, Litt.D.

Blackie's New Geometries.
Produced on the lines as laid down by the Cambridge Syllabus and the Recommendations of the Mathematical Association.

Blackie's English Dictionaries.
The Imperial English Dictionary (4 vols., £4 net); The Student's English Dictionary (7s. 6d.); The Concise English Dictionary (3s. 6d.); Blackie's Standard Shilling Dictionary (1s.).

Blackie's Little French Classics. (*Price 4d.*)
Representing all important Authors from Rabelais to Daudet.

Blackie's Little German Classics. (*Price 6d.*)
Similar in scope and arrangement to the "Little French Classics."

Blackie's English Classics. (*Prices 1s. to 2s.*)
The works of the leading English Authors (35 vols.), annotated for School use. *Latest Issues.*—Faery Queene I., 2s.; Kingsley's Heroes, 1s.; Kenilworth, 2s.

BLACKIE & SON, Ltd., 50 Old Bailey, London, E.C.

THÉOPHILE GAUTIER. VOYAGE EN ITALIE. With Introduction and Notes by DE V. PAYEN-PAYNE. 3s.

THE STUDENT'S SHAKESPEARE.

Designed for Candidates preparing for the Higher Certificates, Senior Local, and similar Examinations.

THE TRAGEDY OF HAMLET. Edited, for the use of Students, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. Fcap. 8vo. 3s.

Pall Mall Gazette.—"It is not often that one can be forced into enthusiasm by a text-book, but we have here a perfect example of the manner in which Shakespeare should be read and studied."

THE TRAGEDY OF MACBETH. Edited by A. W. VERITY, M.A. Fcap. 8vo, 2s. 6d.

Guardian.—"An edition of rare merit, suited to the highest study of the poem."
School World.—"A storehouse of learning, marvellously full and well arranged, and appears destined to provide quite a standard edition for the purposes of all higher examinations."

THE CAMBRIDGE BIOLOGICAL SERIES.

General Editor: ARTHUR E. SHIPLEY, M.A., Fellow and Tutor of Christ's College, Cambridge.

A MANUAL AND DICTIONARY OF THE FLOWERING PLANTS AND FERNS. By J. C. WILLIS, M.A., Director of the Royal Botanic Gardens, Ceylon. Second Edition, Revised and Rearranged. In one Volume, crown 8vo, 10s. 6d.

THE CAMBRIDGE PHYSICAL SERIES.

CONDUCTION OF ELECTRICITY THROUGH GASES. By J. J. THOMSON, D.Sc., LL.D., Ph.D., F.R.S., Fellow of Trinity College, Cambridge; Cavendish Professor of Experimental Physics, Cambridge. Demy 8vo, 16s.

Times.—"The physicist sees the relations between electricity and matter laid bare in a manner hardly hoped for hitherto. Radium and the property of radio-activity presented him with a most abstruse and intricate problem, and, largely owing to the assistance derived from these researches, that problem is now completely solved. . . . The views in this book are based on cunningly devised experiments striking at the root of problems often asked and almost as often dismissed as unanswerable. As much by the aid of a perfect mastery over the properties of materials as by the sheer intellectual power of abstract reasoning, some of these fundamental problems of the constitution of matter are here presented as on the verge of solution."

A SHORT HISTORY OF THE HEBREWS TO THE ROMAN PERIOD. By R. L. OTTLEY, M.A., Canon of Christ Church and Regius Professor of Pastoral Theology in the University of Oxford. Crown 8vo, with 7 Maps, 5s.

Journal of Education.—"It marks an immense advance in the popular treatment of the Bible history; and teachers and students alike will find it a most valuable aid."

THE PRAYER-BOOK EXPLAINED. By the Rev. PERCIVAL JACKSON, M.A., Jesus College, Cambridge.

Part I. The Daily Offices and the Litany. 2s. 6d. [*Now ready.*
Part II. The Holy Communion and the Occasional Offices. [*In preparation.*

Church Times.—"We do not know of a more thoughtful and learned aid to the intelligent use of each detail in Matins and Evensong and in the Litany than the author has so adroitly and pleasantly managed to compress within so handy a form and in so popular a manner. For clergy and laity alike, it will serve as a really fresh and illuminating companion to the Daily Offices."

THE CHURCH CATECHISM EXPLAINED. By the Rev. A. W. ROBINSON, B.D., Warden of the Mission College of All-hallows, Barking, E.C., and Examining Chaplain to the Bishop of Wakefield. Fifth Impression. Fcap. 8vo, 2s.

Record.—"A really useful manual."
Church Times.—"An admirable work, both as to the matter and its arrangement."

Six or more copies of the two following books for class use can be supplied at Half the published prices, and may be ordered through any Bookseller.

GOSPEL HISTORY OF OUR LORD JESUS CHRIST in the Language of the Revised Version, arranged in a Connected Narrative, especially for the use of Teachers and Preachers. By Rev. C. C. JAMES, M.A., Rector of Wortham, Suffolk, and late Fellow of King's College. Second Edition. Crown 8vo, 3s. 6d.

A HARMONY OF THE GOSPELS in the Words of the Revised Version. With copious References, Tables, &c. Arranged by Rev. C. C. JAMES, M.A. Second Edition. Crown 8vo, 5s.

A SHORT HISTORY OF THE GREEKS FROM THE EARLIEST TIMES TO B.C. 146. By E. S. SHUCKBURGH, Litt.D., late Fellow of Emmanuel College, Cambridge; Author of "A Translation of Polybius," &c. With Illustrations and Maps. Crown 8vo, 4s. 6d.

Times.—"Clear, scholarly, and readable."
School World.—"Mr. Shuckburgh's work is sound, scholarly, and interesting."

GRADUATED PASSAGES FROM GREEK AND LATIN AUTHORS FOR FIRST-SIGHT TRANSLATION. Selected and supplied with short Notes for Beginners by H. BENDALL, M.A., and C. E. LAURENCE, B.A., Assistant Master of Blackheath Proprietary School. Crown 8vo.

Part I.—Easy. 1s. 6d. Part II.—Moderately Easy. 2s.
Part III.—Moderately Difficult. 2s. Part IV.—Difficult. 2s.

By L. BOQUEL, Lecturer at Emmanuel and Newnham Colleges.

RANDOM EXERCISES IN FRENCH GRAMMAR. Homonyms and Synonyms for Advanced Students. Second Edition. Crown 8vo, 3s. 6d.

Key to the above. Crown 8vo, 10s. 6d. net.

EXERCISES IN FRENCH COMPOSITION. For Advanced Students. New Edition. Demy 8vo, 3s. 6d.

A PRIMER OF FRENCH VERSE FOR UPPER FORMS. Edited by FREDERIC SPENCER, Rector of the High School, Glasgow. 3s.

School World.—"Teachers owe a debt of gratitude to Prof. Spencer for this attractive volume. . . . . It is a very good book."
Guardian.—"Simplicity and freshness characterize the whole of the work, and Mr. Spencer may be congratulated upon having made a really valuable contribution to the list of French school-books."

The Educational Times.

London Education.

On the 1st of May the Education Act (London), 1903, will come into operation, and there is no indication of any wish on the part of Londoners to postpone the date. On the 5th of this month the elections will be held which determine into whose hands the administration of the new Act shall be committed, and to judge from the addresses of candidates now before us there is little doubt that the present election will turn mainly on education.

With Progressives or anti-Progressives, Anglicans or Passive Resisters, we are not concerned, but while standing aside from the party fray we may take the opportunity of discussing the Act simply from an educationist's point of view: without approving or disapproving it we may indicate what are its possibilities and how it may be turned to the best account.

As to the possibilities we cannot do better than refer our readers to a recently published volume on "London Education" by Mr. Sidney Webb (Longmans). Mr. Webb is an enthusiast, a dreamer of dreams, and his picture of London as it might be may seem to some to be modelled rather on Sir Walter Besant's "Palace of Delight" than on an Act of Parliament. But Mr. Webb is likewise a practical administrator, and there is nothing in his Utopia that might not even in this generation be realized if only Londoners were once convinced that the provision of education in all its grades concerns them no less than the supply of gas and water.

The first point to be noticed is that the London County Council as the Local Authority will take all education for its province. We may think that the London School Board might have been reconstructed and modified so as to fulfil these superadded functions, or we may think that an *ad hoc* body should have been constituted for the purpose; but we shall all agree on the vast possibilities that are opened out by the enlarged sphere. There is no more danger of Cockerton judgments, of starved and stinted voluntary schools (London will not be inclined to follow the policy of Wales), of conflicting interests and cross purposes between School Board teachers and the Technical Education Board.

But we may pay too dearly for centralization, and the most serious opposition to the London Act has come from those who have doubted whether the London County Council, with its present numbers, can efficiently undertake so vast a task in addition to all its present duties. It is reassuring to find that so competent an authority as Mr. Webb has no hesitation as to its ability. *Le mot de l'énigme* is devolution of authority. With the particulars of Mr. Webb's scheme for the formation of Local Education Committees in each of the twenty-nine boroughs, with Committees of Managers under them, we are not now concerned. It would be easy to pick holes in it, but we may unreservedly adopt the underlying principle as sound —that the main business of the Central Authority should be the supply and co-ordination of elementary and higher education, while the work of administration (under their direction and control) should be left to the local bodies.

With elementary education the problem is comparatively simple. The County Council will have ready to its hand machinery in perfect working order, and the inclusion of some thousand denominational schools, if at first it increases the work, will in the end, by removing friction and overlapping, reduce expenditure and increase the output. As to the supposed religious difficulty we would again ask our readers to consult Mr. Webb. In his final chapter he shows conclusively that the grievances of Nonconformists (with which he partly sympathizes) are lessened rather than aggravated by the Act; that financially the London ratepayer will actually benefit by the transference of voluntary schools; and, lastly, that as a mere matter of policy the opponents of concurrent endowment had far better bide their time and give the Act a fair trial.

But it is in relation to secondary education that the Act is a new departure, and here we cannot without reserve accept Mr. Webb as a safe guide. To start with, he apparently accepts the present condition of London secondary schools as satisfactory: "The department of secondary education is not one which will give the London County Council any serious trouble." Again: "London has to-day certainly not less than twenty-five thousand boys and girls between seven and nineteen in its secondary schools, actually a larger number than either Paris or Berlin." If we add the necessary qualification, "whereas it ought in proportion to its population to have twice or thrice the number," the statement

Digitized by Google

will bear a very different complexion. One of the most perplexing factors of the new problem that faces us is the relation of the County Council to private schools. On this topic Mr. Webb's remarks are not illuminating, and somewhat supercilious. There are, he tells us, in the background, over and above the public schools, in varying quality, the private "commercial academies" and "colleges for young ladies" of the genteel suburbs. "To them is left the opportunity of justifying their existence by catering for special needs and supplying a desirable elasticity to the rigidity of any public system." And that is all the comfort and counsel that Mr. Webb has to give to the private teacher! What would the bakers say if they were told: "The State has determined to set up bakeries where the public can be sure of obtaining wholesome bread at half the cost price; you can still justify your existence by providing fancy breads for those who like such delicacies"?

One point that we have often urged before, but it cannot be too often repeated, is that before any thorough and lasting organization of secondary education can be initiated there must be a preliminary survey and census. At present any calculation of the number of secondary-school teachers and scholars in London is pure guesswork. In the instructive chart produced a year or two ago by the Incorporated Association of Head Masters there are big blanks corresponding to the elephants in old maps of Africa. Doubtless these are partly occupied by efficient private schools which could not be brought under Mr. Webb's category of "fancy articles"; but, if this is so, we contend that they must be taken into account by the County Council, not left to fight their own battle against superior odds, but rather recognized, supported, and, if necessary—with proper guarantees for efficiency—subsidized.

We hope in a future number to deal with London University Education, the subject of the most original and stimulating chapter in Mr. Webb's volume, and far too large to be despatched at the fag end of an article.

NOTES.

Prof. Sanday has felt and obeyed a "call" to put in "a word for peace" in present educational troubles, for he "has no dearer wish at his heart than to see English Christians working together harmoniously." In a pamphlet entitled "Justice in Education" (1s. net, Longmans) he states the case for the Church of England, sets forth what he thinks was in the minds of the framers of the Education Acts, and considers the scheme proposed by the Committee of the Free Church Council and the "Durham Concordat." Prof. Sanday lays special stress on "a very serious fallacy underlying a great portion of the arguments against the Education Acts": "the statement that the schools which have hitherto been denominational and supported in part by voluntary subscriptions are now henceforth 'maintained by the State.'" "They are not wholly, but only partially, so maintained." He cannot surrender the right of appointing head teachers; and yet he confesses that there is "an anomaly" here. He concludes with the hope that he has shown "that, even under the Acts as they are, the grievances of Nonconformists are not quite so great as some of them suppose, and that the part played by the Church has been neither so grasping nor so harmful as they have allowed themselves to believe"; and he submits "that the best course is to work the Acts honestly on the lines on which they were framed." It may be doubted, unfortunately, whether Prof. Sanday will carry conviction to the minds of his opponents.

Prof. Sadler, writing to our vigorous contemporary *Indian Education* (February), refers to Sir John Gorst's old declaration that "there exists in England a large proportion of the community which does not believe in the wisdom of the policy of educating the children of the country beyond a very elementary stage," and he indicates "the graver reasons" that explain such disbelief. He goes on, however, to say:

> But, at the most, they do not explain a fiftieth part of the inertia which still impedes educational progress in England. By far the most serious obstacles to educational improvements are class-selfishness, distrust of popular government, lack of imagination, the spirit of routine, ignorance of what education can do for a country and of what it is actually doing elsewhere, niggardliness, the desire to protect institutions which might be endangered by a great development of popular schools under public management, and the fear lest any serious growth of educational expenditure should leave too narrow a margin of the public income for the needs of the Army and Navy and other public services.

Prof. Sadler, however, expresses his conviction "that, cost what they may, measures for the improvement and great extension of educational opportunities have become vital to our national welfare." He wants a vigorous propaganda through the length and breadth of the country to impress this view. "There should be no resting until national education is as popular as the Royal Navy. And throughout the whole of our educational system, from top to bottom, there should be a strong current of national feeling and patriotic duty. All great educational revivals have been inspired by national enthusiasm."

Principal Faunthorpe, writing to the *Times* (January 25) on the Government Certificate, urged the Board of Education to "put down its foot and keep it there, complaints or no complaints, draw up its own syllabus, and insist upon it," adding that "thus the quality of the teachers will be commensurate to the money spent on their training." To Principal Griffiths, of Cardiff, such an appeal appears "a most discouraging incident"—a harking back to the "system which was considered adequate when there were no day training schools, when there were no University colleges, and when education as a science may be considered to have been non-existent." The Principal writes (*Times*, February 4):

> I would venture to suggest that the Board of Education should recognize the undoubted fact that regulations suitable for residential are not necessarily the best for the day training departments of University colleges. It might be possible to frame two distinct schemes, one applicable to those day training colleges which undertake to admit only matriculated students; the other to residential colleges. The former might be allowed the greater freedom. So long as the Board of Education insist upon a certain minimum standard, any resultant variety would be a good rather than an evil, and those colleges which preferred uniformity to variety, and control to liberty, might be placed within the bounds of the narrower scheme.

The increasing freedom of the past half generation should not be lightly checked or curtailed.

Mr. A. W. Pickard-Cambridge's examination of "The Claims of Classical Studies," in the *Independent Review* for February, will probably suffer attack from different points. He might well have taken for granted the educational value of classical studies, and devoted more attention to "the further question whether, under the systems at present in vogue, our public-school and University men are really put in the way of obtaining any such benefits as those which the study of the classics is capable of conferring," and on the yet further question how to make the most of classics in the special circumstances. The conclusion is:

The study of the classics has advantages which make it perhaps the best basis for the liberal education not only of the ablest scholars, but of all who have not a marked special bent in some other direction. But at present these advantages are being obscured and lost by the inefficiency of the teaching and learning of the subject in schools; by the defects of a number of examinations and courses of work; and by the lack of intellectual interest in schools and Universities, and in the country as a whole. Further, the study of the classics, even if thoroughly pursued in all its branches, will not alone make a man into an educated citizen of an imperial democracy in an age of rapid progress in scientific thought and on every side of life. . . . But, whatever means are adopted, if the classics are to be retained as the substratum of a liberal education, there must be a constantly fresh effort to adapt the study of them to the development of intelligence; a vast improvement in school teaching; a readiness to modify stereotyped methods, and to impart life and freshness to work which is always in danger of becoming hackneyed and stagnant; and a discarding of the study of all that is not of high and universal value in ancient civilization and literature, in order to make room for training in matters of greater moment to modern men.

The *School Journal* (New York, Chicago, and Boston) asks the rather fundamental question: "Must teachers live?" "Well, doctors must live, you know," said the physician to Sydney Smith. "I do not see the necessity," was the genial reply. The State cannot get on without teachers, and so teachers must live. But how? For some years the question of salaries has been agitated by various committees of State teachers' associations, trying "to draw the American people out of a similar indifference" to Sydney Smith's. Now Mr. A. H. Sage, of the Wisconsin State Normal School at Oshkosh, assisted by a committee, finds that 376 dols. a year for men, and 248 dols. a year for women, is the average income of country-school teachers in the State. "This," says the *School Journal*, "is not only less than that of other brain-workers, but is less than that of dirt-shovellers and of every kind of unskilled workmen in the State." These Wisconsin teachers "have charge of over 50 per cent. of the children of the State." Again, Mr. William McAndrew, Principal of the Girls' Technical High School, New York, says: "The average salary of men teachers in the United States is less than 322 dols. a year, and the average pay of women is less than 200 dols. a year"; and consequently "the American public does not encourage, and does not permit, a teacher to acquire respectable ability and skill." "That average of 270 dols. a year" he frankly calls "that standing disgrace to the richest country of the world." Superintendent W. E. Chancellor, Bloomfield, N.J., discusses the matter in the *School Journal's* columns for "the Professional and Financial Side" (which, by the way, are edited by Mr. McAndrew), and proposes a more comfortable scale (January 2): for principals of elementary schools, maximum 10,000 dols., minimum 5,000 dols.; for teachers in elementary schools, maximum 5,000 dols., minimum 1,600 dols. What will the National Association's Committee report? What says the Mosely Commission?

Mr. Mosely himself gives his opinion, crisp and emphatic, in the February number of the *World's Work*. "The most striking facts I have gathered," he says, are these:—

(1) That the people of the United States spend a marvellous amount of money on their public schools, endowing education more lavishly than any other people in the world. (2) They do not spend enough. The salaries to teachers are not sufficient for the service the country desires and should have.

The money lavished on the schools goes to buildings and equipment, which "are on a much more generous scale than in England," but the teachers—the living force of the schools—are kept short. Mr. Mosely's "severest criticism of the American school system would be that the teaching force lacks men." Of course,

The trouble lies in the salaries. In many cases the actual money pay of teachers is higher in the United States than in England; but, reckoning the difference in the standard of living, especially in those articles that are above necessities, both men and women are paid more here than there.

"England," says Mr. Mosely, "might well learn lessons from the way in which the United States has worked out its educational problem." Undoubtedly. But American teaching is not yet perfect; it fails, if anywhere, "in the matter of inculcating the power of correct and accurate English speech." Still, Mr. Mosely's opinion is forcibly summarized in two lines: "I have placed my two sons in the Hopkins Grammar School at New Haven to prepare for Yale."

But what is this that comes from Columbia? Prof. Woodberry, the head of the Department of Comparative Literature, has resigned his post, and Prof. Macdowell, the head of the Department of Fine Arts, has struck in sympathy. And why? Because, according to Prof. Macdowell, "of the thousands of students that graduate at Columbia many are the merest 'barbarians.'" Here are our young barbarians all at play! They have no idea of art, they know nothing of painting, they cannot appreciate music, their intellectual energy is entirely of the material and commercial kind; and so Prof. Macdowell finds all his efforts to work are frustrated. Evidently there are American professors that take a solid and serious view of their business. But are they not somewhat impatient? Do they not exist officially just for the purpose of civilizing the "barbarians"? It is very well, no doubt, to "call public attention to the grave state of affairs affecting the artistic development of America"; but even Rome was not built in a day. We have not yet heard of any professorial resignations on this ground in any of the British Universities. Is it because we are before or behind America?

The two questions of "national physique" and an "ideal Army"—both undergoing public investigation at the moment—are admittedly of the highest importance. We cannot but think, however, that Dr. Arthur H. Rideal takes an unfortunate course in treating them together so closely as he does in his article in the *Army and Navy Gazette* (February 13, now reprinted). He submits a scheme of national

Digitized by Google

physical regeneration "based upon the physical culture, drill, and training of our boys under the control of the Army Department." He says:

From a given date, every boy who has attained the age of twelve (or thirteen) years—unless physically unfit or destined for the Navy—should be compelled to commence a five years' course of drill and instruction calculated to fit him for a place in the ranks of the Army.

Dr. Rideal suggests an attendance of two or three hours a week as "ample to turn out efficiently trained young men." There are 425,000 boys between twelve and thirteen. Deduct 40 per cent. of physically unfit, and we have still 250,000. "In eight years," then, "we should have over a million well trained young men . . . sufficiently trained to at once take up arms in defence of the Empire. . . ." Yes, but "the martial spirit engendered by this youthful training"—we should say not "engendered" by any means, but fostered—might be turned so readily to other purposes than "the defence of the Empire." The Army would profit, no doubt; but it is for the policy of statesmen to protect us against military expenditure. Really our young men are wanted for civil life, and their physique ought to be capable of maintenance without military control and without reference to possible drafting into warfare.

We are glad to observe that a strong English Committee has been formed to engage English interest in the International Congress on Hygiene fixed for April 4 to 9 at Nuremberg. The Committee say very truly:

Speaking generally, English practice is behind the indications of present-day knowledge, and it will be invaluable to the Educational Authorities of Great Britain to have at their disposal the help derived from the experience of other countries, especially in relation to school buildings, ventilation, the efficiency of the various educational methods followed, the necessity of special schools for different types of education, the importance of good physical conditions, the avoidance of fatigue and the causes of neurasthenia and ill-health.

At the same time, in point of fact, we have no need whatever to go abroad for information and guidance on any of these matters; only the Congress will help to stir up public and official opinion, and get us forward from knowledge to practice. In the list of general addresses as yet published we find no Englishman; this omission, however, will no doubt be rectified. We observe, too, that ophthalmology is to the front, as it is in the London schools; but we should hope that at least equal attention will be given to ears and throats and noses—a point that needs urging in London as well as at Nuremberg. We hope that England will be amply and ably represented, especially in view of the anticipation that the next Congress will be held in London some three years hence.

Mr. H. C. Wyld, of Liverpool University, has been appointed by the Scotch Education Department to teach the pronunciation of English to Scotch schoolmasters. There must be plenty of money in the Department's chest, plenty of hopefulness in the Department's breast, and plenty of courage in Mr. Wyld's nerves. Is there a county in England that does not similarly require instruction? This is probably the final step in the anglicization of the "auld kingdom." The invasion is complete and triumphant. So there, at last, is "an end of an auld sang."

SUMMARY OF THE MONTH.

The Chancellor of the Exchequer, accompanied by Sir William Anson, received a deputation from the University colleges on the question of increased aid from the Treasury (February 17). Among the speakers were Principal Sir Oliver Lodge, Principal Hopkinson, the Right Hon. A. Acland, Sir John Brunner, and others. The Chancellor said he was prepared to ask Parliament to double the grant for the present year, and he hoped that it might be possible to increase the total to £100,000 next year. No grant would be given from this source in respect of any work which was not of University standard and quality.

At a recent conference of Church of England clergymen, the Rev. Dr. Fry in the chair, the following memorial was drawn up and signed (some of the signatories omitting the words "in school hours" in paragraph 5):—

We desire to express as our united conviction: (1) That the Education Acts should be impartially administered. (2) That it is expedient to amend the clauses of the Acts which deal with school management and religious instruction. (3) That such amendment should be carried out on the principle of religious equality, and should put all forms of religious teaching, including what is known as "undenominationalism," on an equal footing. (4) That in the interests of educational efficiency all schools supported by public money should be under full public control in all secular matters, including the appointment of teachers. (5) That, in view of the recognized importance of religious instruction, the State should provide facilities for the giving of such instruction in all schools, in school hours, under the following conditions:—(*a*) The instruction to be given by persons approved by the various religious bodies (*e.*, Anglican, Roman, Free Church, or Jewish), singly, or in combination with one another; (*b*) no part of the expense incurred to be paid out of public funds; (*c*) the parents of the child to decide which form of religious teaching he is to receive.

Mr. Sidney Webb, in his new volume (*London Education*, Longmans), sets out the educational work before the London County Council on May Day thus:

The new Education Authority for London is called upon to endow London with a complete educational system. To give to each of London's eight hundred thousand children during the years of compulsory school attendance the most effective physical, moral, and intellectual training; to develop in them the utmost mental acquisitiveness; to arouse in as many as possible of them the indefinable quality that we call resourcefulness, initiative, inventiveness, or the capacity for meeting new conditions by new devices; to provide for the whole of them the widest possible opportunities for continuing their studies after leaving the day school; to carry on, by a "capacity-catching" scholarship system, all whose brains make it profitable for the community to equip them with more advanced instruction; to organize, as well for these scholarship holders as for all others able to benefit by it, an efficient and duly varied system of secondary and University education, whether predominantly literary, scientific, artistic, commercial, technological, or professional in type; to provide the best possible training for teachers of every kind and grade; and so to organize the whole machine as, while increasing knowledge and efficiency, to promote everywhere the development of character and culture, and ultimately to encourage the highest scholarship and the most advanced research—all this, and nothing less than this, is the duty which Parliament has committed to the London County Council.

Mr. Webb would group the subjects at particular colleges—Science at University College, Engineering at the Central Technical College, Economics at the London School of Economics, Languages as well as Theology at King's College. He wants a million of money at once for building, and £150,000 a year.

The Bishop of Liverpool (Dr. Chavasse), speaking at the annual distribution of scholarships and awards gained by scholars under the scheme of the Liverpool Council of Education (February 8), said:

The dignity of the teacher's office was evident at once when they remembered the main object and goal of education. That object was not to cram with knowledge, not to train for a particular trade or profession, not to ensure the supremacy of British commerce or of British industry, but to teach their children how to live; to train the whole of a child for the whole of life; to turn out in the first instance not craftsmen or professional men, but men and women who, after all, made a nation, and to rear citizens for the kingdom of God. The qualifications for a good teacher might be summed up in a sentence—gifts, training, experience. The four gifts which went to form the good teacher in every age and in every country were knowledge, aptness to teach, sympathy, and reverence. It was an old fallacy which died hard that a very little knowledge was sufficient for a teacher. And, in regard to the second qualification, stores

Digitized by Google

of knowledge were absolutely useless to a teacher unless he knew how to impart knowledge to others. This gift must be more or less natural. A good teacher, like a poet, was born, and not made. But training and experience could develop and strengthen in a remarkable degree this gift when it was not naturally great, and the greatest gift without training and experience could seldom do itself full justice. As to how that training and experience were to be obtained, he suggested—(1) that, excellent as was the present proposal that all future teachers should be trained in secondary schools, it would be a mistake if the majority were not early taught to teach in an elementary school. He did not say for the half-day, but certainly for a definite time every week. (2) It was most desirable that, in the second stage of their training, they should enjoy the advantages of a University life with its freer air, its wider horizon, and its more stimulating studies, where they would mingle with others who were not to be teachers like themselves, and by contact with a larger world run less danger of becoming narrow, mechanical, and purely professional. (3) In the case of those who were peculiarly able to profit, it would, in his opinion, be wise to send them to our ancient Universities, whose place the modern Universities, most needed and useful as they were, could never hope to fill. . . . The third and crowning qualification was sympathy. He who had no fellow-feeling with a child could never train a child's character. Between him and his pupils a great gulf was fixed. Sympathy was the spring of a teacher's influence.

A CONFERENCE of representatives of over a hundred Education Authorities was held in London (February 10) to consider the present difficulty of obtaining a satisfactory supply of assistant and pupil teachers. This difficulty, in the opinion of the Chairman (Councillor Tudor Walters, Leicester), is due to the sudden need for bringing the teaching staff in provided schools up to the level of the old Board schools. Resolutions were adopted urging the Board of Education to make it incumbent upon Education Committees to train pupil-teachers and assistant teachers in numbers proportionate to the average attendance in their schools, and to continue the old system for two years longer so that it might run side by side with the initial efforts of the various Local Authorities under the new system. It was decided to constitute an "Association of Education Authorities," and a representative Committee was appointed to report to a future conference.

THE report of the Oxford University Extension Delegacy for 1903 states that the year just ended marks the highest point attained by the work since its inception: 1,886 lectures, distributed in 199 courses, were delivered in 149 centres by 36 lecturers, and the number of students in regular attendance was 21,485. The Delegates observe with much satisfaction the increased recognition given to their work (and to the parallel work of other Universities) by the Board of Education. The regulations of the Board of Education for the current year announce that, for the first time, the examination for the Vice-Chancellor's Certificate issued by the Delegacy is recognized as an alternative to the *whole* King's Scholarship Examination. The Delegates are, however, of opinion that elementary teachers would, as a rule, derive greater advantage from University Extension teaching at a later stage in their training, and that the Extension system may be most usefully adapted to the needs of students in training colleges. It has long been felt that one formidable obstacle to the development of the work of the Delegacy was the lack of a sound system of secondary education. Another was the preferential treatment accorded, under the Acts of 1889 and 1890, to scientific and technical subjects. Both these obstacles may be removed by the Education Act of 1902. Meanwhile, the immediate effect of the Act has been in some degree to disorganize University Extension work. Some centres which have depended in part upon the financial support of Technical Committees report that they have had to suspend operations in consequence of confusion caused by the transference of local control to the new Authorities; others which have worked in connexion with School Boards are in similar uncertainty as to the immediate future. The Cambridge Syndicate are arranging a summer meeting for August.

THE candidates entered for the Cambridge Local Examinations last December numbered 15,317, exclusive of 1,630 candidates examined at colonial centres. In the Senior Examination 636 boys and 1,079 girls passed, 60 boys and 14 girls being placed in the First Class. Sufficient merit was shown by 266 boys and 93 girls to entitle them to exemption from one or both parts of the Previous Examination. In the examination in Spoken French 126 of the 160 candidates passed; in Spoken German 11 of the 21 candidates. Of the Junior candidates, 3,044 boys and 1,832 girls passed, the numbers placed in the First Class being 368 and 64 respectively. In the Preliminary Examination (under fourteen) 2,575 boys and 1,643 girls satisfied the examiners.

THE writer of the series of articles in the *Times* on "Industrial Conditions in Germany," dealing with technical education, reviews the higher trade schools and (less fully) the technical high schools. He admits that "the services rendered to industrial Germany by these institutions are doubtless very great," but, at the same time, he "cannot help thinking that in regard to manufacturing industries the German high school has become rather too much of a fetish to many people in England":

I have already pointed out that in mechanical (excluding electrical) engineering it is thought to go too far by German manufacturers; then the departments of architecture, civil engineering, mathematics, and general science, however valuable in their place, would not help us in the least. The two really important departments, from this point of view, are chemistry and electrical engineering. It is impossible to exaggerate the importance of the first: it enters into every branch of manufacture and becomes more potent every day. At the high school teaching and experiment are pushed to the furthest theoretical limits, and the value to Germany is incalculable. Her chemical industries are reckoned to bring in fifty millions a year, but the application of chemical knowledge goes far beyond that and extends into a thousand channels. Nor can any man tell what it may bring forth to-morrow. This is the great lesson in industrial science that the high school has to teach. But it must not be forgotten that chemistry can be, and is, equally well taught at the Universities. So, too, electrical engineering, which has also been of immense value to Germany; but her rapid industrial advance in that line, compared with ourselves, is due less to superior knowledge than to the gratuitous retardation of the home industry by Government regulations.

AN extraordinary general meeting of the Court of Governors of University College, Reading, was held on February 6, to consider the desirability of accepting the offer made by Mr. Alfred Palmer, to give to the College a site of more than 6 acres in extent, having a frontage of 410 feet to the London Road, for the erection of new College buildings. The Lord Lieutenant of Berkshire moved, and Mr. Martin John Sutton seconded, a resolution accepting the offer. The Principal of the College (Mr. W. M. Childs), in supporting the resolution, said that Mr. Sutton had authorized him to say that his firm would present £6,000 to the building fund of the College. Besides that sum Lady Wantage had given £10,000, Mr. G. W. Palmer, M.P., £10,000, the Lord Lieutenant of the County £3,000, Mr. Morrell £1,000, and Mr. Owen Ridley, Chairman of the College Council, £500 towards the building fund. In addition to that they had the present site and buildings, which the Reading Corporation valuer had valued at £15,000, though he was not going to say that the College Council accepted that as representing the value of the property. They hoped to begin their new buildings in a few months' time. The resolution was carried unanimously. Some months ago the College authorities appealed for £80,000 for the purpose of erecting their new buildings, of which they have, according to the above figures, about half.

PRINCIPAL REICHEL, of Bangor, who has been to America on the Mosely Commission, addressed the British Sloyd Association for the promotion of all forms of Educational Handwork at University Hall, Gordon Square, W. (February 20), on manual studies in American schools and training colleges. The American object was to give more life and reality to ordinary book studies and to correct the tendency to confine pupils to literary and clerical qualifications. Boys were trained mainly in wood carpentry, turning, forging, and engine fitting. Girls were taught domestic economy, cooking, laundry work, and other useful pursuits. Both boys and girls were always directed to associate their work with drawing. The instruction was conducted by expert specialists, and in forging especially the execution was the most artistic Dr. Reichel ever saw. More attention was given to science and applied science than to Greek and Latin. Yet it was found that by giving rather less than one-fifth of the time of study to manual training the schools so engaged held their own in classical scholarships. At present there was no such training college in England. The system could not be carried out by artisans of imperfect education nor by educated people with no knowledge of *technique*. The combination of the two was required to carry out educational training in a great variety of handwork. The American manual trainer was a man or woman of good broad general education and of high technical skill.

A COMMUNICATION on the supply of training colleges has been addressed by the British and Foreign School Society to all the new Education Authorities for England and Wales. It points out that the Society has for nearly a century taken a very prominent part in supplying the country with trained teachers. There are at the present time 594 resident and 25 day students in the colleges founded by the Society, and the roll of students (1810–1902) includes the names of 7,179 men and 8,238 women. The Acts of 1902 and 1903 throw upon the new Education Authorities the duty which has hitherto been left to private initiative, and the Society is most anxious to co-operate in every way with the Authorities. Apart from the question of religious training—where the requirements of the Act in the case of provided schools and colleges approach sufficiently near to the practice of the Society—there are two points which may easily be neglected, and which the Society considers of vital importance: (1) the need for residential training accommodation for a large proportion, at any rate, of the students, and (2) the importance of bringing together students with varied experiences and ideas. As a necessary corollary of the second consideration, the Society urge two other points—namely, that, at least in the case of the smaller boroughs and counties, several Authorities should combine in supplying the needed accommodation, and that all schemes should enact that candidates for training shall be free to choose their colleges without forfeiting any pecuniary assistance granted by the Authority for the district where they reside. The expenditure may be justified by requiring the students that receive help to settle for a prescribed period in the districts of the Authorities that expend local funds upon their education and training.

THE *Jewish Chronicle*, with proper pride, draws attention to the Jewish distinctions at the Universities:

In an especial degree Jews have been of service to three of the English centres of learning. With Manchester the name of Prof. Theodores will always be connected, nor can any historian omit reference to those of Profs. S. Alexander and Arthur Schuster, the services of both of whom are still at the disposal of the authorities of Owens College, as well as Mr. Philip Hartog, who has just been called to a wider sphere. The London University, founded with Jewish assistance, at a time when Jews were excluded from the older centres of learning, and created for the benefit of those who were prevented, either on account of religious tests or otherwise, from taking advantage of the opportunities offered by Oxford and Cambridge, has throughout its history included distinguished Jews among its ornaments, both on its governing body and its examining staff. Its constituent colleges count on their respective staffs to-day Prof. I. Gollancz, Mr. Israel Abrahams, Prof. Brandin, Dr. H. Hirschfeld, Dr. Charles Myers, the Rev. A. Wolf, and Mr. A. Kahn, amongst other co-religionists. The Goldsmid Professorship has, since its institution, been in Jewish hands, while, as Professor of Political Economy, Mr. Jacob Waley was for many years a colleague of Prof. Marks. At Cambridge, previously to the appointment of the present Jewish lecturers, the Jewish tradition was created and upheld by men such as Dr. Schiller-Szinessy and Dr. Schechter. Dr. Eichholz lectured on scientific subjects, and Dr. Waldstein, though not a conforming Jew, brilliantly maintained in printed controversy the political and ethical rights of Jewish members of modern nations. Dr. Charles Myers is also at the present time lecturing on science. Since the abolition of the tests, Dr. Neubauer and Mr. Solomon have been distinguished Jews connected with Oxford; and at the same University J. J. Sylvester, a Cambridge Second Wrangler, who was prevented by religious tests from proceeding to his degree, filled with unusual distinction the Savilian Professorship of Geometry, after having been connected with several other Universities in this country and the United States.

MR. THOMAS ALLEN sends to the press the following extract from a letter recently received from the Superintendent of Education in Natal (Mr. P. A. Barnett):—

Fortunately, we have no tenure difficulty here. Teachers in Government schools have the same right to appeal that all civil servants have. Teachers in proprietary schools hold their office under agreement with the proprietors. Teachers in Government-aided schools may be dismissed by their employers, but, no doubt, if any gross cases of injustice were brought to the notice of this Department, it might decline to continue its grants; but our troubles do not come from this quarter.

THE second of the informal meetings for educational discussion organized by the Incorporated Association of Assistant Masters was held on February 18 at the Bedford Head Hotel, Mr. G. F. Daniells in the chair. There was a good attendance of representative members and of educational friends and sympathizers, including Profs. Adamson and Gregory, Dr. R. D. Roberts, Dr. H. F. Heath, and Mr. A. T. Simmons. Prof. Adamson opened a discussion on "The Probable Effect of Training upon the Status and Remuneration of Assistant Masters." He thought that improvement in the status of assistant masters was bound to follow upon registration, and that improvement from training was impossible unless the training was seriously carried out. Such training should be post-graduate. Mr. Simmons believed that one of the first effects of the training movement would be that the schoolmaster and his work would be taken more seriously; but a more immediate effect would be the existence of two classes of assistant masters—"trained veterans," and "trained neophytes," brim-full of theory, whose only experience in practical teaching had been gained under the eye of the master of method. He believed that in time the disparity between the salaries of head masters and assistants would become less pronounced. Dr. Heath was of opinion that the means of training should be found in reduced cost of University training. The last of the present series of meetings will be held on March 17.

THE Executive Committee of the Incorporated Association of Assistant Masters has passed a resolution regretting that the London County Council, in preparing a scheme for the constitution of an Education Committee for the County of London, has decided against the co-optation on the Committee of "persons of experience in education," thus reversing the policy which the Council successfully adopted in connexion with the late Technical Education Board, a policy which is compulsory upon all Education Authorities under the principal Act of 1902.

THE School Nature-Study Union held a Conference (January 30) at the Passmore Edwards Settlement, Tavistock Place, Dr. Heath in the chair (in the absence of Mr. Cyril Jackson). Dr. Heath said we were now laying stress on attitude of mind and power of observation, and no study encouraged that power more than the study of Nature. It was the common things of life that brought out the spiritual and moral strength of the child. Mr. C. B. Gutteridge (Alleyn's School, Dulwich) read a paper, in which he declared his firm belief in the value of Nature study, and his hope that the Board of Education, some of whose inspectors were present, would hear what the society had to say, and would soon recognize Nature study as the best avenue of approach to exact scientific and laboratory work for young minds, when it was built on right foundations and carried out to logical conclusions. Too often under the style of "physical measurements" a kind of makeshift, false Nature study was indulged in. They did not seek to add another subject to the present time-table, but claimed that Nature study might take the place of our more formal science systems. Some inspectors encouraged Nature study, and allowed it a place in the time-table. Among young people Nature study had many enthusiastic followers, boys and girls with some innate love for the beautiful that only needed the right training to bear immense fruit in their other branches of learning, notably in geography and drawing. Country rambles were conducive to health, and should appeal to those anxious about physical degeneration. Parents, too, admitted the claims of Nature study, which they recognized as usefully filling up a portion of holiday time. Various conferences had recently recognized the value of Nature study, but they wanted official recognition, and still asked in vain to have recognized and accepted their syllabuses of study in this direction. In conclusion, the lecturer described his work at Alleyn's School and the system he followed, the teaching being as far as possible adapted to environment. Miss Johnson (Sompting, near Worthing) also read a paper on "Nature Study in a Village Elementary School," giving her own personal experience with her scholars. Canon Steward (Principal of the Salisbury Diocesan Training College) said that to have successful Nature study sense training in the infant school was imperative, and there must be no examinations.

AT a public meeting at Cork, convened by the Lord Mayor of Cork and by the Chairman of the Cork County Council (February 6) for the purpose of urging the claims of the Catholics of Ireland to equality of treatment in the matter of University education, the following resolution was passed:—

That, while pressing for the settlement of the Irish University question, we wish also to represent that Cork has now been for over half a century the seat of a University College; that the existing College is already provided with splendid collegiate buildings and an ample enclosure, and in its general equipment is well fitted for the highest educational purpose: that we desire to strongly urge the claims of the city of Cork that, in any settlement which may be arrived at, the continuance of a local University

college shall be secured to the city; that it is of the greatest importance not merely to the city and county of Cork, but to nearly the whole province of Munster, affecting a population of over a million of persons, that local facilities for University education entailing no sacrifice of conscience should be provided; that we are satisfied that the existing institution could be reconstructed on a basis which would enable Catholics to avail of it, while doing no injustice to our Protestant fellow-countrymen, thereby securing equality for all; that we trust that the Government and the Irish members of Parliament will take care that in this matter the special claims of Cork shall not be overlooked.

"There was a large and representative attendance of the Catholics of the city of Cork," says the *Freeman's Journal*, "and some prominent Protestants also testified by their presence to their sympathy with the demand of their fellow-countrymen on the subject of higher education."

THE centenary of the death of Kant was celebrated on February 12 by the University and the town of Königsberg, the Prussian Minister of Education, Dr. Studt, and various representatives of German academic corporations being present. A memorial tablet was unveiled by Dr. Studt, who delivered a message from the Emperor William, and referred in the course of an address to the services Kant had rendered to learning and to the world. The Minister further announced that he had assigned the sum of 10,000 marks (£500) from the public resources at his disposal in support of the teachers' aid fund. The town of Königsberg has devoted a similar sum to the foundation of an annual prize for essays on philosophical subjects. On the memorial tablet which was unveiled on the wall of the Royal Castle in the Kantstrasse is inscribed the well known saying of Kant: "The starry sky above me, and the moral law within me." An exhibition in connexion with the celebrations contained a collection of busts, portraits, prints, and sketches of Kant, together with several personal relics, including his hat, gloves, walking-stick, and snuff-box.

On the evening of February 12 a special commemorative meeting of the Fellows of the British Academy was held, Lord Reay, President of the Academy, in the chair. Dr. Shadworth Hodgson read a paper on "Kant's Life and Philosophy." There could be no doubt, he said, that it was the moral aspect of Kant's teaching that had most profoundly affected men's minds. Kant's abiding influence was due to his discovery of the categorical, as distinguished from the conditional, imperative—the new kind of causality through a rational will which most men felt to be a fundamental truth.

THE Königsberg University celebration of the hundredth anniversary of the death of Kant has happened to coincide with the jubilee of the Königsberger *Hartungsche Zeitung*, whose enterprising conductors have drawn from our Prime Minister this message:

Königsberg does well to keep alive every memory connected with the great man whose writings opened a new epoch in the development of philosophy. I am proud to think that, though Kant was a "German of the Germans," his ancestors were countrymen of my own; so that Scotland may have something more than a strictly philosophic interest in the perpetuation of his memory.

THE keenness of American mathematical teachers is manifested by the formation of an Association of Teachers of Mathematics in the Middle States and Maryland at a great meeting at Teachers' College, New York City, on November 28. Over two hundred were enrolled. Prof. David Eugene Smith, Teachers' College, was elected President; and Dr. Arthur Schulze, High School of Commerce, New York City, Secretary. President Butler, of Columbia, delivered an address of welcome; papers on various phases of mathematical teaching were read; and there was an exhibition of models, calculating machines, teaching devices, &c. The next meeting will take place at Columbia University about Easter.

DURING 1903 an opinion on the question of adopting a uniform style of handwriting in the Queensland State schools was sought from school teachers. The report contained the following particulars:—

In favour of sloping style, 52; upright style, 46; slightly sloping, 12. Schools using: Jackson's Upright, 40—representing 2,814 children; Angus and Robertson's Australian, 20—representing 3,629 children; Federal Series, 15—representing 1,739 children; Vere Foster's Original, 8—representing 973 children; Vere Foster's Bold, 10—representing 2,404 children; Collins's Graphic, 87—representing 461 children; no copy books, 3—representing 96 children; Chambers's Government Hand, 2—representing 310 children; Nelson's Royal Crown, 1—representing 1,807 children; Marcus Ward's, 1—representing 7 children. The Chamber of Commerce, Brisbane, condemns the upright style of handwriting.

But the voting must have been very limited in area.

THE annual report of the Carnegie Trustees for the Universities of Scotland states that the Committee had thought it prudent to make provision for some limitation of the steadily increasing expenditure on class fees, and had framed two new regulations regarding payment of fees—one raising the standard of preliminary education required from beneficiaries, and the other affecting re-attendance at classes. During the last year £20,365 was spent on the four Universities.

WE record, with deep regret, the death of Sir Leslie Stephen, K.C.B., at the age of seventy-one, after a prolonged period of indifferent health. He was a keen thinker, with the gift of lucid expression, an indefatigable worker, and a straightforward controversialist. Apart from his editorship of the "Dictionary of National Biography," his most laborious work lay in ethics, especially on the historical side, and his most popular work in English literature. He was an enthusiastic Alpinist.

THE premature death of Mr. W. Galbraith Miller, Senior Lecturer in Law, Glasgow University, is deeply regretted. He was for twenty-six years an enthusiastic teacher and writer on three important branches of law—jurisprudence, public law, and international law. He is said to have been "the oldest teacher of law in Scotland." His attitude was German rather than English.

UNIVERSITIES.

(*From our own Correspondent.*)

Oxford.

WHAT action is to be taken as the result of the narrow majority in favour of "the barbarians" as against the Greeks in Congregation on February 9 is not yet certain. A majority of two does not smooth the path much for the reformers. There were who said that, even before the matter came before Convocation, a poll of Congregation was to be demanded. Although there was a large attendance at Congregation on February 9, yet there were a good many absentees—some perhaps thinking that, as was the case in the ladies' degree question, the matter would not be decided at a single meeting. Moreover, with the system of pricking votes on strips of paper while voters push past the Proctors, there is always a possibility of unintentional error, even though this year the Senior Proctor is one of our leading mathematicians. This idea of a poll seems now to have been dropped, and the latest report is that a statute is in process of being drafted. If there is to be a *ukase* issued and non-residents called up for Convocation, it certainly looks very much as if the verdict of Congregation would be reversed—particularly if stress is to be laid on the fact that exemption from Greek in Responsions will mean also exemption from Greek in the examination in the Gospels. We fancy that the clerical vote outside of Oxford would be dead against the innovation.

Yet at the meeting of Congregation the divinity question was carefully avoided by all the speakers. The speaking was not of a very high order, and indeed Oxford does not at present produce orators. We seem to be so critical of any attempt at appealing to the sentimental side that the carefully prepared epigram and the insidious dilemma are the only accepted rhetorical arts. We had been informed before the meeting that there were to be two set speakers on each side, Mr. Macan and Dr. Bourne for the men of science, and Mr. Godley and Mr. Phelps for the Greeks; but, as a matter of fact, the Warden of Wadham upset the arranged order by following Mr. Macan and supporting him. So that the speakers were three to one in favour of the resolution. Whether Mr. Phelps decided that Dr. Bourne's speech had sufficiently damaged the cause for which he was speaking, or whether the Vice-Chancellor, though known to be on the Greek side, considered that four speeches were enough, at any rate the division was taken immediately after Dr. Bourne's speech. Mr. Godley's best points were that the men of science acknowledged that an education with Greek was the most comprehensive and best of educations, and yet they were asking the University to provide them with something worse than the best education; and, secondly, that, though the resolution proposed to represent the scientific view on the subject, the opinion of teachers of science in the University was not unanimous, while distinguished men of science outside the University were opposed to the change. The

Digitized by Google

arguments for the change were that the Greek learned was a pitiful amount, useless for scientific purposes even in the matter of constructing scientific terms, and that the time spent on acquiring the minimum was uncongenial to the learner and to the teacher, and involved both wasting their time.

There was one point which did not come in for notice, and that was the fact that while originally we were supposed to be about to render assistance to a "worthy class"—*i.e.*, those who were incapable of managing the Greek, and, therefore, not the highest class—yet Dr. Bourne talked of the measure as if it would provide us (if carried) with a supply of brilliant original researchers. We do not really think that it was for this small class that the agitation was started or conducted. Some of Dr. Bourne's supporters were rather horrified by the mention of Heraclitus, and all his opponents by his repeated description of Greek studies as "Hellenistic."

Hot-foot on the Greek discussion we are threatened with yet another; indeed, the matter is to come up on March 1. This new vexed question arises over the appointment of examiners in the Theology School. One party, *i.e.*, the High Church party, regard the Theology School as the preliminary to taking "Anglican orders," and as the one hold that "the Church" still keeps over the University. Therefore, they wish to limit the examiners—they cannot, of course, limit the examinees—to their own denomination. The other party hold that the Theology School in itself is not, and was not intended to be, thus narrowed in its scope; and that, seeing that Oxford has opened its doors to a number of able men—both teachers and taught—who do not belong to the Established Church, we are doing a narrow and misguided thing if we do not admit as examiners men whose theological work is of the highest class and reputation. Mr. Leighton Pullan is a strenuous advocate against the admission of these men; but the other view has been presented both ably and moderately by Mr. Allen in a pamphlet which has been circulated among members of Congregation.

More literature is flying about with reference to the Regius Professorship of Medicine, but at present matters seem at a deadlock. An article appeared in the *Oxford Magazine* imputing that a suggestion was sent to Mr. Balfour "in the name of the University" that the Regius Professorship should be combined with that of the Readership in Pathology. This statement drew an immediate reply from the Vice-Chancellor to the effect that no such communication was sent "in the name of the University."

The syllabus for the new Examination in Modern Languages has just been issued, and has produced the inevitable crop of criticism. It certainly seems as if not much weight had been attached in the regulations to the idea of regarding the languages as "living instruments of thought," for it is pointed out that no modern prose writer later than 1762 is included in the French scheme, with the exception of Victor Hugo; while in the German scheme "no historian, no philosopher, and no writer of science finds a place." One critic describes the new school as constituted as being a school of "mediæval linguistics." From what has been written above it will be seen that things are more lively in Oxford than they generally are in the Lent Term.

The O.U.D.S. has just finished a successful production of "As You Like It." The general level of performance was creditably high, and the "walking athlete" has not bulked so largely in the minor characters as used to be the case a decade ago. The wrestling scene was unusually realistic. All the same, it seems a pity that the Society should devote itself to producing what has so often been produced before. We are, of course, at Oxford much more handicapped in our choice of subjects than our friends at Cambridge; but it seems strange that we should leave it to Cambridge, despite their wider choice, to produce—and produce excellently—Greek plays which are not to be seen in London. We still can recall a very successful "Frogs" in Oxford.

The floods drove away the University Eight from the Isis, where practice and coaching had been carried on under almost insuperable difficulties. The Eight is not very good, and has been further handicapped by the fact that the President, Mr. Monier-Williams, is unable to row; in the latter respect we can exchange sympathies with Cambridge, who are in a similar plight.

The Torpids have not been very exhilarating, except to the bold spirits who ploughed along the submerged tow-path. The stream has pulled weak crews to pieces, and at the same time rendered the task of making bumps more difficult for the inexperienced coxswain.

Our Association Eleven furnished Cambridge, as we feared, with a bloodless victory; and it certainly looks as if the Hockey team would follow the bad example, as they were beaten in the last trial game by a scratch team mainly composed of the brothers Stocks. Hockey cup ties are now in full swing, but the grounds have been in a terrible state of water and mud, and science at a discount. The golf players have also been full of lamentations at their "mud-larking." Lacrosse seems to have taken a firm hold, and there are now two teams, so that the undergraduate still continues to take exercise.

(From our own Correspondent.)

Cambridge.

On March 1 the King and Queen will come here to open the new buildings and to bestow their benison upon the bricks and mortar which have so recently sprung up in our midst. The official programme is as follows. Arriving at 12 o'clock, their Majesties will drive to the Senate House, where there will be bowing, scraping, and speeches, the Corporation having previously discharged their address upon the platform of the Great Northern station. An adjournment will be made for lunch, at which the number of Cambridge guests is to be strictly limited to twenty gentlemen and five ladies. The next item is the assembly in the quadrangle of the new buildings, where each block will be inspected and declared open by the King.

The attitude of the townspeople is decidedly interesting. As at first the affair was deemed a purely University function, the Corporation decided to have no decoration in the streets, and agreed to a route for the King's procession which afforded most room for the expected crowds, increased numbers in the narrow streets naturally meaning more police. It suddenly struck some of the tradesmen, however, that windows on the line of the route would be a valuable asset, and petitioning is in full force to upset the present arrangements, so as to make the King pass through the business parts of the town. Rumours of knighthoods are very rife: those little things are highly prized in a society where procedure is a matter of local convention and essentially *sui generis*. London and Paris are finding frocks for the wives and daughters of the dons; and, if the weather is favourable, the affair may be a grand success.

The University possesses a very valuable asset in the shape of the land lying between Trumpington Street and Hills Road. The western portion of this, consisting of 20 acres, is now occupied by the Botanical Gardens, while the eastern portion of 17 acres is let out in allotments at a rental of about £20 per acre. Recently the Education Committee of the County Council have made an offer of £7,000 for about $1\frac{3}{4}$ acres of this eastern portion for the purpose of building a county school for girls. The Botanical Garden Syndicate are against the proposed sale, on the ground that it may impede the development of the Botanical Department in the near, if not in the remote, future. The Financial Board strongly recommend the sale. In the debate on the subject, Mr. A. P. Humphry, whose experience both as a member of the County Council and as a University financier is very considerable, pointed out the pecuniary advantages of the transaction, and also dwelt upon an argument which, as a rule, is not introduced into University debates. He suggested that the colleges and the University, being owners of 50 square miles of land in the county, should consider their position as landlords, and do something for a class to which their tenants mainly belong, even at the cost of some small sacrifice. The land is too far from the centre of the town to be available for any University purpose other than that of a botanical garden; and, as ordinary building land, the price offered was not likely to be exceeded in the present generation. The land will probably go.

There are to be changes in the management of the Pitt Press: hitherto the partnership between the University and Messrs. Clay being on the terms that the University has five-sixths of the capital and profits, while Messrs. J. & C. F. Clay take one-sixth. There are practically two businesses, the printing in Cambridge and the publishing in London at the Cambridge Press Warehouse; the average profit made by the University being about £4,000 per annum. The new arrangement is that Mr. John Clay is to take one-tenth of the business and to manage the Cambridge department as hitherto, while Mr. C. F. Clay becomes a salaried manager of the London business. The change seems a wise one, and as long as the Press is such a good dividend earner criticism in the Senate will not be forthcoming.

The Library Syndicate have made some new proposals for the

Digitized by Google

reorganization of the building; the suggestions seem sensible enough, though the provisions against fire are absolutely inadequate. There is a Fire Prevention Syndicate in existence, but the fact remains that our most valuable possession, the Library, affords very slight evidence of the most elementary precautions having been taken against fire, or, what is worse in this case, water.

There is no hint yet as to who is to obtain the vacant Mastership at Magdalene; the present Lord Braybrooke evidently does not care to present himself, but he will not do much better.

London. In view of the fact that, until further order, a candidate will be allowed to take the Intermediate Examination for Internal Students and the B.A. Examination for External Students on condition that he take at some time previous to his Final Examination any extra subjects which a candidate taking the Intermediate Examination for External Students would have been required to take, it was resolved (January 27): "that a candidate taking the extra subject to complete his Intermediate Examination as an external student, after having passed the Intermediate Examination as an internal student, be required to pay a fee of £5, which shall cover his first entry for the Final Examination."

The Institution of Civil Engineers have decided to recognize the B.Sc. degree in Engineering of the University as a degree exempting from the Associate Membership Examination.

Manchester. At a meeting of the Court of Governors (February 4), the following resolution was passed:—

That this meeting of the University Court do hereby approve of the Bill intended to be introduced into Parliament intituled "A Bill to incorporate the Owens College, Manchester, with the Victoria University of Manchester, and to transfer the property and liabilities of the said College to the Victoria University of Manchester, and for other purposes," subject to such additions and alterations and variations as Parliament may think fit to make therein.

On the same day a similar resolution was passed by the Court of Governors of Owens College.

Dr. Sanday and Dr. Fairbairn were added to the Advisory Committee of the Faculty of Theology.

Sir F. Forbes Adam has been appointed Chairman of the University Council. The following have been elected Deans of Faculty:—Arts, Prof. Tout; Science, Prof. Schuster; Music, Dr. Brodsky; Commerce, Prof. Chapman.

Victoria—Leeds. At a meeting of the members of the Yorkshire College Company (February 10), Mr. A. G. Lupton (Chairman of the Council) said he believed that the charter for a new University for Yorkshire would now pass without opposition. Various little alterations in the charter had been made, and the final draft was now in the hands of the Privy Council. He moved the confirmation of the resolution passed on January 20, which approved the proposal now before Parliament in the form of a Bill to merge the Yorkshire College in the Victoria University of Yorkshire and to transfer all the property and liabilities of the College to the University. This was seconded by Mr. F. W. Barr, and carried unanimously. Nearly £40,000 has been raised in the county towards the preliminary expenses of the new University.

The Council of University College, Sheffield, have petitioned Parliament against the portion of the Leeds Bill claiming the term "Yorkshire" in the title of the University, setting out a long array of objections.

Wales—Cardiff. The inaugural meeting of the Association of the University Settlement in Cardiff was held on February 4. The gathering was large and enthusiastic. The following motion, proposed by Principal Griffiths, was passed:—

This meeting desires to express its satisfaction with the steps that have now been taken to utilize the valuable gifts of Lord Tredegar and Mr. Woolcott Thompson for the purposes of the University Settlement, and its cordial approval of the decision of the Association to endeavour at once to secure the funds that are necessary for the completion and equipment of the first part of the proposed buildings.

At the half-yearly meeting of the Court of Governors (February 18), Principal Griffiths said he feared that, unless Sir Alfred Thomas and his colleagues exerted themselves in the House of Commons, Wales would not participate in the increased Government grants to University colleges. He knew of the deputation that waited upon the Chancellor, and he had communicated with his brother Principals in Wales on the subject, but he got a very broad hint that no Welsh college need apply. The reason given was that the University colleges in Wales were already in receipt of £4,000 per annum from the Treasury, whereas many of the English colleges received only £2,000. Thus Wales had been left out in the cold. He understood that of the extra grants contemplated not a penny was to come to Wales. Even if it were otherwise, he feared the extra grant would be small, because it appeared that the governing principle in the distribution of the increased vote would be that the distribution should be in proportion to local efforts. Thus when in Liverpool, for instance, seventeen citizens could be found to give £10,000 each the efforts in South Wales would in comparison appear very puny. Mr. Phillips said that distribution *pro rata* to local effort should prove an admirable incentive.

The Court at the same meeting passed a statute to enable them to charge an annual registration fee of one guinea to each student (as at Bangor and Aberystwyth).

Principal Griffiths said he was not lacking in sympathy with the working classes, but this matter must be regarded from a business standpoint. That the working classes gained from having the college in their midst was shown by the fact that they had at present in the college 150 students who, in virtue of exhibitions and scholarships, were enjoying free tuition. Last session there were 164 free students. No college in the kingdom could show such a higher percentage of free students; yet the finances of the college were such that the Finance Committee dared hardly give him permission to get absolutely essential apparatus for use in the college. In the Medical School they had actually to send some students to London two or three weeks before the examinations, so that they could see the ordinary apparatus in use in ordinary laboratories. They should not do an injury to a large mass of students in order to benefit the very poorest. The cost per head of tuition in that college was between £23 and £24, without including the capital value of the buildings, and yet the students were paying only £10 for that tuition. Thus every additional student that came to the college above a certain age made their financial position worse. This season the students had increased by 34, and the increase was in the Chemistry, Engineering, and Mining Departments—the very departments that South Wales wished the college to develop—and in consequence of this increase he would be bound to ask for two extra lecturers and demonstrators. He did not think it was too much to ask the parents of those students to pay the extra guinea for the second and third years.

Glasgow. Three names having been put forward for the Chancellorship—the Earl of Stair, Lord Kelvin, and Mr. Haldane—it will be necessary to take a vote. The formal election cannot be made till the next half-yearly meeting of the Council (April 6). The electors number 6,363.

St. Andrews. St. Andrews University has decided to introduce a Commemoration Day in order mainly that those who have left this seat of learning may be led to maintain their interest in its work and progress. The first Commemoration Day will be observed in connexion with the Graduation on March 29, and it will take the form of a dinner in the evening, and, quite appropriately, a golf match on the following day.

ARITHMETICAL CURIOSITIES.

A recent number of *Success* publishes the following, sent by Henry Tannenbaum, of Toledo, O.:—

123456789	times	9	plus	10	equals	1111111111,
123456789	„	18	„	20	„	2222222222,
123456789	„	27	„	30	„	3333333333,
123456789	„	36	„	40	„	4444444444,
123456789	„	45	„	50	„	5555555555,

Digitized by Google

This table is still more interesting when it is noticed that each multiplier is divisible by 9, and that when the figures of each answer are added together and the added number is subtracted the answer is 0. For example, the sum of 1, 1, 1, 1, 1, 1, 1, 1, 1 is 10; 10 minus 10 is 0.

Mr. Tannenbaum also sends the following:—

987654321	times	9	equals	8888888889,
987654321	„	18	„	17777777778,
987654321	„	27	„	26666666667,
987654321	„	36	„	35555555556,
987654321	„	45	„	44444444445,
987654321	„	54	„	53333333334,
987654321	„	63	„	62222222223,
987654321	„	72	„	71111111112,
987654321	„	81	„	80000000001.

In this table it will also be noticed that each multiplier is divisible by 9, and that, if the figures in each answer are added together, they will form a total which, if added together, will equal 9. For example, take the second answer, 17777777778. These figures, added together, equal 72, and 7 plus 2 is 9.

NATURE STUDY IN PRACTICE.

ELSEWHERE we report the recent Conference of the School Nature-study Union, and refer to Mr. C. B. Gutteridge's lecture. On the particular practice at Alleyn's School, Dulwich, under his personal direction, he said:

As the master principally concerned with the introduction of Nature study at Alleyn's School nearly two years ago, I have always advocated the seasons as our guide. I have recently been enabled to incorporate into our school system, by the kindness of my chief, the "Alleyn Nature-study and Observation Leaflets," which I have published for the autumn and spring terms. I take two junior forms and a senior form in Nature study, and the boys, by the use of my leaflets, are inspired with an appropriate subject suitable to the time of year, week by week. The leaflets contain twelve ideas on heuristic lines, and for two separate hours weekly in one form, and for an hour in the other two forms, the boys in turn discuss before the class the ideas my leaflets have suggested to them, or recite (as it is called in America)—that is, talk of their thoughts and also what they have observed. I do very little, except keep the debate in hand as a guiding chairman and sum up or correct misstatements.

We both learn from one another and enjoy it, and anticipate the "lesson," if such a term is applicable to our informal discussions. The boys bring drawings and objects relative to the matter in hand whenever I ask them to do so, and these illustrations and gifts are arranged about the schoolroom to assist the Nature-study atmosphere. Our art master and form masters also kindly correlate much of their drawing lessons to my Nature-study subject. In the upper part of the school, where I am a form master, with thirty-four big boys of ages fourteen to sixteen, the plan as indicated is working with enthusiasm and success.

We are dependent on the weather, of course, for our frequent excursions away into the country or outside at work in the school field. The Nature garden work is sometimes done in school hours, but more often in the leisure time of the boys and myself. The boys bring their own tools—good spades, rakes, forks, trowels, &c.; and, by our united efforts, we have made six enclosed plots measuring about 12 feet long by 5 or 6 feet wide. Seeds, bulbs, plants, &c., provided by the boys, are grown in these plots, under my direct superintendence, for observational purposes or for direct use in the schoolroom. Last year we grew flax as a curiosity in one plot. Note-books are, of course, at hand, and my garden captains, in charge of five, assist when there are thirty boys at work. I can always enlist the services of a very enthusiastic staff of willing volunteers whenever I wish, and some of my bigger boys are now beginning to want to join in the outdoor operations. All the work proper to a Nature garden in the varying seasons of the year is done by ourselves, and the boys are thus encouraged in the valuable principle of self-help and the dignity attaching to manual labour. The boys are also stimulated to use the camera—there is a very flourishing photographic society at Alleyn's—in our special Nature-study work as an evidence and record of their observations.

At Alleyn's we are fortunate in having a fine field of about 13 acres in extent, with plenty of trees and an adjacent annexe for tennis courts, near to which are our gardens already mentioned. The trees in the school field have been the subjects of much talk and discussion, as we have oaks, poplars, chestnuts, elms, &c., not omitting rooks and crows, and their interesting characters and conversations.

The Nature-study teaching is thus as far as possible adapted to environment. One particular line of inquiry we have had in hand is the peculiar causes of the destruction of Dulwich oak trees, their great enemies being the goat and wood moths, fungus growth, and their own strength, which often exhausts the surrounding soil.

In conclusion, I had resolved to devote some of my leisure time to making the acquaintance of my pupils outside the schoolroom. First of all, our rambles comprised visits to museums, the Houses of Parliament, the Royal Stables, the Royal Mint, the Royal Academy, and other picture galleries and public buildings, and sometimes occasional visits to the country. We most frequently visited the Natural History Museum, South Kensington, as the enthusiasm of my boys and myself seemed most attracted there; and gradually, from a natural love of open air and country scenes, we wished to see the real things. Now, our happiest hunting ground is *via* Herne Hill to Bromley for Hayes Common, and our Nature-study work in school is thus supplemented by these whole-day outings on Saturdays, our leisure day, through which we all thus gain health and some useful knowledge of the common things that surround us. Such is my work; and, on behalf of all engaged in similar work in secondary schools, I would like to advance the claims of Nature study for more direct official recognition by the Board of Education.

THE TEACHING OF NATURAL SCIENCE.

THE Secretaries of the Royal Society have submitted to the Universities of the United Kingdom the following "Statement regarding Scientific Education in Schools, drawn up by a Committee of the Royal Society":—

Notwithstanding efforts extending over more than half a century, it still remains substantially true that the public schools have devised for themselves no adequate way of assimilating into their system of education the principles and methods of science. The experience of "modern sides" and other arrangements shows that it can hardly be expected that, without external stimulus and assistance, a type of public-school education can be evolved which, whilst retaining literary culture, will at the same time broaden it by scientific interests. On the other hand, it is admitted that many students trained in the recent foundations for technical scientific instruction have remained ignorant of essential subjects of general education.

The bodies which can do most to promote and encourage improvement in these matters are the Universities, through the influence which they are in a position to exert on secondary education. This improvement will not, however, be brought about by making the avenues to degrees in scientific or other subjects easier than at present. Rather, the test of preliminary general education is too slight already, with the result that a wide gap is often established between scientific students careless of literary form and other students ignorant of scientific method.

It may be suggested that the Universities might expand and improve their general tests, so as to make them correspond with the education, both literary and scientific, which a student, matriculating at the age of nineteen years, should be expected to have acquired; and that they should themselves make provision, in cases where this test is not satisfied, for ensuring the completion of the general preliminary education of their students, before close specialization is allowed.

In particular, it appears desirable that some means should be found for giving a wider range of attainment to students preparing for the profession of teaching. The result of the existing system is usually to place the supreme control of a public school in the hands of a head master who has little knowledge of the scientific side of education; while the instructors in many colleges have to deal with students who have had no training in the exact and orderly expression of their ideas.

Our main intention is not, however, to offer detailed suggestions, but to express our belief that this question of the adaptation of secondary education to modern conditions involves problems that should not be left to individual effort, or even to public legislative control; that it is rather a subject in which the Universities of the United Kingdom might be expected to lead the way and exert their powerful influence for the benefit of the nation.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—ED. *E.T.*]

"ESPERANTO."

To the Editor of "The Educational Times."

DEAR SIR,—Allow me to thank you for your editorial note to M. Hamonet's letter. May I also point out that he is evidently under the extraordinary impression that by "auxiliary" is meant

Digitized by Google

a "universal" language to destroy other languages. Quite the contrary is the case: what is advocated is some kind of international shorthand, so to say, which, being used for extra-national communications, will permit the devotion of much more time to the real study of national languages, those treasure-houses of the past. I cannot off-hand give the number of French *lycées* where Esperanto is taught by official permission—they are about twenty-three: amongst them I remember Havre, Amiens, Boulogne, Dijon, Grenoble, besides at least five or six in Paris. If M. Hamonet will send me his address, I will send him the full list, with the names of the professors; it is too long to be given here. —I am, Sir, &c.,

E. A. LAWRENCE.

TENURE IN SECONDARY ENDOWED SCHOOLS.

To the Editor of "The Educational Times."

SIR,—I beg to thank you for your article on "The Tenure of Assistant Masters." There seems to me only one point that now needs serious discussion, and that is, whether the decision of the Board of Education should be final.

Is it really worth while to insert such a clause?

I am a constant reader of the *Schoolmaster*, and have been for several years. Since primary teachers were granted a right of appeal, I do not recall a single instance of a case of wrongful dismissal appearing in its columns.

I quite agree with your leader: "There will be very few appeals." But, even if there were many, and the decisions of the Board of Education were right and just, what else could the appellant expect from a further appeal?—I am, Sir, &c.,

THOMAS ALLEN.

Woodbury, Malvern Link, *February* 19, 1904.

COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on February 20. Present: Mr. Butler, Vice-President, in the Chair; Rev. J. B. Blomfield, Mr. Charles, Mr. Chettle, Miss Crookshank, Mr. Eve, Mr. Hawe, Mr. Kelland, Rev. R. Lee, Rev. G. E. Mackie, Mr. Millar Inglis, Mr. Pinches, Miss Punnett, Dr. R. P. Scott, and Rev. Dr. Scott.

The minutes of the last meeting were read and confirmed.

The Secretary reported a considerable increase in the number of entries for the forthcoming Professional Preliminary Examination to take place on the 1st to 3rd of March.

The Dean and Treasurer were appointed to represent the views of the Council at a conference with the Consultative Committee on the subject of School-leaving Certificates on February 25.

Diplomas were granted to Miss G. Clemmans and Miss J. F. Montgomery, who had passed the required examination for the Associateship of the College.

The report of the Finance Committee was adopted.

The report of the Examination Committee was adopted.

The report of the Dean and Sub-Dean for Inspections was adopted, and it was resolved that the Inspection of Schools under the new Scheme should be continued.

Professor J. Adams, B.Sc., M.A., F.C.P., Principal of the London Day Training College, was elected a member of the Council.

The Rev. T. W. Sharpe, C.B., was re-elected President of the Council, and Dr. R. Wormell, Sir Philip Magnus, and Mr. E. A. Butler, Vice-Presidents. Mr. H W. Eve was re-elected Dean, and Mr. E. E. Pinches Treasurer of the College.

The following persons were elected members of the College:—

Miss E. Dorman, A.C.P., 19 Babbacombe Road, Bromley, Kent.
Mr. R. P. Jones, B.A Lond., L.C.P., Tettenhall College, Wolverhampton.
Mr. J. Lawrence, M.A. Oxon., M.A., D Lit. Lond., 72 South Hill Park, Hampstead, N.W.
Mr. A. C. Patrick, L.C.P., Cliff House, Bruton, Somerset.
Miss M. B. Roe, A.C.P., 72 Breakspears Road, Brockley, S.E.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHOR.—Adamson's Our Defective System of Training Teachers.

By the GENERAL MEDICAL COUNCIL.—Minutes of the Council for the Year 1903.

By the BUREAU OF EDUCATION, WASHINGTON.—Report of the Commissioner of Education for the Year 1902, Vol. I.

By the SMITHSONIAN INSTITUTION.—Annual Report of the Board of Regents for the Year ending 30 June, 1902; Report of the U.S. National Museum for the Year ending 30 June, 1901.

By C. J. CLAY & SONS.—Cambridge Higher Local Examination Class List, &c., for December, 1903; Cartmell's Kohlrausch's Das Jahr 1813; Flather's Scott's Kenilworth; Plummer's Corinthians II. (Cambridge Bible for Schools and Cambridge Greek Testament).

By W. B. CLIVE.—London University Guide and University Correspondence College Calendar, 1904; Matriculation Directory, January, 1904; Hall's Modern Navigation.

By GINN & Co.—Baker's Elementary Plane Geometry; Gaston's Irving's Oliver Goldsmith; Painter's Elementary Guide to Literary Criticism; Van Dyke's Introduction to the Poems of Tennyson.

By HACHETTE & Co.—Rey's de Ségur's Histoire de la Princesse Rosette; Saunois's La Moquense; Smith's Translation of Rousselle's Metric System; Themoin's French Lessons on the Gouin Method, Vol. I.; Weber's New Course of Commercial German in Twenty Lessons; Weiss's Hauff's Die Geschichte von Kalif Storch; and Immermann's Die Wunder im Spessart.

By HUTCHINSON & Co.—Stanley's Life of Dr. Arnold (abridged).

By MACMILLAN & Co.—Allcock's Theoretical Geometry for Beginners, Part III.; Barnard and Child's New Geometry for Junior Forms; Cotterill's Tennyson's The Cup; Fowler's Palgrave's Golden Treasury of Songs and Lyrics, Book First; Hall and Stevens's A School Geometry, Part V., and Parts I.-V. in one volume; Milner-Barry's von Scheffel's Der Trompeter von Sakkingen, and Word- and Phrase-Book to the same; Rowe and Webb's Tennyson's Dream of Fair Women, &c.

By METHUEN & Co.—Boulton's Geometry on Modern Lines; Burnside's Old Testament History for Schools; Sornet and Acatos's Junior French Grammar; South's Gospel according to St. Matthew.

By RIVINGTONS.—Pressland's Introduction to the Study of Geometry; Wade's Second Year French Writer.

Calendars of the Pharmaceutical Society and the University of Liverpool.

COLLEGE OF PRECEPTORS.

CERTIFICATE EXAMINATION, DECEMBER, 1903.

The following is the list of the successful candidates at the Colonial and Foreign Centres.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively:—

a. = Arithmetic.	*ge.* = German.
al. = Algebra.	*gm.* = Geometry.
d. = Drawing.	*h.* = History.
e. = English.	*l.* = Latin.
f. = French.	*s.* = Scripture.
g. = Geography.	*sp.* = Spanish.

The small figures [1] and [2] prefixed to names in the Second and Third Class Lists denote that the Candidates were entered for the First and Second Classes respectively.

In the addresses - Acad. = Academy, C. or Coll. = College, Coll. S. = Collegiate School, Comm. = Commercial, Conv. = Convent, End. = Endowed, Found. = Foundation, H. = House, Inst. = Institute, Int. = International, Inter. = Intermediate, Prep. = Preparatory, S. = School, Tech. = Technical, Univ. = University.

BOYS.

FIRST CLASS (OR SENIOR).—PASS DIVISION.

Nicolle, O.D. *s.*	City College, Colombo
Morgan, H.B.	Private tuition

SECOND CLASS (OR JUNIOR).—HONOURS DIVISION.

Cocks, M.B. *e.f.*	Private tuition
Wills, C.S. *a.f.*	The Middle S., Georgetown, B. Guiana
Francis, O.M. *l.*	Gram. S., St. George's, Grenada

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,147,020. Annual Income, £400,381.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

A SELECTION FROM
CASSELL'S EDUCATIONAL WORKS.

CASSELL'S UNRIVALLED DICTIONARIES.

Cassell's New French Dictionary. (FRENCH-ENGLISH—ENGLISH-FRENCH.) Edited by JAMES BOÏELLE, B.A., Officier d'Académie; sometime Examiner in French in the University of London. 1,220 pp., demy 8vo, strongly bound in cloth, 7s. 6d.; or in half-leather, 10s. 6d.
"Quite the best dictionary of its size that has been issued."—*Globe.*
"The best at the price in the market."—*London Quarterly Review.*
"The best French and English dictionary of an ordinary size in existence."—*Critical Review*, Paris.

Cassell's French Dictionary. (FRENCH-ENGLISH and ENGLISH-FRENCH.) 696th Thousand. Revised and Corrected. 1,150 pp., cloth, 3s. 6d.; half-morocco, 5s.

Cassell's German Dictionary. (GERMAN-ENGLISH and ENGLISH-GERMAN.) 317th Thousand. 1,220 pp. *Cheap Edition.* Cloth, 3s. 6d.; half-morocco, 5s.

Cassell's Latin Dictionary. (LATIN-ENGLISH and ENGLISH-LATIN.) 142nd Thousand. *Cheap Edition.* 3s. 6d.; half-morocco, 5s.

ARITHMETIC.

The Marlborough Arithmetic Examples. Revised and Arranged by the Rev. C. E. B. HEWITT, M.A., Assistant Master at Marlborough College. Cloth, 3s.
Masters' copies, containing Examples and Answers, 4s. 6d. Supplied to Teachers only.

HISTORY.

A History of England. By H. O. ARNOLD-FORSTER, M.A. *Fourth Edition, Revised.* From the Landing of Julius Cæsar to the Present Day. Fully Illustrated. 816 pp., cloth, 5s.; or, handsomely bound, cloth gilt, 6s. 6d.

ART MANUALS.

Marine Painting in Water Colour. By W. L. WYLLIE, A.R.A. With 24 Coloured Plates. Cloth, 5s.

Landscape Painting in Water Colour. By J. MACWHIRTER, R.A. With 23 Coloured Plates. Cloth, 5s.

Cassell's Educational Catalogue will be sent post free on application.

MACMILLAN & CO.'S LIST.

New Works on Geometry to meet the New Requirements.

A SCHOOL GEOMETRY.

By **H. S. HALL, M.A.**, and **F. H. STEVENS, M.A.** Crown 8vo.

PARTS I. and II. PART I. Lines and Angles, Rectilineal Figures. PART II. Areas of Rectilineal Figures (containing the substance of Euclid, Book I.). 1s. 6d.
PART III.—Circles (containing the substance of Euclid, Book III., 1-34, and Part of Book IV.). 1s.
PARTS I., II., and III. 2s. 6d.
PART IV.—Squares and Rectangles, Geometrical Equivalents of certain Algebraical Formulæ (containing the substance of Euclid, Book II. and Book III., Props. 35-37). Sewed, 6d.
PARTS I.-IV. 3s.
PARTS III. and IV. 1s. 6d. [*Shortly.*
PART V.—Containing the substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d.
PARTS I.-V.—4s. 6d.
PARTS IV. and V.—Containing the substance of Euclid, Book II., Book III., 35-37, and Book VI. 2s.
PART VI.—Containing the substance of Euclid, Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures. [*In the press.*

*** This Work is based upon the recommendations of the Mathematical Association.

JOURNAL OF EDUCATION.—"Seems quite the best of the new text-books of geometry that have lately been published. It is moderate in its changes, and excellent as to arrangement and selection."

A NEW GEOMETRY FOR SCHOOLS.

By **S. BARNARD, M.A., Assistant Master at Rugby School, late Fellow and Lecturer at Emmanuel College, Cambridge,** and **J. M. CHILD, B.A. (Cantab.), Lecturer in Mathematics, Technical College, Derby.** Crown 8vo, 4s. 6d.

NATURE.—"There is no doubt that in this work of Messrs. Barnard and Child the teacher will find every requisite for the modern teaching of geometry, including a very large number of illustrative examples."

A NEW GEOMETRY FOR JUNIOR FORMS.

By **S. BARNARD, M.A.**, and **J. M. CHILD, B.A. (Cantab.).** Crown 8vo, 2s. 6d.

*** This Volume contains all the Practical and Theoretical Geometry required for a Pass by Junior Candidates in the University Locals.

THEORETICAL GEOMETRY FOR BEGINNERS.

By **C. H. ALLCOCK, Senior Mathematical Master at Eton.** PARTS I., II., and III., Globe 8vo, 1s. 6d. each. PART IV. [*In prep.*]

SCHOOL WORLD.—"To those teachers who prefer a modified Euclid to text-books which are frankly revolutionary this book will be very acceptable. Undoubtedly Mr. Allcock has succeeded in retaining the good features of the 'Elements,' while removing most of those which make Euclid's work most distasteful to the schoolboy."

PRACTICAL EXERCISES IN GEOMETRY.

By **W. D. EGGAR, M.A., Assistant Master at Eton College.** 2s. 6d.

MATHEMATICAL GAZETTE.—"We welcome heartily Mr. Eggar's book as one that should supply a widely-felt want. . . . The book is well got up: the figures are effectively drawn on an ample scale. We see everywhere signs of a teacher whose heart is in his work."

EIGHTH EDITION, Revised. WITH A CHAPTER ON GRAPHS.

ELEMENTARY ALGEBRA FOR SCHOOLS.

By **H. S. HALL, M.A.**, and **S. R. KNIGHT, B.A.** Globe 8vo, 3s. 6d. With Answers, 4s. 6d. Answers, 1s. KEY, for Teachers only, 8s. 6d.

MACMILLAN & CO., LIMITED, ST. MARTIN'S STREET, LONDON, W.C.

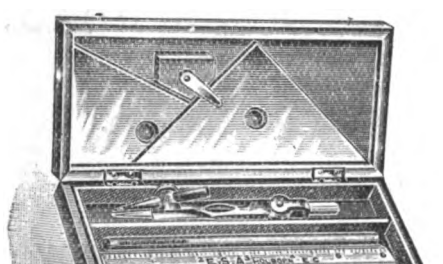
For THE OXFORD AND CAMBRIDGE LOCALS.

Syllabus Requisites for Geometrical Drawing.

BOXES OF INSTRUMENTS.

Containing every article required by Candidates entering for either of the above Locals as stipulated in the Schedules for Geometry.

Every Instrument is of English make and thoroughly reliable.



No 10A.—A Strong, Sliding, Cloth-covered Box, 6½ in. by 3½ in. by ¾ in.

Containing:—**1 Brass Bow Pencil Compass** to take any size of Pencil up to full size.
1 Black Lead Pencil, "H," and **1 Compass Pencil.**
1 Boxwood Rule, 6-inch, graduated in inches, tenths, and eighths of an inch, centimetres, and millimetres, and marked as a **Protractor.**
1 Nickel Set Square (unbreakable), 45°.
1 Nickel Set Square (unbreakable), 60°.

Price **1s. 9d.** per Box. { Price for orders of 6 dozen, **1s 7½d.** per Box. („ „ 12 dozen, **1s. 6d.** per Box.

No 11A.—Containing Instruments identical with above, but in a Strong, Polished Wood Box, fitted with divisions.

Price **2s. 3d.** per Box. { Price for orders of 6 dozen, **2s. 1½d.** per Box. („ „ 12 dozen, **2s.** per Box.

The *Journal of Education* says:—"We have received from the Educational Supply Association samples of their Boxes of Instruments for Geometrical Drawing. They are of English manufacture and are thoroughly reliable and very cheap. Unlike many of the low-priced instruments on the market, they are designed for use rather than ornament. The method of fixing a pencil of *any size* and length in the compass is particularly good. The set complies with all the regulations of the Oxford Locals Geometry Syllabus, and can be confidently recommended."

A Specimen Box will be sent post free on receipt of stamps for the advertised price.

SPECIAL BOXWOOD RULES.

Made exclusively for the Association, with bevelled edges, and markings guaranteed to be accurate.
These Rules are graduated in inches, tenths of an inch, centimetres, and millimetres on the front, and supplied as follows:—
6-inch Rule, Reverse plain, **2s.** per dozen; or with the Reverse marked as a Protractor, **2s. 6d.** per dozen.
9-inch Rule, Reverse plain, **2s. 6d.** per dozen; or with the Reverse marked as a Protractor, **3s.** per dozen.

CURRENT EVENTS.

Fixtures.

DR. EMIL REICH will address a joint meeting of the College of Preceptors and the Assistant Masters' Association on "The Introduction of the Study of General History into Secondary Schools, on the bases of Geo-Politics and Psychology," at the College of Preceptors on March 23, at 7.30 p.m.

* * *

M. GEORGE PETILLEAU will hold a "Causerie entremêlée de Récitations et de Monologues" before the Société Nationale de Professeurs de Français en Angleterre at the College of Preceptors on March 26, at 4 p.m.

* * *

THE KING will visit the University of Cambridge on March 1, on the occasion of the opening of the Law School and Squire Law Library, the Medical School, the Sedgwick Memorial Museum, and the Botanical Laboratory.

* * *

DR. STOPFORD BROOKE will lecture on "Shakespeare's Plays" at University College, London, on March 3, 10, 17, and 24, at 8 p.m.

* * *

AT the London School of Economics, Prof. Patrick Geddes will lecture on "Cities and their Culture-Resources, Actual and Incipient," on March 3, 10, 17, and 24, at 6.10 p.m.; Prof. Westermarck (Helsingfors), on "Early Custom and Morals," on March 1, 8, 15, and 22, at 6 p.m.; and Prof. Ernst von Halle (Berlin), on "Trusts, their Development and Influence," on March 8, 11, 15, and 18, at 8.30 p.m.

* * *

THE REV. THOMAS MOORE, M.A., will lecture on various points connected with the Education Acts, at the Church of St. Anne and St. Agnes (Gresham Street, E.C.), on March 2, 9, 16, and 23, at 1.15 p.m.

* * *

PROF. W. A. POTTS, M.D., M.R.C.S., L.R.C.P., will address the Childhood Society at the Sanitary Institute (72 Margaret Street, W.) on "The Protection of Feeble-minded Children during and after School Age," on March 3, at 8 p.m.

* * *

THE first International Congress on School Hygiene, with the patronage of his Royal Highness Prince Ludwig Ferdinand of Bavaria, M.D., and under the direction of a large International Committee representing every civilized country of the world, will be held at Nuremberg on April 4–9 (as already intimated) An English Organization Committee has been formed, with Sir T. Lauder Brunton as President, and Dr. James Kerr (Parkes Museum, Margaret Street, W.) as Honorary Secretary. Addresses will be given by Prof. Hermann Cohen (Breslau) on "What has Ophthalmology accomplished for School Hygiene, and what still remains to be done?"; by Prof. Axel Johannessen (Christiania) "On the present Position of School Hygiene in Norway"; by Dr. Le Gendre (Paris) "On the Personal Health of the Teacher, and its Influence on the Scholars"; by Dr. Sickinger (Mannheim) on "Organization of the Elementary-School Population according to the Natural Working Capabilities of the Children"; by Dr. Liebermann (Buda-Pest) "On the Duties and Preparation of the School Doctor"; and by Prof. Heuppe (Prague) on "Prevention of Infectious Diseases in School." Details will be discussed

Digitized by Google

in the sections. There will be a large and comprehensive Exhibition, including all that pertains to educational work and school structures and furnishing. The membership card costs one guinea.

* * *

THE University of Wisconsin will celebrate its jubilee at Madison in June this year.

Honours.

ON the occasion of the celebrations in connexion with the centenary of the death of Kant, the University of Königsberg has conferred the honorary degree of Doctor of Philosophy on Dr. Edward Caird, Master of Balliol, in recognition of his distinguished services to philosophy.

* * *

THE Senatus Academicus of the University of Edinburgh have resolved to confer the honorary D.D. degree upon the following:—The Rev. Andrew Hutton Drysdale, M.A., Morpeth; the Rev. John Anderson Graham, M.A., missionary, Kallimpong, India; the Rev. John Forbes Watson Grant, M.A., Edinburgh; and the Rev. Robert Dykes Shaw, M.A., B.D., Edinburgh.

And the honorary LL.D. on Samuel Henry Butcher, D.Litt., LL.D., lately Professor of Greek in the University; the Right Rev. John Dowden, D.D., Bishop of the Episcopal Church, of the diocese of Edinburgh; Sir Charles Norton Edgecumbe Eliot, K.C.M.G., H.M. Commissioner and Commander-in-chief for the British East Africa Protectorate, &c.; the Rev. Robert Flint, D.D., LL.D., lately Professor of Divinity in the University; Prof. Alexander Macallister, F.R.S., M.D., D.Sc., LL.D., Cambridge; Mr. John William Mackail, M.A.; the Right Hon. John Morley, O.M., M.P., F.R.S., LL.D., D.C.L., &c.; the Right Hon. Andrew Graham Murray, P.C., K.C., Secretary for Scotland; Sir George Reid, R.S.A., LL.D.; and Dr Hannis Taylor, Alabama, U.S.A.

* * *

THE Senatus Academicus of St. Andrews University has resolved to confer the following honorary degrees:—

LL.D. upon Erskine Beveridge, Dunfermline; Sir Charles Gage Brown, M.D., London; Prof. A. H. Keane, late of University College, London; Dr. John Newport Langley, F.R.S., Professor of Physiology, Cambridge; Sir John Leng, M.P., Dundee; and Hew Morrison, M.A., F.E.I.S., Librarian, Public Library, Edinburgh. And

D.D. upon the Rev. J. Vernon Bartlet, Professor of Church History, Mansfield College, Oxford; Rev. Alex. Gosman, Principal of the Congregational College, Melbourne; Rev. James Martin, Gask, Auchterarder; Rev. William Morrison, Edinburgh.

* * *

THE *Athenæum* hears from Montreal that M. J. J. Jusserand, French Ambassador at Washington, is to receive the honorary degree of LL.D. from McGill University in recognition of his services to English literature.

* * *

MR. H. J. MACKINDER, M.A., Director of the London School of Economics and Reader in Geography at Oxford, has been elected to a Studentship at Christ Church.

Endowments and Benefactions.

SOUTH WALES UNIVERSITY COLLEGE has received £25 from Sir R. Owen Anderson, Edinburgh, for the college building fund; an additional scholarship from the Brecon Scholarship Committee; and various valuable additions to the Museum of Natural History.

* * *

OXFORD CONVOCATION has accepted Mr. Philip H. Walker's offer of £1,200 for a studentship in Pathology. The studentship will be worth £200 a year, and tenable for three years. It is not confined to members of the University, and is open without limitation of age or sex.

* * *

BY the death of Mr. Edward Latham, a bequest under the will of the late Rev. Henry Latham, Master of Trinity Hall, falls to the University of Cambridge—namely, £2,841 Consolidated stock of the North-Eastern Railway, £1,291 Consolidated stock of the London and North-Western Railway, and 208 100-dol. Ordinary shares of the Canadian Pacific Railway, with £582. 15s. 8d. in cash. It will form "a fund for the purpose of giving assistance, under certain conditions, to members of the University or to their widows or children."

* * *

QUEEN'S COLLEGE, Belfast, has received £2,000 from Mr. Frederick Purser, Fellow of Trinity College, Dublin, to found a fellowship in memory of his brother, the late Prof. John Purser.

* * *

THE Aberdeen Divinity Professors, whose normal salary has for some time been falling short, are promised an augmentation under the will of the late Mrs. Stephen Wilson, North Kinmundy, Aberdeenshire—amount not yet stated.

* * *

MR. HAYS HAMMOND has given 50,000 dols. to the Sheffield Science School at Yale University, to complete the laboratory, to which he gave an equal sum a year ago.

* * *

THE University of California is reported to have received over £100,000 for a library, under the will of the late Mr. Charles F. Doe, of San Francisco.

Scholarships and Prizes.

TWELVE Junior Scholarships for boys, offered by the Drapers' Company, tenable in the day classes of the East London Technical College for two years (£15 a year while holder is fourteen to sixteen, £20 when over sixteen, together with exemption from the college tuition fees), and open to candidates between fourteen and sixteen on September 1, 1904, will be awarded on the result of the final examination for Intermediate County Scholarships commencing on June 27. Forms of entry from the Clerk to the Drapers' Company, Drapers' Hall, Throgmorton Street, E.C.; to be returned by May 14.

* * *

THE last day for receiving application forms for the L.C.C. Junior County Scholarships (to be awarded in July) is March 12.

* * *

UNIVERSITY COLLEGE, LONDON, announces for session 1904–5 (1) three Andrews Scholarships (entrance), £30 each—examination May 10, 1904; (2) West Scholarship in English, £30—examination September 21, 1904; (3) Campbell Clarke Scholarship in English Language and Literature, about £40—apply to Secretary of the College by April 30 (examination May 10, 1904); (4) Bucknill Scholarship (Medicine, entrance), £30 a year for four years; two exhibitions, 60 guineas each (Medicine, entrance); and two exhibitions, 80 guineas each (Anatomy and Physiology)—apply to Secretary by September 17 (examination September 20–21, 1904).

Appointments and Vacancies.

THE Provost and Senior Fellows of Trinity College, Dublin, will proceed to the election of a Professor of Botany in succession to Dr. E. P. Wright (resigned) on March 19.

* * *

THE Council of Trinity College, Cambridge, will elect a Birkbeck Lecturer in Ecclesiastical History on April 22. Graduates of Cambridge or Oxford are invited to apply to the Master of Trinity by March 22.

MR. E. B. SARGANT has resigned the Directorship of Education in the Orange River Colony to become adviser on education to Lord Milner.

* * *

DR. H. KENWOOD has been appointed Professor of Hygiene at University College, London, in succession to the late Prof. Corfield.

* * *

MR. C. H. REILLY, M.A., Lecturer at King's College, London, has been appointed Roscoe Professor of Architecture in Liverpool University, in succession to Prof. Simpson.

* * *

MR. GAILLARD LAPSLEY, Lecturer on History at Pennsylvania University, has accepted a Lectureship and Fellowship at Trinity College, Cambridge.

* * *

MR. J. J. E. DURACK, B.A. (Sydney). B.A. (Research, Camb.), has been appointed Demonstrator in Natural Philosophy at King's College, London.

* * *

THE REV. DONALD JONES, B.D., Lecturer at Lichfield Theological College, has been appointed Principal of Bede College, Durham. He is succeeded by the Rev. C. A. Cherrington, B.A., assistant master and chaplain of Birkenhead School.

* * *

MR. WILLIAM SHARPE WILSON, M.A., youngest son of a distinguished teacher now retired (Mr. Robert Wilson, M.A., Deer, Aberdeenshire), and Lecturer in English at the Emperor Alexander's Institute of Engineers and English master at the two foremost classical schools in St. Petersburg, has been appointed Lector of English in the University of St. Petersburg, in succession to Mr. Charles E. Turner, who held the post for forty years.

Literary Items.

MR. T. FISHER UNWIN appeals to such as possess "private documents and diaries illustrative of the bad old times, or would write down in simple language their recollections," to send them to him for incorporation in a projected volume. "Tradesmen's bills and private housekeeping accounts of the 'Hungry Forties' would be of interest and useful for comparative study." Any documents sent to Mr. Unwin would be copied and returned by him if desired.

* * *

MR. HENRY FROWDE is just issuing a volume on "The Titles of the Psalms," in which Mr. J. W. Thirtle claims to produce the lost key to their interpretation. The book "is believed to represent an entirely new departure in Biblical criticism."

* * *

MESSRS. A. & C. BLACK will publish during the month Mr. Dudley Kidd's book, "The Essential Kafir," with 100 page illustrations "taken in Kafir kraals far removed from civilization." Mr. Kidd has spent a dozen years among the various Kafir tribes, and the work is opportune.

* * *

MR. KEITH THOMAS announces a volume on "Hellenism and Macedonia" by Dr. N. Kasasis, Rector of the University of Athens, who was recently here to represent the state of affairs in Macedonia. Dr. Kasasis treats the Macedonian question as only one part of the question of Hellenism.

* * *

THOSE that like their novels to keep them on the tenterhooks of expectation will be gratified to learn that Mr. Fisher Unwin is publishing "The Filigree Ball," by Anna Katherine Green—"a mystery equally difficult of solution" with the author's "Leavenworth Case."

* * *

MR. ALEXANDER GARDNER, Paisley, announces an English version of George Buchanan's "Baptistes" (John the Baptist) by the Rev. A. Gordon Mitchell, the minister of the parish where Buchanan was born (Killearn), and translator of Buchanan's "Jephthes."

* * *

MESSRS. CASSELL have permanently enlarged *Work* to 32 pages, without altering the price—good news to all interested in handicraft.

* * *

WE welcome the *Cambridge University Press Bulletin* of notes on books. The first number (January 15) is introduced by a very interesting "Historical Sketch of the Cambridge University Press" by Mr. J. W. Clark, M.A., Registrary of the University.

* * *

THE *Extensionist* (3d., No. 1, February) reports in full the inaugural meeting of the Central Association of University Extension Students held on January 6. It "will probably be published quarterly." We hope it will find encouragement to appear at shorter intervals.

* * *

SIR ISAAC PITMAN & SONS have started (February 17) a new penny weekly journal, the *Teacher*, devoted to primary education. It proposes to aid teachers "not only in preparing for examinations, but also in the practical work of the school." It promises well, and we wish it all success.

* * *

THE first number of *Technics* (January) offers varied and substantial matter, with liberal and effective illustration. It gives high promise of real usefulness to technical students and of interest to general readers. "Charlottenburg" is described (with good illustrations) by Prof. Dalby. In the winter *Semester* of 1902–3 there were 4,378 students and hearers, and an actual teaching staff numbering 402.

* * *

THE *Contemporary Review* for February contains Sir Oliver Lodge's Presidential Address to the Teachers' Guild (January 12).

* * *

THE *English Illustrated* of February—a charming number—has an interesting article on "The Educational Ladder" (with illustrations) by Hugh B. Philpott. The "Birthday Portraits" of George Meredith, Dr. Garnett, and Dr. Furnivall are very good.

* * *

THE *Modern Language Quarterly* completes its sixth volume, "viresque adquirit eundo."

* * *

IN the February issue of *Cornhill* Prof. Tout gives a comprehensive and instructive review of the life and work of Mommsen. We quote one far-reaching (though poorly expressed) remark: "The habit of relying upon even the best of modern books as infallible or inspired is not one calculated to promote intelligent study, and entirely fatal to any tendency towards first-hand original investigation."

* * *

Page's Magazine (February) contains an interesting article by Mr. C. Alfred Smith, B.Sc., A.I.E.E., describing the power station of Birmingham University, with plenty of good illustrations. A second paper will deal with the foundry and forge, the huge laboratories and workshops (main buildings), and the detail equipment of the mining and metallurgical sections.

* * *

MATHEMATICIANS will be interested in two papers in the *School Review* (University of Chicago Press) for December last on "Mathematics and the Co-ordination of Mathematics and Physics in Secondary Schools" (with racy discussion) and "The Unification of Mathematics in the School Curriculum."

* * *

THE January number of the same able review is filled

It is announced that twenty-four teachers (all women) lost their lives in the recent fire at the Iroquois Theatre, Chicago, and six more are reported missing.

THE TEACHING OF THE MOTHER TONGUE.

By Prof. J. W. Adamson, B.A.

At the Evening Meeting of the members of the College of Preceptors on February 20, the Rev. J. B. Blomfield in the Chair, Professor Adamson, of King's College, London, read the following paper:—

It is a commonplace of psychology that familiarity with a system of general signs, such as language, is essential to mental development in its higher aspect, and it is easily seen that the child who has learnt to use his native speech has appropriated, however unconsciously, much of the garnered knowledge of his people, their modes of thought, and schemes of ideas. On these grounds alone it would seem that the claim of the mother tongue to foremost rank as an instrument of education is inexpugnable. Yet, in fact, modern Europe waited till the seventeenth century (a veritable seed time of fruitful educational ideas) before there arose an effective demand for the admission of the vernacular into the sphere of school studies. The vigorous sense of nationality which is reflected in the literary achievements of England and of France in that century, and the instinct which then established the great literary societies dedicated to the mother tongue in Italy, France, and Germany, reappear as characteristic of the educational reformers of the time in their demand that school-children shall be *taught* their native speech. At the century's beginning a practical schoolmaster like John Brinsley urges the point, and much of the charlatan Ratke's right to fame rests upon his plea that every German child shall remain at school until the ability to read and write German is acquired. Comenius repeats and reinforces the plea, giving it a general application; the chain is continued in France by Messieurs of Port Royal, and later in Germany by Thomasius and Francke. During the last decade of the century John Locke reproved his countrymen for their neglect of the English language and showed them how it might be taught.

Notwithstanding his prepossessions, Locke devotes more attention to method in its application to language teaching than to any other branch of knowledge, and, the serious omission of literature excepted, his remarks on the teaching of the mother tongue are especially full and of the greatest value for practice at the present moment.*

Our subject may be conveniently considered under the divisions Composition, Grammar, Reading, and Literature, although, measured by the time to be devoted to them, these are not all of equal rank.

English Composition.

The term "Composition" is to be interpreted freely as the framing of articulated language, spoken no less than written. The drawing of an arbitrary line between the two forms has resulted in making written composition one of the most unsatisfactory subjects of school study. The reason is simple: once regard composition as essentially a pen-and-ink business, and its postponement till the pupil reaches the age of eleven or more is likely to follow. If success is to be attained, composition must begin in the *oral* exercises of the kindergarten and of the very youngest forms of the school. It is matter of common experience that a child who begins formal composition late, and as a thing written, will, when writing, violate the fundamental rules of grammar and the principles of even the baldest kind of expression. On the other hand, the convenience and adaptability of the oral exercise render it possible to correct the most serious errors and to form some standards of speech before writing begins. Locke suggested that, as the art of speaking well is to be got by practice,

> "it might not be amiss to make children, as soon as they are capable of it, often to tell a Story of any Thing they know; and to correct at first the most remarkable Fault they are guilty of in their Way of putting it together. When that Fault is cured, then to shew them the next, and so on, till one after another, all, at least the gross ones, are mended. When they can tell Tales pretty well, then it may be the Time to make them write them. The Fables of Æsop, the only Book almost that I know fit for children, may afford them Matter for this Exercise of writing English, as well as for reading and translating, to enter them in the Latin Tongue."

The procedure in these first attempts at composition could not be better described: first, the subject-matter must be quite familiar; secondly, the exercise is to be entirely by word of mouth; and, thirdly, faults are to be corrected systematically, beginning with the most general. Shyness and inability to keep ideas steadily before the mind are the chief hindrances at the outset, even when the matter of the story is well within the children's powers, and it is, therefore, a good plan to begin with what is called "Reading a picture." A large picture (lantern-slides answer admirably) is set up before the children, who are encouraged to describe what is portrayed; the versions are compared, some faults are noted at more or less length, others just glanced at, and the teacher gives a "fair copy," which he may or may not write upon the blackboard, as circumstances direct. The picture should represent a familiar scene, or, at least, its component parts should be familiar, and its subject of a kind to appeal to children. The great thing is to stimulate talk and make it easy; from that point of view pictures of movement are usually more easily interpreted, and lend themselves to narrative, which is an easier *genre* than description.

"Reading a picture" is for beginners; those who have gained a little facility may repeat a story which has been told them, or which they have read; older children may be asked for an oral account of a game, a walk, of a book read, or of a lesson heard. In all cases the teacher will find it helpful to take written note of the errors which are common in the narratives of different children, with the view to obeying Locke's injunction. Connected speech might be made more the habit of the school than is often customary, and the opportunities for oral composition correspondingly multiplied. For example, the indispensable repetition of work might in a measure be secured if it were the rule to begin a lesson by requesting two or three scholars to state the substance of the previous corresponding lesson; an oral summary by pupils at the close of a lesson is perhaps less unusual. When the practice of foreign schoolrooms in this respect is contrasted with our own, the latter is usually explained by the assertion that *by nature* the English boy is less articulate than the French or German. But, as the English youngster is generally vocal enough in the playground, and forcible also there on occasion, the explanation seems to be one of those convenient generalizations made expressly to palliate our own mistakes.

Practice in properly articulated speech, examination in and repetition of lessons, are not the only advantages accruing: oral summaries so

* See "Thoughts on Education," section 189, and compare sections 168, 171, 172.

Digitized by Google

stated by the pupils discover their point of view more effectively than can a jerky, monosyllabic cross-examination, besides giving them an active share in the work and the teacher's voice a salutary rest.

Children who have been trained to oral composition from the beginning can dispense with those very dull and purely formal exercises with which many text-books would have the scholar commence written composition. Thus, grammatical subjects, for the most part quite unconnected, are stated, and the pupil is asked to add appropriate verbs or predicates, or *vice versa*. Sometimes a hotch-potch of sentences is printed, the exercise consisting in the insertion of pronouns or other "parts of speech." Many of the points raised by devices of this sort will have been anticipated and dismissed in the oral work

The subject-matter of these first written exercises will not greatly differ from that of the purely oral stage, except, perhaps, that the repetition of school lessons will be more frequently attempted, in order to associate training in expression with as much of the school work as may be contrived. The leading rule is that the topic proposed should be familiar, so that the stress of the task shall lie not in what is to be said, but in the manner of saying it. Some teachers read an anecdote or short story to the class, and require the pupils to reproduce it on paper; but the plan usually fosters a slavish, literal imitation in the children, who do their utmost, first, to retain as many of the actual words of the book as they can, and, secondly, to repeat these on paper, without much regard for the scheme of the composition as a whole. Children share with most illiterates an almost superstitious respect for printed matter as such: they are less likely to make the mistake of verbal imitation when the story is told orally by the teacher in his own words. It may seem inept to turn a good jest into *corpus vile;* but the reiteration, or attempted reiteration, of a tale whose point turns upon a joke often gives glimpses into a pupil's mind which a whole term of demure "schooling" would fail to offer. Such revelations are, surely, precious by-products of the process!

A story carries its own arrangement with it, and a lesson repeated in the order of its delivery would conform to its scheme in the teacher's mind; but when exercises not narrative are set the question of arrangement of matter, however familiar, becomes an essential part of the composition. When the children are first called upon to undertake work of this kind a few lessons should be given at the blackboard, teacher and class working together, first, to set down a skeleton outline, and, next, to fill this in; later, the children may be helped by the outline alone written upon the blackboard.

Locke glanced at one of the most common defects of children's writing when he marked as a stage in their advance the power "to join in a continued coherent Discourse the several Parts of a Story, without bald and unhandsome Forms of Transition (as is usual) often repeated." Probably most teachers are familiar with the young writers who cover their papers with chains of co-ordinate sentences and phrases whose links are made of the words "And so," or an equivalent. The remedy lies in requiring short sentences with a sparing use of conjunctions at first. When the scholars can readily express themselves in this *staccato* fashion a lesson at the blackboard should show how several short sentences may be woven into a period. At this stage help may be got from grammar and from formal exercises designed to drive home the use of certain locutions. For example, the boy finds it anything but easy to employ pronouns without ambiguity, and the teacher will be assisted in clearing up the difficulties if the pupil knows something of the corresponding grammatical terminology. Again, failure to introduce appropriate conjunctions suggests as a remedy those formal illustrative exercises whose purpose would now be obvious to the pupil, whereas they would only repel him if proposed independently and at the outset. Similarly, at a later stage exercises in the nature of "missing word" puzzles may be profitable, if set only occasionally: passages of some length, not unrelated sentences, are put before the children, with blanks in which are to be written the right epithet, connective word or phrase, and so on.

So far, our chief concern has been expression, invention being at first attendant on that. Locke has a lively passage in this connexion which one may be pardoned for quoting:

> "Do but consider what it is, in making a *Theme*, that a young Lad is employ'd about; it is to make a Speech on some Latin saying; as *Omnia vincit amor;* or *Non licet in Bello bis peccare*, &c. And here the poor Lad who wants knowledge of those Things he is to speak of, which is to be had only from Time and Observation, must set his Invention on the Rack, to say something, where he knows nothing; which is a sort of *Egyptian* Tyranny, to bid them make Bricks who have not yet any of the Materials. And therefore it is usual in such Cases for the poor Children to go to those of higher Forms with the Petition, *Pray give me a little sense;* which, whether it be more reasonable or more ridiculous, it is not easy to determine. Before a Man can be in any Capacity to speak on any Subject, 'tis necessary he be acquainted with it; or else it is as foolish to set him to discourse of it, as to set a blind Man to talk of Colours, or a deaf Man of Musick. And would you not think him a little crack'd, who would require another to make an Argument on a moot Point, who understands nothing of our Laws? And what, I pray, do School-boys understand concerning those Matters which are used to be proposed to them in their *Themes* as Subjects to discourse on, to whet and exercise their Fancies?"

Locke is speaking of the theme in Latin, but his strictures apply quite as well to all who, being "a little crack'd," require children to write upon abstract topics and other matters outside their knowledge and sympathies.

Composition need not be confined invariably to prose: a study of the mechanism of a verse such as would from time to time occur in the older pupils' literature lesson might occasionally be closed by the request that all should try to write a similar verse. Failure would at least put the writers in a position partially to appreciate verse which is good.

Paraphrase may be easily overrated as an aid to independent expression, while its effects on taste may be the reverse of desirable; there is a great deal to be said in favour of Ascham's opinion that

> "such turning of the best into worse is much like the turning of good wine out of a fair sweet flagon of silver into a foul musty bottle of leather, or to turn pure gold and silver into foul brass and copper."

It is useful, no doubt, as a test of the writer's grasp of the original, and it exercises him in the use of synonyms and so helps him to *copia verborum*. But the price will be much too high if it makes him believe that expression is indifferent and that his own brass and copper are equivalent to the fine gold of his copy. It may be thought that the argument suggested a moment ago for inducing boys to pen bad verse tells also in favour of inadequate paraphrase; but here the difference of form (paraphrase usually being in prose and of verse) is, I submit, material. Paraphrase is least objectionable when it is oral and not too premeditated.

English Grammar.

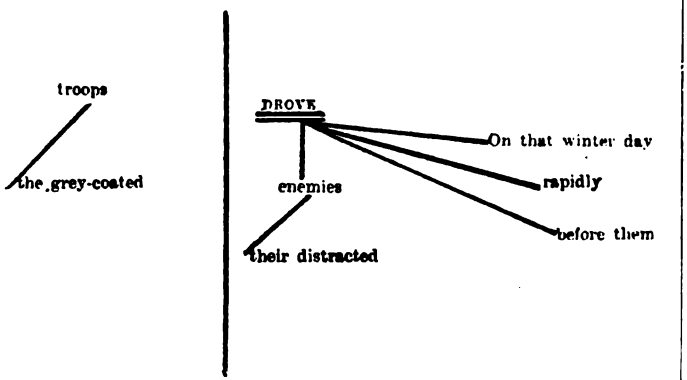
Should the vernacular grammar be included as part of the teaching of the mother tongue? If Locke were followed here, it should not. "There is more stir a great deal made with it than there needs," says he, "and those are tormented about it, to whom it does not at all belong: I mean Children, at the Age wherein they are usually perplexed with it in Grammar Schools." The direct reference is again to Latin; but the context shows that the remark applies to grammar study in general. This is to ignore that grammar, as a body of general principles which *may* be established inductively, is capable of yielding gymnastic similar to that which science affords, and with the advantage in the case of grammar that it needs no laboratory, and that the teacher has ample apparatus who is equipped with chalk, a blackboard, and brains. Once established, its principles can be used as criteria in dealing with composition exercises; for pupils whose study of language will extend beyond the native tongue there is much to be said in favour of giving them their earliest notions of the philosophy of speech through the familiar idiom, even where (as in the case of English) the grammatical field is restricted, and no very effective advance can be made until comparison with the forms of another language is possible.

But experience should warn us that the teaching of grammar may be made deadly dull. For example, little interest or intellectual nutriment could be derived from the old and possibly obsolete plan of making children learn from a grammar book rules which they were afterwards to apply in parsing. Of the many defects of the plan the most serious was its failure to take advantage of the boy's not inconsiderable knowledge of his own language. At the age when grammar lessons are possible, he is familiar with, and can use as an instrument of expression, the sentence, which is the true unit of thought; it is more in accord with his own spontaneous process of learning to commence with a whole, the sentence, and pass thence to the parts, the single words, than to follow the contrary direction. The rule of instruction, "Analysis first, then synthesis," is of general application: in this particular case it means that grammatical analysis should be made the basis of parsing. But teachers are so far agreed in opinion on this head that it is superfluous to labour the point.

Analysis of sentences replaced the older parsing drill as the earlier exercise, partly on the ground that the latter was mechanical: it is not always remembered that grammatical analysis may easily minister to the same Juggernaut of the class-room. Text-books almost invariably suggest that the sentence should be dismembered and the scraps stowed in certain rectangular pigeon-holes labelled "subject," "predicate," "extension," "completion," &c. Still worse, pupils frequently begin such an exercise by drawing and labelling their pigeon-holes before examining the sentence to be dissected; then, if labels and sentence do not correspond very well, the rectangular arrangement on the boy's paper tends to become an inflexible mould into which the unlucky phrases must be run. The effect is to stereotype the pupil's notions of a sentence, and he will identify, say, the indirect object, on grounds as purely mechanical as those on which his grandfather selected a possessive case Each sentence should be considered and treated on its merits, and the pupils should be persuaded that the sentence in general is a living expression of variable form, and not a dead uniformity. A flexible *schema* which makes this possible may be seen in Sir Joshua Fitch's "Lectures," the parts of the sentence and their descriptions being arranged in two columns after the manner of a parsing-table.

For graphic self-explanatory work at the blackboard the following device is recommended; it is intended to convey to the eye the interdependence of the members of a sentence, and the relation of each to each. No technical terms are employed, and no superfluous divisions are made: features which do not correspond to a particular sentence are, in that case, omitted. For example, the sentence: "On that winter day

the grey-coated troops rapidly drove their distracted enemies before them" would stand thus :—



The verb, as the pivot of the sentence, is made prominent. The long vertical line divides subject from predicate, the short vertical line unites the transitive verb with its object; an oblique line sloping from left to right indicates a phrase in adverbial relation, a similar line sloping from right to left marks the adjective, or adjectival phrase—conventions soon learned and easy to remember. Before a boy undertakes a parsing exercise he should analyze the sentence in some such graphic fashion as this at the head of his paper, or on the blackboard. If he cannot analyze his sentence, he cannot parse its words; if he analyzes it *so*, the common vexatious blunders in parsing are inexcusable.

When the value of grammar as mental gymnastic is in question it is customary to say that the study secures in this respect for young pupils what formal logic makes possible for their elders. But it must be said that grammar, as frequently taught, encourages very illogical habits of thought. Such teaching is marked, for example, by entirely premature desire for definition, oblivious of the truth that definition is only adequate when it represents considerable knowledge: the consequence is that pupils are made to learn either pretended definitions ("a noun is a name of a person, place, or thing") or such entirely inadequate definitions as those which commonly do duty for the verb. So long as children's knowledge is very imperfect and their powers are very immature, so long may they be excused from trying to define in set terms.

An even greater evil than premature definition is the over-classification which is a craze with some text-book writers. The "potential mood" does not crop up so often to-day as in the past: one used to wonder why, if "Tom can work" is in the potential mood, "Tom cannot work" was not in the impotential mood. But here is a classification of adverbs, set out in the majesty of Roman numerals and heavy type, which may be seen in a text-book at this moment in use:—"Adverbs are of I. Time, II. Place, III. Manner, IV. Degree, V. Measure, VI. Number and Order, VII. Mood—(1) Affirmative, (2) Negative, (3) Probability and Doubt—VIII. Cause. Interrogative Adverbs, many Compound Adverbs." Passing by the doubtful nature of this division when judged by logical standards, what possible advantage can accrue from making children learn it? Why not call the thing an "adverb," and have done with it?

The grammarian's mania for labelling and classifying is evident also in the attribution of "person" to nouns, albeit these are invariably said to be of the "third person," a third which, however, does not imply a first or a second. Again, the beginner is almost always invited to commit the fallacy of cross-division by making three classes of nouns—common, proper (*i.e.*, not common), *and abstract*. In this case, too, the youngster usually proposes to himself a question in metaphysics in order to determine whether a given noun is abstract or not. If grammar is to make good the claim to be a training ground for serious thinking, it must forgo trivialities such as these.

What place should historical English grammar occupy in the school? Practically, of course, this question, like so many others, finds its answer in the circumstances of the individual school, the public examinations with which it is associated, the after-career of most of its pupils, and the like. But where the teacher is a free agent it seems best to confine the regular systematic study of English grammar on its historical side to those pupils for whom "scholarship" is a practicable goal—that is, for the few. But all may derive both interest and concrete profit from being told of some of the conclusions at which scholars in this field have arrived. It is therefore very advisable that the teacher should be a student of historical English grammar; I would like to add that a knowledge of Latin grammar should be compulsory on all teachers of vernacular grammar, not so much for the sake of the knowledge itself as for the standard of grammatical science and facility in its use which ought to be implied.

English Reading.

From a paper on the teaching of the mother tongue it is impossible to omit all reference to the child's first steps in the art of reading, although the subject requires a paper to itself. The special difficulties encountered by the English child were very fully set forth some forty years ago by Prof. Meiklejohn; it is almost as long since he and Mr. Sonnenschein showed how these difficulties may be minimised. Briefly, the great hindrance to the child's rapid and intelligent progress is our anomalous spelling, more particularly of the common everyday words which belong naturally to a child's vocabulary. Messrs. Sonnenschein and Meiklejohn met this, in their "English Method of Teaching to Read," by a careful selection and arrangement of words consistently spelt: these words constituted the language in which the beginner dealt at first, words of irregular spelling being introduced gradually. Expectation of the contrary notwithstanding, the result was not artificial: the language was natural and adequate, and the whole course, anomalies included, was comprised in three thin booklets.

Spelling has acquired a fictitious importance which invites the assertion of heterodox opinions. As a usual thing, correct spelling is the mark of the literate person; incorrect, of the illiterate: he who reads and writes much rarely spells amiss. If a boy, whether at Eton or in a Board school, is illiterate, it is a comparatively small, nay a natural, thing that he should spell badly: our anxiety ought to be concerned not with his spelling, but with his illiteracy. Make him read, make him write; but to help the illiterate to conceal his unregenerate state by teaching him spelling, as such, looks like a species of dishonesty. It is not a contradiction to the foregoing to urge that, save as an examination test, no passage should be set for dictation which has not been previously prepared as to its spelling: Cicero says somewhere that faults as well as correct forms are ingrained by exercises.

Word building can furnish but small assistance in the teaching of spelling, since it deals with regular forms whose spelling is, as a rule, not hard to come by; but, as showing how words acquire precise modification of meaning through definite change of form, the practice has its place in teaching language, the vernacular as well as other. There is scarcely occasion, however, for the many manuals of the book maker: they are liable to several obvious abuses; for most teachers they are superfluous, and word building is best learned, not as one more distinct "subject," but *obiter*, during lessons on composition, reading, grammar, and so on.

It is to be regretted that the overcrowded time-tables of most schools do not permit practice in the art of reading aloud to pupils above the youngest. It may be made a valuable auxiliary to acquiring facility, variety, and appreciation in using the mother tongue if the reading matter be of the right kind. In any case, the bad phrasing and breathlessness so often heard when older pupils are asked to read might be prevented if, when they have occasion to read aloud from text-book or exercise, it should be understood that good reading is invariably expected.

Without question many of the school reading books in circulation to-day are far less suitable for their special function than were the "readers" of twenty or more years ago. Some, otherwise suitable, are swollen in bulk by pictures of little merit, on which the children bestow no more than the brief, cursory glance which they deserve. Then there is a whole class of school readers whose employment is doubly mischievous—namely, the so-called "science" readers and others which deal with *Realien* of a scientific, or quasi-scientific, sort. These commonly teach their subject in the way which is not the best, thus proving foes in their own household, while they are intruders in the domain of literature, robbing children during the reading lesson of time and opportunity rightfully belonging to letters and not to science. Offenders of a similar kind are the periodicals, mere *réchauffés* from the newspapers, which are said to be suitable for school use. The art of reading aloud, as part of the instruction in the mother tongue, is surely before all things literary; and the reading matter intended as the exercise ground in the art should belong to sound literature, and not to Mr. Blank's lucubrations on carbon dioxide or the last opening of Parliament. Where the scholars come from bookless homes, or belong to families destitute of literary culture, the school fails in a manifest duty if it keeps them poring over reading matter of the kind to which allusion has been made.

This is a subject which seems to touch the credit of teachers very closely. The well nigh universal habit of spending much time daily in looking at printed matter is a monument to the success which has followed instruction in reading. But is it a monument of which we may legitimately feel proud? When the stuff commonly read is scrutinized, how much of it advances knowledge or culture or reflects the interests or amusements of a really civilized people? At its best such stuff serves as an anodyne to thinking—a function shared by dram-drinking; at its less than best it inspires most kinds of vulgarity and meanness. It is very significant that the generation which consumes garbage so freely has debased the word "literature" to a synonym for printed matter. The teaching of the mother tongue is frustrated by reading of the kind in question, and the selection of reading books, from which many scholars get their earliest ideas about books in general, demands very conscientious care. Thought and graceful expression are, of course, impossible in primers and books made for the mechanical stage of learning to read: they ought to be required above that level.

English Literature.

The formation of good literary taste in the pupil—indeed, of æsthetic taste generally—is on the educator's side largely a matter of suggestion; he provides abundant opportunity for contemplation of the good and excludes, as far as he can, contemplation of the bad. Many a child has developed the sense of literary appreciation through free access to a good library: a school which can permit its pupils to browse at times amidst

Digitized by Google

a collection of standard books of romance, travel, history, biography, and poetry will thereby do more for literary culture than will many set lessons having that purpose in view. Nor need the books be chosen expressly from what is thought to be the child's point of view; instinctively he reaches out to the years beyond his own, and, provided that there is *a* meaning for him in what he reads under the conditions supposed, we need not be too anxious as to his understanding his author. After all, the range of a great writer is not to be straitly defined: who shall say that there is no room within it even for the little child's interpretation?

Growth of literary appreciation as the consequence of having free access to good books is, of course, too casual to allow the schoolmaster to trust to it alone. For the few it is enough; the many require set opportunities and direct teaching if they are to attain a modest, serviceable level of regard for literature. In some schools these gather round the reading book; in others they are concentrated about the classics set for public examinations. It is to be feared that public examining bodies do not sufficiently realize their duties and opportunities in this respect; otherwise they would take pains to vary the kind of reading prescribed and look for knowledge of large masses of the author's text rather than acquaintance with the book maker's notes. Shakespeare is frequently set to children whose age is too young, and he is set too often to the exclusion of other and standard writers who appeal more to many boys and girls; worst of all, he is read in over-annotated editions, many of which are reflections of the traditional mode of editing a Latin or Greek classic for school use. If the study of English literature is to form an effective part of the English child's instruction in the mother tongue, and if English literature is to confer upon English children in general the benefits bestowed by humane letters, then we must frankly recognize that not all boys and girls are intended by Nature or force of circumstances to become philologists or scholars in the technical sense. The many can only get the training which is desired for them by dint of reading large tracts of their authors, such notes alone as are absolutely needed for elucidation accompanying the text. In the case of some authors, of whom Sir Walter Scott is one, the most effective editing for school use would consist in directing scholars to begin not at chapter i. (still less at the preface), but at chapter ii. or thereabouts; the best editor, as well as annotator, for school-children should be their own teacher. With discretion, he may also be their best critic and æsthetic guide. The qualification is necessary, since these things only too readily lend themselves to cant; but an honest and profitable conversation between teacher and class is imaginable where the boys tell the teacher what most pleases them in their classic, and he, in turn, makes the like confession to them. Older pupils may state the grounds of their pleasure, thus co-operating with the teacher in establishing standards of taste in their minds.

If the publishers and book makers of the past twenty years have not improved the school reading book, they have given us a number of extremely well chosen anthologies of English verse suitable for school use, a service which teachers of an earlier generation would have much appreciated. Happily, all learning by heart has not quite departed from the schoolroom, and these books give abundant material for recitation, a practice of great value in teaching the mother tongue. What has been said about English school classics as a whole of course applies to passages selected for recitation. A not uncommon mode of expounding a passage chosen for the purpose is to go through it piecemeal, giving synonyms for the difficult words, but ignoring the *tout ensemble*. The chief difficulty the boy often experiences does not reside in individual words, but in the character, drift, and scheme of the composition in its entirety. Thus it is often best to open an exposition lesson by treating the gist of the passage at some length: it will be an added advantage in this connexion if the teacher has the art of reading aloud.

"This I find universally neglected," said Locke, "and no care taken anywhere to improve young Men in their own Language, that they may throughly understand and be Masters of it. If any one among us have a Facility or Purity more than ordinary in his Mother Tongue, it is owing to Chance, or his Genius, or any thing rather than to his Education or any Care of his Teacher."

The twentieth century re-echoes the complaint of the seventeenth. At a recent conference of educational associations many speakers declared that ignorance of the mother tongue prevented the scholarship winner from the elementary school taking that place in the secondary school which was expected of him; on the other hand, we are told officially that in not a few secondary schools "the boy has no acquaintance with the English language as used by those who know how to use it, and it is not surprising that when he attempts to express himself on paper or orally he has little skill or facility." (Mr. Headlam's Report.)

Yet it is not so in French or German schools, whether primary or secondary. Much of the foregoing paper is no more than an inadequate description of what is done daily in the French schoolroom, with admirable results, as is generally admitted. Until the experiment has been fairly tried and the English boy has been subjected to a similar regimen, we ought not to acquiesce in the assertion that by nature he is less capable of learning to use his mother tongue with ease and precision than are his young friends beyond the Channel.

Dr. R. P. Scott considered that paraphrase was a very powerful instrument in the hands of the teacher for instilling into the minds of his pupils a sense of literary appreciation, provided that great care were exercised in the selection of passages. The piece to be paraphrased should be of a high standard of literary merit, and before attempting the paraphrase the pupils should be made familiar with the idea in the mind of the author and should steep themselves in the atmosphere of his thoughts. After very carefully correcting the exercises the teacher should, if possible, take each pupil individually and explain to him where he had failed to keep in touch with the thought of the writer. This opportunity of going over the work of the pupil after the teacher himself had thoroughly mastered the difficulties, and of explaining where the pupil might have translated the author better, was an effective means of establishing a personal touch between teacher and pupil. If a teacher selected a passage from Milton for paraphrase, he would not, of course, expect his pupils to render Milton in return, but it would be found that the amount of Milton which the pupils had learned in the process would be of considerable value. As a means of encouraging literary effort on the part of his pupils he had found it very useful to keep what he called a "golden book," in which paraphrases of exceptional merit were recorded. With regard to the question of spelling, he thought that in the case of most boys the best thing to ensure correct spelling was plenty of good reading.

Mr. Langler said that two things were necessary to enable a pupil to make a suitable paraphrase: he must be thoroughly acquainted with the subject dealt with in the passage, and he must have a good vocabulary at command. Oral lessons in such subjects as Nature study afforded a good opportunity for acquiring a large vocabulary and the power of expression.

Mr. Potter thought that the chief advantage of ability to paraphrase was that it enabled a pupil to render with much greater freedom a translation into English from a modern foreign language.

Mr. Wood said that his own opinion as to the depreciation of the literary value of English Readers coincided with that of the lecturer. With regard to the question of paraphrase he contended that the higher the literary merit of a passage the more difficult it was to paraphrase it.

Miss Salter said that in teaching spelling she had found it a good plan to divide words into syllables and make the pupils pronounce each syllable distinctly, care being taken that the pupils understood the meaning of the words.

Mr. Gibbard agreed with the lecturer that the reproduction by the pupils of a story related by the teacher formed a very effective method of teaching English composition. He considered that Science Readers were quite unsuitable for use as ordinary English Readers, as they contained a number of scientific terms the explanation of which occupied considerable time and properly belonged to the science lesson.

Professor Adamson having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

ADAM MARTINDALE.

A COUNTRY SCHOOLMASTER OF THE COMMONWEALTH TIMES.

By Prof. Foster Watson, University College, Aberystwyth.

I.—Adam's Schools and Schoolmasters.

Adam Martindale's Autobiography is a charming book, and ought to be better known. It was first published from the British Museum MSS., in 1845, by the Chetham Society of Manchester, under the sympathetic editorship of Canon Parkinson.

It is, perhaps, easier to learn of the lives of great reformers than of those who manfully lived along the current of the age. It is particularly difficult to find details of the struggle to live in the work of teaching in such an age as that of the great Civil War. So forcible and incisive is Martindale in the account he gives of his career that it will be possible to give almost entirely in his own words the parts that relate to his own school-days and his own schoolmastering experiences.

Martindale's father was a yeoman who got into difficulties through becoming surety. The sketch of his life is, therefore, particularly interesting as showing the sort of bringing-up which poorer people were able to give their children. The following is Adam Martindale's quaint description of his life from the sixth to the seventh year of his age:

When I was near six years old, one Anne Simpkin, who was one of my sureties at the font, being grown low in the world, but not in goodness, out of a real principle of conscience to perform her promises and engagements for me at my baptism (as I verily believe), bestowed an A B C upon me; a gift in itself exceeding small and contemptible, but, in respect of the design and event, worth more than its weight in gold. For till that time I was all for childish play, and never thought of learning. But then I was frequently importunate with my mother that had laid it up (thinking I would only pull it in pieces) to give it into mine own hands, which, being so small a trifle, she accordingly did; and I, by the help of my brethren and sisters that could read, and a young man that came to court my sister, had quickly learned it and the primer also after it. Then of mine own accord I fell to reading the

Digitized by Google

Bible and any other English book, and such great delight I took in it, and the praises I got by it from my parents, which preferred my reading before any other in the family, that I think I could almost have read a day together without play or meat, if breath and strength would have held out; and thus it continued to the end of the first seven years of my life.

In 1630, when Martindale was seven years old, he was sent to the Free School at St. Helen's, in Lancashire—two miles from his home. This distance he had to travel twice a day, but even at that early age he counted it nothing, such was his "innate love to learning." He had many hindrances in his school course. To quote his own words, these were:

First, many teachers (five in fewer years). Secondly, these none of the best. Thirdly, a tedious long method there and then used. Fourthly, dullards in the same class with me having power to confine me to their pace; for when the lowest, who was presumed to be weakest, said *Satis*, the ablest must take no further. Fifthly, many sad providences making great gaps in this seven years, as will appear hereafter.

It is difficult to find descriptions of country schoolmasters of the period, and Martindale's account is interesting. I give it at length:

My first master was a young ingenious spark having a good full school, but so bad a husband [manager] that he quickly spoilt all and left us.

A worse followed him, viz., an old humdrum curate, that had almost no scholars, nor deserved any, for he was both a simpleton and a tippler. He and I parted when I was learning mine accidence without book.

The third I went to was a woman (daughter to a famous schoolmaster), that had some smattering of Latin. She could teach us to construe the Latin examples of the English rules called the *Parvulæ*, at least such as were rendered into English, and the *Qui mihi* and Lily's rules by the help of a construing book, and put us sometimes to read English; so that with her I did something better than quite lose my time, but not much. Next I was placed under another schoolmaster at S. Helen's Chapel, who was brought up at the then famous school of Winwick, whence multitudes were almost yearly sent to the University, but they were usually of good years before they were fitted, the method where they were taught being very long. This master of mine had the Winwick* method right enough, and was scholar sufficient for me then; but he was a very silly and unconstant man, always making new laws, insomuch that if a boy had been absent a day or two, he knew not how to behave himself for fear of transgressing some new ridiculous order or other. Nor was this the worst, but being a married man, with a charge, and very poor, he lay open to impressions from such as could fee him well to carry partially amongst his scholars, so as the whole school could not but be aware of the grossness of it.

Adam's father being poor, he came in for unfair dealing, and induced his father to have him removed to Rainford—a nearer school, but a costlier one, "because no free school as the other was." But the money was well laid out, for the master was diligent enough in looking to us not only as to grammar-learning, but as to our profiting in the catechetical grounds of religion. He also took notice by himself and admonitors (employed to that purpose) who was absent from the public ordinances, or carried themselves unsuitably there: for the latter no excuse must serve, and for the former it must be a good one. His worst fault while he stayed there was, that he was humorous and passionate, and sometimes in these moods he would whip boys most unmercifully for small or no faults at all. He once bestowed a most severe correction on me for nothing in the world but defending myself from a great sloven (much older, taller, and stronger than myself) who abused me intolerably and incessantly with a besom as had been fit to have been given to one that had picked a pocket. This I concealed; yet at last it came out, and mightily offended my father, but the schoolmaster crying *peccavi*, and promising to do so no more, all was well again. He afterwards succeeded my former master at S. Helen's, whither I followed him.

Adam Martindale supplies us with a full account of his schoolwork:

As for the proficience I made under my master 'twas this: He received me when I was learning in *As in præsenti* and Cato, and instructed me for prose in Corderius, Æsop's fables, Tullie's Offices, epistles, and orations, together with Aphthonius for Latin in prose, and the Greek Grammars of Camden first, and Clenard afterwards, together with a Greek Catechism, and lastly the Greek Testament (for I proceeded no further with him); and for poetry in Mantuan, Terence, Ovid's Epistles and Metamorphoses, Virgil, and Horace. The rhetorics he read to us were Susenbrotus first and Talaeus afterwards. Mine exercises were usually a piece of Latin (of which he himself dictated the English) every day of the week, save Thursdays and Saturdays; and besides somewhat weekly as I rose in ability, first a dialogue in imitation of Corderius, or Pueriles Confabulatiunculæ, then an epistle wherein I was to follow Cicero, though (alas!) at a great distance. Then themes (as we called them) in the way of Aphthonius, consisting of many parts and taking up one side of half a sheet pretty thick written, and (towards the latter end) good store of verses on the back side, most hexameters and pentameters, but some sapphics and adonics. All that were presumed by their standing able to discourse in Latin were under a penalty if they either spoke English or broke Priscian's head; but barbarous language, if not incongruous for grammar, had no punishing but derision. These were the orders we were subject to at teaching hours; yea, though we had liberty by twos to go forth of the school upon our necessary occasions, real or pretended, and sometimes (when the humour took him) he would tie us to them at our times for play.

At fourteen years of age various relations suggested to Adam's father that the boy had better be put to a trade. They pointed out, as is the custom in all ages, instances in which youths had made no advantage of their learning "though they had been brought up to it so long as to be fit for nothing else." The father allowed the boy his choice. He returned, after a short absence, to his old master to find that "he that used to take care of our souls was become an enemy to his own." He had become a drunkard.

I have known him [Adam goes on to say] pick a quarrel with his choicest scholars, so as they could not please him with giving an account of such a little word as *et* or *que* (though as able as himself to do it), and if they escaped with his displeasure and disgracing in the school, without punishment, it was as well as like.*

Adam accordingly, for the fifth time, changes school, and returns to Rainford, to the new schoolmaster who had come there. Not only had this master (Martindale scarcely ever mentions names—a caution which it was desirable to observe in some matters in his age) been taught at Bolton School, but he had been, as report had it, in the University for five years, and pronounced Greek, as Adam is careful to observe, "in the University manner."

Adam describes him as "a man made for a schoolmaster, and most excellent to give the finishing stroke to a country scholar." Here is the full description of himself and his methods:

He was skilful in the derivations of words, teaching us many that we could not find in any lexicon. Nor was he slight in examining us about the dialects, not only in poets but even in the Greek testament; wherein he made us to observe the Hebraisms, Latinisms, and idioms. I heard once a confident scholar say, the Greek testament is perfectly free and clear from all dialects; but it is a great mistake, as our master would have told him, and is plain in the best edition of Pasor.

He taught us also to make Greek exercises, in prose and verse; and both in these and what we made in Latin he expected not only congruity but elegancy. He spoke very good Latin to us in a constant way; put us to take out our lessons ourselves, and, in examining them, he stood not so much upon parsing (as they called it) or scanning of verses and proving them, to which he found us well enured, as upon rhetorical tropes and figures: to fit us whereunto, he removed us out of Talaeus into Farnaby; laughing at Susenbrotus as an old drill piece, which calleth tropes as well as schemes by the name of figures. He was also very notable at teaching us to observe all allusions in profane authors to the Sacred Scriptures, insomuch that anything leaning that way should hardly pass his observation. I remember very well when we were upon the story of Deucaleon's flood in Ovid's Metamorphoses, he took notice of those words "*Ubi nuper Ararat.*" as thinking it a strange allusion (whether intended or accidental) to the mountain of Ararat, upon which Noah's ark rested.

This schoolmaster also removed to St. Helen's, and, Adam adds, was the "only schoolmaster that within the time of my observa-

* Canon Parkinson's note: "This shows that Winwick, the great ecclesiastical foundation of Lancashire, was as famous at that time as a scholastic establishment as it was as a school of theology, the rectors at that period, and indeed for many generations, having as many as five or six curates, whose labours were extended throughout the neighbouring district. The Universities were then the only high road to literary distinction, and the school of Winwick one of their chief feeders from this part of the kingdom. *Such as failed, from various causes, to attain this object of their ambition, became useful schoolmasters in the country around.*"

* Canon Parkinson's note: "As much as could be expected."

Digitized by Google

tion went away thence a sober man." Adam followed him to St. Helen's for two years, and then at sixteen years of age was "allowed" as ready for the University. "But the worst was, the University was not so ready for me; wars being coming on that soon after turned Oxford (whither I was designed) into a garrison and many scholars into soldiers."

Adam, therefore, instead of going to the University, began teaching.

(*To be continued.*)

REVIEWS.

The Remodelling of Humanity.

Mankind in the Making. By H. G. Wells. (6s. Chapman & Hall.)

Following up "Anticipations" and "The Discovery of the Future," Mr. Wells now republishes his recent series of periodical articles "presenting a general theory of social development and of social and political conduct." In noticing his speculations on the discovery of the future, we asked (May, 1902): "What next?" Here is the answer, and it is quite in accordance with our anticipations. "It is an attempt to deal with social and political questions in a new way and from a new starting-point, viewing the whole social and political world as aspects of one universal evolving scheme, and placing all social and political activities in a defined relation to that; and to this general method and trend it is that the attention of the reader is especially directed." The object, it must be acknowledged, is highly laudable; and it is encouraging to find a new co-ordinator of the activities of the universe ready to assume Herbert Spencer's mantle. We trust that Mr. Wells has secured the primary object of his undertaking—"his own mental comfort." How far the work will contribute to the building up of "The New Republic" is another matter. The aspiration is lofty, and large allowance must be made for the weakness of human equipment. Mr. Wells is modest—in terms. He confesses that "he is remarkably not qualified to assume an authoritative tone in these matters, and he is acutely aware of the many defects in detailed knowledge, in temper, and in training these papers collectively display." Yet he does himself the injustice of leaving not a few of such defects unremoved, though readily removable; and for the rest he sacrifices his common sense freely on the foundations of his New Republic.

That New Republic must obviously be a cast-iron despotism; for where else is there any alternative to what Mr. Wells, with curious lack of insight, calls our "base and shifty opportunism in public and social matters"? If that be so, then it will be rather more than "a few years" before his system shall "have become a great world movement, conscious of itself and consistent within itself." There will be plenty of time to consider "the problem of birth supply"—a sufficiently serious problem, in truth: repudiated, tabooed, yet insistent, and soluble only on the basis of researches that are still in their infancy. "Our success or failure with that unending stream of babies"—seven per minute—"is the measure of our civilization; every institution stands or falls by its contribution to that result, by the improvement of the children born, or by the improvement in the quality of births attained under its influence." The proposition, if somewhat strained, is painfully true in a sense; but in the meantime the solution is, as we have indicated, in the hands of experts, and mere popular discussion is of very subordinate value.

Given the babies, what is to be done with them? "School is only one necessary strand in an enormous body of formative influence." It is the strand, however, that we are more immediately concerned with; and Mr. Wells's views of the teacher emerge into interest. Passing over incidental remarks for the moment, we quote a solid passage that will speak for itself:

> Scolding the schoolmaster, gibing at the schoolmaster, guying, afflicting, and exasperating the schoolmaster in every conceivable way, is an amusement so entirely congenial to my temperament that I do not, for one moment, propose to abandon it. It is a devil I have, and I admit it. He insults schoolmasters and bishops in particular, and I do not cast him out; but, at the same time, I would most earnestly insist that all that sort of thing does nothing whatever to advance education, that it is a mere outbreak of personal grace-notes so far as this discussion goes.

Such a profession might well justify the immediate despatch of the book to the waste-basket; but then we should probably be charged with lack of "humour"! Let us turn to particulars about "this most lamentable profession"—"an ill-trained, ill-treated, poorly respected, and much abused (*peccavi!*) profession." What of reading and English grammar? This:

> In the elementary and lower secondary schools ill-chosen reading-books are scampered through and abandoned all too soon in favour of more pretentious "subjects," and a certain preposterous nonsense called "English grammar" is passed through the pupil stuff which happily no mind can retain. . . . It is no good mincing the truth about all this sort of thing. These devices are resorted to by the school teachers of the present . . . because they are utterly ignorant, and know themselves to be utterly ignorant, of the reality of the subject, and because they have to humbug the parent and pass the time by unreal inventions. The case is not a bit better in the higher-grade schools. They do not do so much of the bogus teaching of English, but they do nothing whatever in its place.

If "we all know how atrociously English is taught," what is to be done? "I know very little of the practical teaching of English, my own very fragmentary knowledge of the more familiar *clichés* of our tongue was acquired in a haphazard fashion"—such is Mr. Wells's confession (page 146), and evidently enough a true, and not a merely "humorous," confession. Yet he is ready with counsel:

> The sane course is to begin by establishing the proper way to do the thing, to develop a proper method and demonstrate what can be done by that method in a few selected schools, to prepare and render acceptable the necessary class-books, and then to use examination and inspector, grant-in-aid, training college, lecture, book, and pamphlet to spread the sound expedients. We want an English Language Society, of affluent and vigorous people, that will undertake this work.

Yes, some people want the moon to play with; and amateur reformers are ready enough with large general proposals that comfortably overlook the practical difficulties. If Mr. Wells and his Society are to take charge of this business and render the new class-books "acceptable," and tie down the language and the people, they have need to be very "affluent and vigorous people" indeed—to say nothing of the results of such a cast-iron procedure. "Surely this enterprise of text-books and teachers, of standard phonographs and cheaply published classics, is no fantastic impossible dream!" Very well—this is a free country—let Mr. Wells proceed. Are there, indeed, no good text-books, no good teachers, no "cheaply published classics"? Could any suggestion be more justly termed "fantastic"? Mr. Wells has hit upon the right word, for once at least.

What of science? "I must confess," says Mr. Wells (page 205) in classical English, "that a lot of the science teaching that appears in schools nowadays impresses me as being a very undesirable encumbrance of the curriculum." Indeed:

> The science of the modern school pretends merely to be a teaching of useful knowledge; the vistas, the tremendous implications of modern science are conscientiously disregarded, and it is in effect too often no more than a diversion of school energies to the acquisition of imperfectly analyzed misstatements about entrails, elements, and electricity, with a view—a quite unjustifiable view—to immediate profitable hygienic and commercial application.

As if "the vistas" can be possibly discerned till the eyes have been educated! As if "useful," "profitable" knowledge were to be contemned! "I know of no school Arithmetic," says Mr. Wells, "which does not groan under a weight of sham practical work, and that does not, with an absurd priggishness, exclude the use of algebraic symbols." The two authors of mathematical books that have chanced to secure his approval ought to be proud of the unique eminence he accords them. But Mr. Wells is to set things mathematical universally right by the agency of "a suitably authenticated committee" (page 226)—"on the basis of Prof. Perry's syllabus, perhaps." Prof. Perry will note that "perhaps," and look to his laurels.

What of language teaching? As for classics:

> There is scarcely a work left in Latin or Greek that has not been translated into and assimilated and more or less superseded by English, French, and German works; but the schoolmaster, heedless of these things, still arrests the pupil at the old portal, fumbles with the keys, and partially opens the door into a ransacked treasure chamber.

There, forsooth, is a Daniel come to judgment! And as for modern languages:

> The language teaching of to-day is deliberately, almost conscientiously, not for culture. It would, I am sure, be a very painful and shocking thought indeed to an English parent to think that French was taught in school with a view to reading French books. It is taught as a vulgar necessity for purposes of vulgar communication.

We forbear from further exemplification of Mr. Wells's treatment of teachers and of the subjects they handle. He carries the discussion up to the colleges and the Universities; on a

former occasion we quoted his picture of the hapless "ordinary Oxford, Cambridge, or London B.A."; and we leave the interested reader to follow the ingenuous speculations in the pages of the volume. The results are summed up in a single sentence (page 227):—"The more one looks into scholastic affairs the more one is struck not only by the futility, but the positive mischievousness, of much of what passes for educational liberalism"—a conclusion stated in reference to the school, but apparently no less applicable to college and University. It has not even the merit of originality. One could bear drastic handling if the outcome were to be some definite measure of improvement. But Mr. Wells's speculations are so far removed from facts that no tangible remedy is apparent. His further notions about political and social influences and about "thought in the modern State" do not attract us. He submits, indeed, "that it is only by payment of authors, and, if necessary, their endowment in a spacious manner, and in particular by the entire separation of the rewards of writing from the accidents of the book market, that the function of literature can be adequately discharged in the modern State." How spaciously indeed does an author deserve to be endowed when he discusses a practical and most important national question in large and vague terms with scant knowledge of the real facts and with open contempt for the whole of the existing methods and machinery!

INSTITUTIONS OF ISLAM.

Development of Muslim Theology, Jurisprudence, and Constitutional Theory. By Duncan B. Macdonald, M.A., B.D., Professor of Semitic Languages in Hartford Theological Seminary. (5s. Routledge.) (The Semitic Series.)

Prof. Macdonald approaches his work with the trepidation of the scholar that knows the vastness and difficulty of his undertaking and measures it with the space available for his results; but students may, without apprehension, leave him to settle the score with Muslim specialists. He is also scrupulously careful to warn his readers that the work is incomplete; that Babism, the Shiite theology, the Ibadite systems, Turkish and Persian mysticism, the Darwish fraternities, and Muslim missionary enterprise are treated, if at all, in but meagre fashion. But one cannot have everything in three or four hundred pages, and what Prof. Macdonald aims at is not an exhaustive treatise, but a manageable introduction to a wide and varied field of learning; and he appends a select bibliography for the guidance of more advanced students. Again, while he handles the three branches of his subject separately, he properly emphasizes the fact that such separation is purely mechanical and for convenience only, and that the student will afterwards have to "labour to merge these three sections again into one another." For "we can never say in Islam: 'He is a great lawyer; he, a great theologian; he, a great statesman.' One man may be all three, almost he must be all three, if he is to be any one."

Prof. Macdonald takes the constitutional development first, as being the most concrete and simple aspect (pages 7 to 63). The statement is concise, the essential points being steadily disengaged. The relations of the Emperor of India, the Sultan of Turkey, and the Shah of Persia to Islam are specially interesting. The following anticipation of the development of the Brotherhood of as-Sanusi, founded by the father of its present head in 1837, with its centre at Jarabub, in the Eastern Sahara, between Egypt and Tripolis, and adherents all over the Muslim world, is somewhat startling at first blush, but, we should think, very remote from fulfilment:—

> So there has sprung up in Islam, in tremendous ramifications, an *imperium in imperio*. All the brethren in all the degrees—for, just as in the monastic orders of Europe, there are active members and lay members—reverence and pay blind obedience to the Head in his inaccessible oasis in the African desert. There he works towards the end, and there can be little doubt what that end will be. Sooner or later Europe—in the first instance, England in Egypt and France in Algeria—will have to face the bursting of this storm. For this Mahdi is different from him of Khartoum and the Southern Sudan in that he knows how to rule and wait: for years he has gathered arms and munitions, and trained men for the great *Jihad*. When his plans are ready and his time is come, a new chapter will be opened in the history of Islam—a chapter which will cast into forgetfulness even the recent volcanic outburst in China.

Next Prof. Macdonald deals briefly (pages 65 to 117) with the development of jurisprudence, struggling with two main difficulties—the overpowering mass of material and the perplexing strangeness of ideas. As to the latter point. "Muslim law prescribes everything that a man shall *do* to God, to his neighbour, and to himself: it takes all duty for its portion, and defines all action in terms of duty." Muhammad himself administered the customary law of al-Madina, tempered by his personal notions of equity and supplemented by legislative revelations. With his death legislation ceased, and the process of collecting, arranging, correlating, and developing began. Under the Arab dynasty of the Umayyads, ruling from Damascus, knots of difficulty were cut by the sword, and it was only under the Abbasids that definite and recognized legal schools began to form. Prof. Macdonald shows very clearly how the conflict of views at last issued in a limitation to four legal sources—Qur'an, tradition (prophetic usage), agreement, analogy—and to four schools, "all equally valid and their decisions equally sacred in Muslim eyes." The most notable figures, of course, are Abu Hanifa and Ash-Shafi'i—the former more remarkable for originality and keenness; the latter endowed with "a balance of mind and temper, a clear vision, and full grasp of means and ends that enabled him to say what proved to be the last word in the matter."

The main part of the book is occupied with Muslim theology (pages 119 to 287). Prof. Macdonald urges the student to hold fast three guiding threads, "which are woven distinctly through the web of Muslim religious thought."

> There is tradition (*naql*); there is reason (*aql*); and there is the unveiling of the mystic (*kashf*). They were in the tissue of Muhammad's brain, and they have been in his Church since he died. Now one would be most prominent, now another, according to the thinker of the time; but all were present to some degree. Tradition in its strictest form lives now only with the Wahhabites and the Brotherhood of as-Sanusi; reason has become a scholastic handmaid of theology except among the modern Indian Mu'tazilites, whom orthodox Islam would no more accept as Muslims than a Trinitarian of the Westminster Confession would give the name of Christian to a Unitarian of the left wing; the inner light of the mystic has assumed many forms, running from plainest pantheism to mere devout ecstasy. But in the Church of Muhammad they are all working still; and the catholicity of Islam, in spite of zealots, persecutions, and counter-persecutions, has attained here too, as in law, a liberty of variety in unity.

We need say only that Prof. Macdonald treats with complete fairness, in just proportion, and in lucid exposition the various views as they come forward in the kaleidoscopic play of Muslim thought, philosophical and theological, marking external influences (such as Aristotle and Plato) as well as purely native developments. Especially interesting is his fourth chapter, on the life, times, and work of al-Ghazzalli—"the greatest, certainly the most sympathetic, figure in the history of Islam." Much illustrative matter, with references, &c., is given in appendixes (pages 288 to 371); and there is a useful index. For the English student of the subjects treated the book is indispensable. It is a most scholarly performance, and the style is thoroughly popular in spite of all technicalities and of continuous condensation of material. It is to be hoped that Prof. Macdonald will one day handle each of his three subjects in independent works, with full scope to the learning he manifestly commands and is capable of expressing in attractive literary form.

SOCIAL ENGLAND IN THE MIDDLE AGES.

Mediæval England, 1065–1350. By Mary Bateson. (5s. T. Fisher Unwin. "The Story of the Nations" Series.)

Miss Bateson departs from the political point of view assumed in the other volumes of the series, and takes up the social standpoint, "supplying by illustration from contemporary accounts some of the characteristic detail which is apt to be crowded out in political histories." This seems a wholly fortunate choice: it gives us, instead of a more or less varied recast of familiar matter, a systematic presentation of many important aspects of the progress of civilization that have not yet found their way very freely into the ordinary history books. Miss Bateson says justly:

> Not the least truthful measure of progress lies in those superficial indications of civilization which are set aside as the province of social history. In the mediæval Englishman's domesticity there is an epitome of the life of the nation: English private life has its unity, its episodes and catastrophes, which reflect the shifting lights and shadows of the national story. The private history of kings and princes, nobility, clergy, and commons, has become now, with the progress of historical study, a theme more easy of treatment than it was a while ago. Changes in the social relations of the classes of men can now be traced, changes that have had their part in shaping the story of a nation, no less than the evolution of the agencies of government, the historic series of victories and defeats,

Digitized by Google

gains and losses of territory, the happy or the luckless political chance, the fateful power of the point of time.

The volume is disposed in three nearly equal parts, each covering about a century—Norman Feudalism, 1066–1154; the Lawyers' Feudalism, 1154–1250; and Decadent Feudalism, 1250–1350. Miss Bateson boldly enters the palace, the castle, the abbey, the nunnery, the warehouse, the farmhouse; inspects the business going forward, fetches out the account books, and shows how the people lived their daily life. The matter is of extraordinary variety and interest, and the labour of bringing it together and marshalling it in systematic order must have been great and prolonged. The volume forms the necessary complement to the ordinary political narrative. A very full chronological table is appended, and there is a good index. A specially valuable feature is the illustrations, which number close on a hundred. The work is one of the ablest and most useful in the series.

The Logic of Arithmetic.

Lectures on the Logic of Arithmetic. By M. E. Boole. (2s. Clarendon Press.)

The dedication states that the preparation and publication of the volume were brought about by friendly pressure; and it would certainly have been a pity had the contents of its pages not become accessible to the public. It is not that the methods of the writer are unique: other equally earnest and able teachers have devised analogous, if not identical, systems, and have known how to make arithmetic and other mathematical subjects possess a living interest for their pupils, and how to enable children to realize that rules are by no means mere arbitrary formulæ to be learned with dull toil and used mechanically, but are built up intelligently as affording the direct means of obtaining desired ends. Good teachers will find in the new volume interesting confirmation of many of their own independent ideas, whilst the less gifted will learn from the authoress how they may make their own class lessons more instructive, more intelligible, and more adapted to awaken the interest and the inventive faculty of the scholar. It is not to be supposed that the series of lectures now published is intended to form a substitute for the regular courses and text-books: a term's interval may be allowed to elapse between consecutive lectures, but each is to be repeated with varied illustrations as often as may be deemed advisable. The several discourses are lively and original in character, and are eminently suitable for bringing vividly before the young the common sense involved in what they are studying. The types of illustration chosen by the writer are not all of equal excellence, but the power of improving on the less happy selections lies with the individual teacher, and may always be freely exercised. It is not quite clear how far Miss Boole would have children taught to accept rules on faith in the first instance, for she appears at times to presuppose a practical knowledge of the rule she is explaining; but, whatever her exact views on the point may be, it would seem preferable as often as possible to appeal to reason at the very outset.

"The Social New-Birth."

(1) *Die einheitliche Lebensauffassung als Grundlage für die soziale Neugeburt.* (Mk. 3.60. Beust, Straszburg; Lendorff, Basel.) (2) *Kennt die Bibel das Jenseits?* (Mk. 2.50. Reinhardt, München.) (3) *Orthodoxie oder Christentum?* (Pf. 80. Reinhardt, München.) (4) *Die Gottesherrschaft als welterneuendes Lebensprincip.* (Mk. 1. Reinhardt, München.) All four works by L. Reinhardt, V.D.M.

These volumes and *brochures* are good samples of the earnest and extensive activity of Herr Reinhardt in theological and social discussion. His object in (1) he states clearly and compactly, thus:

An die Stelle der *dualistischen*, innerlich unwahren, antik-heidnischen und mitteralterlich-orthodoxen Weltanschauung muss die biblisch-christliche und modern-wissenschaftliche, *einheitliche* Lebensauffassung gesetzt werden, welche von dem heidnischen Götterhimmel und dem kirchlich überlieferten Jenseits nichts weisz, sondern auf Erden (in der wirklichen Welt) das Reich Gottes oder die Herrschaft der göttlichen Natur- und Geistesgesetze zu verwirklichen sucht.

To sustain his thesis he enters into vigorous and learned expositions, philosophical (on the basis of subjective idealism), scientific (including detailed treatment of the biblical account of the Creation), and historical (through all the ages), and then applies his conclusions to ground "the social new-birth," or "re-birth"—"the being born again" (page 352). But it is not "the ordinary Socialism" that Herr Reinhardt has in view: it is something different from, and far more comprehensive than, political and other external reorganizations; he combines the inner and the external life in an indivisible unity and aims at a spiritual development of the social health (page 13). The "new spirit" that is to inform the individual and society ("die ganze menschliche Gesellschaft") is the spirit of truth; and truth means "the divine laws of Nature and of mind as unmistakably revealed to us in Nature, in history, in Jesus Christ, and in our own self-consciousness" (page 402). But the explanation needs explaining: the terms have different meanings for different persons. In a word, the general argument lacks cogency; but fullness of matter, scholarly research, earnestness of manner, and lucidity of style render the volume exceedingly interesting in details. Herr Reinhardt has closest affinity with Monistic and Unitarian views.

(2) deals with the negative and subordinate side of Herr Reinhardt's contentions. Through 94 pages (out of 184) he examines the teaching of the Bible on a future state, the immortality of the soul, and the various conceptions of conditions in a future life (Sheol, Hades, Purgatory, Heaven, &c.), and reaches negative conclusions. "Die Unsterblichkeit der menschlichen Seele ist der Bibel völlig unbekannt"; and not only so, but the Bible "kennt auch gar nicht denjenigen Begriff von der Seele auf welchem allein die angebliche Unsterblichkeit derselben beruhen kann." Next he enters into an inquiry as to the origin of the various views that he combats, and concludes with a survey of consequences of the recognition that his own opinions are established. The volume is intensely religious in tone, though the outlook is restricted to "the reign of God on earth" ("diesseitige Gottesherrschaft," page 178). But the argument is necessarily at the mercy of an interpretation of particular words and phrases specially open to the influence of individual bias of mind.

(3) and (4) are considerable *brochures*, enforcing the same doctrines in various aspects. It is to be noted that Herr Reinhardt's teaching, though largely, and indeed essentially, destructive from the general point of view in this country, is yet desperately reconstructive for a country where (he says) "jeder waschächte Sozialdemokrat ist Atheist" [(3), page 1]. His technical discussions must stand or fall at the bar of special scholarship; but his vigorous rejection of materialism and his perfervid earnestness for the universal control of human action by an indwelling spirit of religion (though looking no farther than to the present world) must be frankly acknowledged.

GENERAL NOTICES.

CLASSICS.

"Blackie's Illustrated Latin Series."—(1) *Ciceronis Cato maior de Senectute*, edited by G. H. Wells, M.A. (2s.) (2) *M. Tulli Ciceronis Laelius de Amicitia Liber*, edited by Rev. F. Conway, M.A. (2s.) (3) *The Fifth, Sixth, and Seventh Philippic Orations of Marcus Tullius Cicero*, edited by T. K. Brighouse, M.A. (Lond.). (2s. 6d.)

Every one of these volumes is an excellent addition to an admirable series, beautifully printed, artistically and usefully illustrated, and judiciously annotated. The introductions, which are interestingly written, amply serve to place the student in position for the matter of the text. The text itself has been carefully formed on the basis of the best critical results; and headlines indicate the subject of each paragraph. The notes are restrained, pointed, and markedly accurate. The exercises appended for retranslation have evidently been formed with great care of selection, and, under thoughtful direction, cannot but be extremely helpful.

(1) Sophocles: *Oedipous Coloneus*, with Commentary abridged from Prof. Sir R. C. Jebb's large edition. By E. S. Shuckburgh, Litt.D. 4s. (2) Demosthenes: *On the Crown*. Edited by William Watson Goodwin, Hon. LL.D. and D.C.L., Eliot Professor of Greek Literature (Emeritus) in Harvard University. (Cambridge University Press.)

These beautiful editions for school use need only be mentioned. If Dr. Shuckburgh err at all, it is on the safe side of fullness. Prof. Goodwin has abridged his large edition (1901), omitting the critical notes and adding necessary critical remarks as well as elementary explanations in the footnotes. The historical sketch and essays appended to the text supply all that is necessary "to an understanding of this masterpiece of oratory." Both are masterly editions and fine examples of printing and get-up.

MATHEMATICS.

Spherical Trigonometry. By Daniel A. Murray, B.A., Ph.D., Instructor in Mathematics, Cornell University. (2s. 6d. Longmans.)

The brief course embraced in the present volume gives promise of being regarded by teachers as attractive and acceptable, and the work has the advantage of dealing with a branch of mathematics to which comparatively few writers have devoted their attention as authors. The chapters on the subject itself are preceded by a useful recapitulation of some of the important facts of solid and spherical geometry. In spherical trigonometry the text deals principally with such propositions as are necessary to enable the student to understand thoroughly how to solve triangles, both right-angled and oblique; how to determine the ordinary details relating to the inscribed, escribed, and circumscribing circles; and how to compute areas and volumes connected with the sphere. The indications of any way in which a subject may be applied to questions of practical importance is generally productive of increased interest on the part of the student, and this purpose will be served by the chapter on the elements of mathematical astronomy.

A Course of Pure Geometry. By E. H. Askwith, D.D. (Cambridge University Press.)

A valuable acquisition to the students for whom it is designed. It collects for them from the domain of modern geometry a long series of the most important propositions with their demonstrations, and it so treats the matter discussed that the touch of a master hand and the spirit of the true mathematician are everywhere evident. All the methods employed are those of *pure*, as distinguished from *analytical*, geometry; but many of the ideas that owe their origin to the growth of analytical investigation are freely utilized. It is impossible and unnecessary to enumerate all the subjects treated, but amongst them will be found the properties of triangles and of circles as developed in recent years, the concurrence of lines and the collinearity of points, the theories of projection, inversion, and reciprocation, and theorems dealing with inharmonic and harmonic ratios. Ample scope for practice is afforded in the sets of exercises placed at the end of each chapter, which are drawn chiefly from the papers framed for the Mathematical Tripos and for the college examinations.

A School Geometry, Part III. By H. S. Hall, M.A., and F. H. Stevens, M.A. (1s. Macmillan.)

An interesting continuation of the complete "School Geometry" in course of preparation by the well known authors. The subject is the Circle, and most of the elementary properties are demonstrated, as well as the simpler propositions relating to the circle in connexion with rectilineal figures.

Algebra, Part II. By E. M. Langley, M.A., and S. R. N. Bradly, M.A. (2s. Murray. Home and School Library).

Forms a sequel to a volume already noticed in these columns, and gives a very clear conception of the special algebra required by the Board of Education Syllabus (Second Stage). At the end of the course of study here provided the reader should be in a position to take up progressions. The chapter on Involution and Evolution brings out well the inverse character of the latter process, and gives also a short account of the nature and use of Pascal's triangle. The usual discussion of quadratics is supplemented by an interesting explanation of the *graphic* method of solving an equation of the second degree.

FRENCH READING BOOKS.

In *Toujours prêt* (2s., Marlborough) M. Toreau de Marney offers an "ideographic French reader, on modern scientific principles." The story, with type devices for emphasizing grammatical points, runs on one page, and grammatical processes are graphically represented on the opposite page, with explanations and suggestions for exercises. The vocabulary may be used as a key to the text or as a basis for conversation or composition. Some of the "graphs" had better be simplified by the teacher. An elaborate and suggestive presentation, with many useful elements.

Amis et Amiles and *Les Aventures d'Aiol*, as adapted from the "Chansons de Geste" and retold for the young in modern French by Mrs. J. G. Frazer, are combined in one term reader in the "Cours élémentaire Black" (6d.). Mr. F. B. Kirkman adds brief notes and a vocabulary.—A fresh addition to the "Cours moyen et supérieur Black" is Voltaire's *Zadig*, edited by Mr. Kirkman (6d.). On page 31, line 163, an accident to the type has left a grammatical blunder; and in line 153 *le* ought surely to be *la*.

In the series of "Arnold's French Reading Books," *Gil Blas in the Den of Thieves*, arranged from Le Sage, with short notes and vocabulary, by R. de Blanchard, B.A., B.Sc., Lic. ès L. (Univ. Gall.), reappears in a new edition (9d.); and *Richard Whittington* (Eugénie Foa) and *Un Conte de L'Abbé de Saint-Pierre* (Souvestre) together (1s.), and *L'Apprenti* (Souvestre) (1s.), edited by C. F. Herdener, B.A., also furnish good matter, with questions, grammatical exercises, and *thèmes*.

Mr. H. A. Guerber narrates graphically twenty-five *Contes et Légendes*, not of the most familiar class or not in the usual version, relying on the force of repetition (1s. 6d. Harrap, Modern Language Series). While the matter is attractive, the treatment is thoroughly effective. An exceptionally good general reader for little beginners.

Mr. W. G. Hartog's *Lectures et Conversations françaises* (2s. 6d., Rivingtons) provides some fifty lessons—anecdotes, sketches of French history and French life, and a few poetical pieces—"none of them too difficult to be read at sight by classes in the fourth and fifth year of instruction," with maps of France and Paris, followed by conversations and exercises upon the text. A very careful and serviceable book.

M. Jules Lazare, B. ès. L., has compiled and edited fifteen *Contes et Nouvelles* "des meilleurs auteurs contemporains" (1s. 3d., Hachette), adding a concise vocabulary and notes—a fresh and stimulating collection for moderately advanced pupils.—M. A. C. Poiré's *Carnet de Notes d'un Voyageur en France* (1s. 6d., Macmillan), "présente au lecteur anglais, et surtout au futur commerçant ou industriel, les traits caractéristiques qui peuvent l'intéresser." It is a French geography, with more particular reference to industrial, commercial, and agricultural aspects. The facts are plentiful, and the text will impress a special vocabulary.—Mr. R. L. A. du Pontet, M.A., in his *Poèmes choisis* (1s. 6d., Edward Arnold), offers an admirable "selection from French poetry, chiefly lyrical," for middle forms, with historical and metrical introductions, biographical notices, and brief notes.

ENGLISH LITERATURE.

The Indebtedness of Chaucer's "Troilus and Criseyde" to Guido delle Colonne's "Historia Trojana." By George L. Hamilton, A.M., sometime Fellow of Columbia University, Professor of Romance Languages in Trinity College, North Carolina. (5s. net. The Columbia University Press; Macmillan)

The volume is one of those post-graduate exercises in limited, but still important, literary investigation that are stimulated now more and more by some of the American Universities. It is a dissertation presented to the Faculty of Philosophy of Columbia University in fulfilment of one of the requirements for the degree of Doctor of Philosophy. What a purely literary exercise has to do with a degree in philosophy is one of the many inscrutable mysteries of degree conferment. However, Prof. Hamilton's inquiry exhibits much diligence in details, and presents results that are useful and often curious. It seems rather a pity, however, that he did not pay more respect to the Horatian maxim; for he tells us that "studies made subsequent to the writing of this dissertation upon the relations between versions of Benoit's work and the plagiary of Guido may lead me, at a later date, to modify certain statements." This confession of immaturity, however, together with incidental indications in the volume, need not weigh too heavily; for the book, so far as it goes, is a substantial contribution to the question. Once Prof. Hamilton has reached settled convictions on Guido, we hope he will resume his original plan, which was "to make an investigation of Chaucer's indebtedness to the French and Latin writers who were his predecessors in telling the story of 'Troilus and Criseyde.'"

Shakespeare. (1) *Hamlet*, (2) *Macbeth* ("The Student's Shakespeare"). Edited by A. W. Verity, M.A. (2s. 6d. and 3s.) (3) *Macbeth* ("The Pitt Press Shakespeare"). Edited by A. W. Verity, M.A. (1s. 6d.) (Cambridge University Press.)
(4) *Macbeth* ("The Blackfriars Shakespeare"). Edited by M. J. C. Meiklejohn, B.A. (1s. 3d. Meiklejohn & Holden.)

The first two volumes are primarily intended to meet the wants of students for the higher examinations in English, but they will be welcomed by all intelligent readers. The textual difficulties have been very fairly grappled with, in view of the editor's purpose, though many points are not raised at all, and some are restricted in handling. For school and college purposes, however, the notes are adequate, clearly expressed, and most helpful; and they are judiciously eked out by an appended glossary of the more troublesome words. Introductions and appendixes between them provide ample historical and literary apparatus. On the whole, we do not think that any better editions are available. (3) is a new edition on a less elaborate scale, and more suitable for younger classes. (4) shows vigorous and independent treatment. It discusses the plot and the characters, furnishes notes serviceably illustrative of the text, deals with the metre and with points of old or unusual grammar, and adds (among other matters) a select series of examination papers. All these volumes are excellently got up.

ENGLISH LANGUAGE.

(1) *Junior English Examination Papers.* By William Williamson, B.A. (1s. Methuen.) (2) *McDougall's Short Lessons in English Composition.* (6d.) (3) *A First Course of Essay Writing.* By J. H. Fowler, M.A. (6d. Black.) (4) *Hints on Essay Writing for Schools.* By C. H. Hodgson, M.A. (Relfe.) (5) *The Normal Guide to English Composition.* By Isabel F. Young, L.L.A. (3s. 6d. net. Normal Correspondence College Press.) (6) *Matriculation English Course.* By W. H. Low, M.A., and John Briggs, M.A., F.Z.S. (3s. 6d. Clive.)

(1) A passage for paraphrase or analysis is placed at the top of a page, and grammatical questions of various sorts follow, with a subject for an essay last of all. The questions are mostly useful and testing,

Digitized by Google

but not a few are too comprehensive, and some might better have been omitted—who wants to know the masculine or feminine of "tibcat," "jenny-ass," "spawner," or "drone," or the possessive case plural of "he-ass," or even of "virtues"? (2) The explanations are simple and practical and the subjects are judiciously chosen and treated. The matters on the borderland of "grammar" and "rhetoric" might have been more fully utilized. (3) Mr. Fowler gives a good variety of subjects, with stimulating hints and useful cautions. His "suggestions to teachers" are admirable. An extremely well considered and serviceable work. (4) Mr. Hodgson furnishes examples of essays first in skeleton and then fully expressed; next a series of skeletons to be clothed with literary tissue; also additional subjects. His "hints" are all useful; but, while the work is very good as far as it goes, one would like more assistance towards the tissue-forming process. (5) A very comprehensive and sensible volume. Part I. deals very fully with grammatical and rhetorical usages, providing elements too frequently ignored or inadequately presented. Part II. supplies large outlines of essays on historical, descriptive, literary and critical, and abstract subjects; and Part III. gives "model essays" on the subjects of Part II., which will be helpful by way of comparison. (6) The outline grammar hardly seems to meet the quirks and quiddities of the Matriculation examiners, though sufficient for ordinary purposes. Here and there, indeed, one feels a lack of grip. The adjective-clause "is introduced by (1) a relative pronoun, the relative being used in a restrictive or defining sense"; then what sort of clause is it when the relative is "continuative" (or, as other people say, "co-ordinating")? It is strange that such a simple matter should be so generally mismanaged. The analysis is scarcely handled with sufficient firmness in detail; and, in "Act like a man," we should not advise a boy to parse "like" as "adverb of manner, modifying 'act,' and governing 'man' in the objective case." Part II. deals instructively with composition, paraphrasing, and *précis*-writing; only the preparatory sections should be much fuller. Still the book will be found very useful for its purpose.

HISTORY.

Mediæval and Modern History. Part II: *The Modern Age.* By Phi ip van Ness Myers, formerly Professor of History and Political Economy in the University of Cincinnati. (6s. Ginn.)

Mr. Myers now presents the revision and expansion of the latter part of his work, extending from the discovery of America down to the present time, and on the whole it may claim to share the favourable notice we recently gave to the former part. Having set forth summarily the various movements that ushered in the new age, he divides his four centuries into two unequal periods—the era of the Reformation and the era of the Political Revolution. The age of absolute monarchy, "the prelude to the Political Revolution," easily claims nearly as much space as the Reformation; and, when the French Revolution and the Napoleonic era have been described, just a fourth part of the pages is left to the nineteenth century. Mr. Myers has struggled very successfully with his limits of space, by careful selection of topics and precision of statement; and, if in numerous points we should complain of inadequate presentment of causes of events, we must yet acknowledge that he has done remarkably well. A very useful feature of the book is the judiciously selected bibliography appended to the chapters; and there are 13 coloured maps and 3 sketch maps.

A First Book of British History. By T. F. Tout, M.A., Professor of Mediæval and Modern History in the University of Manchester. (2s. 6d. Longmans. Historical Series for Schools, Book I.)

The Second Book of the series of three we have already noticed. The series is on the "concentric" system, and the present volume simply "aims at exciting a general interest in British history in the minds of boys and girls in the junior forms of schools," though "it is not meant absolutely for beginners." It gives a very good general view in an interesting way; but the causes of events are not sufficiently set out to make it substantial "history" teaching, and the language is often loose. We had rather see Prof. Tout employing his time and energy in more useful work—work that most writers of equally good elementary "histories" are not so competent to do, and that nee is very much more urgently to be done. There are 85 illustrations, 13 tables, and 25 maps and plans.

RELIGION.

Pagan and Puritan: The "Octavius" of Minucius. Freely translated by Arthur Aikin Brodribb. (George Bell.)

This little work—the only known work of Marcus Minucius Felix—contains two speeches on religion, one from the pagan, the other from the Christian, point of view, the latter being victorious. "Short as it is, this almost classical dialogue holds an important place in literature as the earliest extant defence of Christianity by a Latin writer—that is, if, as there is reason to believe, Minucius is prior to Tertullian." The date of the book may be placed in the later part of the second century, internal evidence pointing to the year 162 or 163 as the probable date of the argument reported in it. Mr. Brodribb presents a very readable translation, with an instructive introduction and some useful notes. The book is neatly got up.

The Biblical History of the Hebrews. By F. J. Foakes-Jackson, B.D., Fellow of Jesus College, Cambridge, and Hon. Canon of Peterborough. (Cambridge: Heffer. Edward Arnold.)

The author has "endeavoured to tell the story of Israel from a Biblical standpoint, in such a way as to bring into relief the progressive character of God's revelation to His chosen people." His task is a most difficult one; there are watchful lions on both sides of his middle path. At one end of the book the principle of "a gradual revelation from human ignorance to Divine knowledge" will be somewhat strained to support him when he is "compelled to appear to disparage the accuracy of certain records or the truth of certain beliefs"—say, the strict historicity of the three patriarchs of Israel. At the other end some critics may find weakness in the admission of the return from the Captivity. What Mr. Foakes-Jackson says of David may well receive a wider application: "he belongs to an age so different from the present that he is not easily understood." Those that are reasonably well acquainted with the conditions of the enterprise will certainly yield him a large measure of credit both for learning and for practical judgment. The volume is well written, and it will be very serviceable to general readers as well as to students in theology, for whom it is primarily intended.

EDUCATION.

The Teaching of English in the Elementary and the Secondary School. (1) By Percival Chubb, Principal of the High School Department of the Ethical Culture Schools, New York. (4s. 6d. Macmillan. "Teachers' Professional Library.") (2) By George R. Carpenter, A.B., and Franklin T. Baker, A.M., Professors in Columbia University, and Fred N. Scott, Ph.D., Professor in the University of Michigan. (6s. net. Longmans. "American Teachers' Series.")

Though both volumes bear the same title, and both are written by American teachers, all (except Prof. Scott) located in the same Eastern city, they are very different in tone and even in scope, and so seem complementary rather than exclusive. Mr. Chubb manifests a devouring energy which tends to overflow in rhetorical generalities and superfluities, and he seems somewhat confident in the teacher's power of diagnosis of, and prescription for, the child mind. He is aware that "we can be too ambitious; we can overfeed; we can overtrain and overstimulate," and he thinks "the only reliable safeguard is a sense of character values." But, if the teacher is capable of managing this part of her business, how is it that she needs so much detailed instruction on the way to teach English? The work deals with reading, literature, and composition—with the first two very thoroughly, with composition rather generally. We find no specific examples as in the other cases. The pupil's "linguistic conscience," indeed, "must at all times be kept sensitive" (page 177); but, assuming the existence of it, how? This absence of specific treatment probably arises from the fact that "we have come to believe that our prime task as teachers of composition and rhetoric is to bring home to our students how inevitably the art of writing and the science underlying it develop of themselves in and through the orderly, progressive practice of writing." Yes, but what do they develop to? This is one of the unthinking half-truths, all the more disastrous because deliberately held. Though discursive, diffuse, and incomplete, the book is earnest and vivacious, and its solid parts, resting upon considerable experience, will well reward perusal.

The professors, again, start with the aim of "recording and discussing theories with regard to elementary and secondary instruction in English now held by teachers and students of education." At once, however, they plunge into a review of "the long movement that has led to the breaking down of the theory by which all, or nearly all, systematic linguistic instruction should be given by means of Latin and Greek rather than by means of a vernacular"; and, not content with that, they go on to consider "the systems of instruction in the vernacular now in vogue in one or more of the countries of Continental Europe, with the hope of deriving some profit from foreign experience in analogous problems." It is all very interesting, to be sure; but it makes about a fifth part of the book somewhat remote from its proposed purpose—at all events, from a practical standpoint. The detailed exposition of methods, however, is very full, discriminating, and suggestive—by no means superseding Mr. Chubb's work, but more compact and precise and more cautiously guarded in expression. The section on "The Teacher and his Training," by Prof. Scott, deals with general and special qualifications of the teacher, "the philosophy of the assignment" (that is, "certain class-room procedures, the general object of which is to induce in the student a state of mind favourable to composition," especially the announcement of the subject, stimulation of interest in it, arousal of a desire to write upon it, suggestion of a method of procedure in writing, and precautions against wasted effort), and the business of essay correcting. The second of the three branches is the freshest; but they are all competently handled. The extent of the qualifications required may be usefully compared with our own practice. The whole work is much to be commended.

The Teaching of Scientific Method, and other Papers on Education. By Henry E. Armstrong, LL.D., Ph.D., F.R.S. (6s. Macmillan.)

Prof. Armstrong has gathered together twenty-three of his papers on educational subjects from a number of journals in which they have appeared within the past twenty years—mainly of later date; and the round two dozen is completed by a poem on "The Conservation of Matter," by Mr. M. Solomon, inspired by the paper preceding it, and certainly not the least lively of the collection. We note with satisfaction two papers on "The Teaching of Scientific Method" which were first published in our own columns thirteen years ago. In the present arrangement the earlier articles are didactic, and appeal more to the general reader; the later are constructive, and appeal more to the specialist. Prof. Armstrong believes that, "in advocating the introduction of *scientific method* into schools, still more in advocating that teachers generally should have mastered the experimental method and be able to assume the attitude of the investigator," he will "command the support of few—simply because, at present, so few can appreciate what is meant by such expressions." For our part, then, we are decidedly of the "few"; but we are quite sure that the "few" are far more numerous than Prof. Armstrong thinks; and we should rather say the "extension" than the "introduction" of scientific method. Moreover, we fear that Prof. Armstrong thinks too exclusively of "scientific method" in connexion with "scientific subjects"—that is to say, subjects of natural and physical science, to which the term "science" is applied in an artificially restricted sense, calculated to mislead, and, in fact, misleading. No subject is properly taught unless it be taught scientifically. Anyhow, we shall all be glad to have such convenient access to Prof. Armstrong's views, which in many respects deserve, and are receiving, careful consideration. The pity is that he burdens his exposition with undeserved and misconceived reproach of teachers who are recalcitrant on the basis of knowledge and experience with as much justice as he is insistent on changes. Really, all the knowledge and sense of the planet is not monopolized by Prof. Armstrong, and teachers are just as difficult as other people to conciliate to opinions that are thrust upon them with scant consideration for their intelligence and in defiance of their practical experience. Prof. Armstrong might now drop the "fortiter in re" and try the "suaviter in modo." We can assure him that teachers are as honestly anxious as he can be to know the right thing and to do it. The papers, though not unfrequently perverse and provoking, are, of course, very able, interesting, and instructive; and teachers will, no doubt, accord to them, serious consideration, which they amply deserve.

NATURE STUDY.

The Face of Nature. Popular Readings in Elementary Science. By the Rev. C. T. Ovenden, D.D., Canon of St. Patrick's. (2s. Murray's Home and School Library.)

There are four readings—on "Weather Forecasting," "Vegetable Life," "The Record of the Rocks," and "The Story of a Common Stone." They are meant "to afford recreation and instruction on winter evenings in the form of popular lectures on scientific subjects," or for the profitable guidance of "those people—especially the younger people—who are fond of Nature." There are many simple illustrations, with directions (in appendix) for utilizing them in slides for a magic lantern. The "readings" are charmingly written, convey much useful instruction in simple form, and are calculated to excite and foster interest in the phenomena of Nature.

The Nature Student's Note-Book. Part I.: *Nature Notes and Diary* By the Rev. Canon Steward, M.A. Part II.: *Tables for Classification of Plants, Animals, and Insects in detail.* By Alice E. Mitchell. (2s. net. Constable.

The Notes are arranged so as to "suggest to the Nature student what to do and what to look for in the different months of the year," and the blank page for "Memoranda" invites the student to record his own observations and discoveries. The system is sure to foster a habit of intelligent outlook and inquiry. The Tables have been skilfully compiled, and will be very helpful or reference. Incidentally there are given hints for young gardeners, weather indications, bits of folk-lore, &c. The book will prove very serviceable.

First Book of Forestry. By Filibert Roth, Chief of the Division of Forestry, United States Department of the Interior, in charge of the work in the Government Forest Reserves. (3s. 6d. Ginn.)

Mr. Roth has not tried to write a text-book or manual of forestry; his object is "to present in simple, non-technical language some of the general principles underlying the science, and to state the methods which are employed and the objects to be attained in the practice of forestry." This he has done in view of the desire "to introduce this useful and interesting study into our public schools and country homes." He deals with American forests, and has in view American readers; but much of his book will apply to British woods, and, with the aid of the numerous illustrations, it will be intelligible throughout, and most interesting, to British readers. It is admirably got up.

MISCELLANEOUS.

Mr. Alfred J. Martin presents a compact and handy volume of *Up-to-date Tables of Imperial, Metric, Indian, and Colonial Weights and Measures* (2s. 6d., Fisher Unwin). The main purpose is to urge the adoption of the metric system and to explain everything about it; but the book also deals with a vast miscellany of "matters indirectly connected with coinage, time, weights and measures, and their practical applications," with "some particulars concerning the Empire which would be affected by the reforms advocated." It is an extraordinary example of *multa in parvo*.—Mr. Martin also provides "a supplement" to the foregoing volume—an *Up-to-date Beginner's Table-Book* "for Schools and Home-teaching" (1d., Fisher Unwin), "being a guide to simple Arithmetic, showing how Decimals can be taught at a very early age," and containing "all necessary tables of time," &c., and even "a short treatise on Book-keeping."—We have also *The Metric System*, explained, with exercises, examples, and illustrations, by Georges Rouselle, teacher in the Paris Communal Schools, translated and adapted by R. Smith, Head Master of the Paris British Schools, and published under the patronage of the British Chamber of Commerce at Paris (1s. 6d. net, Gedalge, Paris; Hachette). The explanations are full and practical, and they are much assisted by judicious illustrations.

The Public Schools Year-Book (2s. 6d., Swan Sonnenschein), now in its fifteenth year, contains not only very full information about the public schools but also a long series of appendixes (occupying nearly half the volume) on examinations for the various branches of the Civil Service, on the Head Masters' Conference, the Oxford and Cambridge Certificate Examination, 1903, the engineering, musical, and medical professions, and agriculture and horticulture (with Colonial openings for public-school boys), as well as a select list of preparatory schools, notes on educational books of the year, &c. It is a very comprehensive and handy record of matters of interest to parents, teachers, and educational workers.

Who's Who, 1904 (7s. 6d. net, Black), has grown to 1,700 pages, now occupied by biographies alone—an extremely useful volume of reference. The tables, which have been gradually crushed out—though they were in fact the original nucleus of the book—have been gathered together into a separate publication, *Who's Who Year-Book*, 1904 (1s. net, Black), and will be found most serviceable. Both volumes, indeed, are indispensable to busy men.

The Englishwoman's Year-Book and Directory, 1904 (2s. 6d. net, Black), edited by Emily Janes, appears in its sixth year, revised, enlarged, and entirely remodelled. We have had woeful evidence of its popularity: last year it gave a wrong address for our publisher, and this year it repeats the blunder (in spite of our protest).

The Cape of Good Hope Teachers' Annual, 1904, now in its fourth year of publication (1s. 6d. Lancaster: Gilchrist), gives a very full account of educational institutions in South Africa.

NEW EDITIONS AND REPRINTS.

Messrs. Constable have just issued two more volumes of "An English Garner"—*Some Longer Elizabethan Poems* and *Shorter Elizabethan Poems* (4s. net each), with introductions by A. H. Bullen. The introductions, if comparatively brief, are well informed and helpful. The volumes contain much rare and curious matter illustrative of the period and very acceptable to literary readers. They are liberally printed and got up.

Messrs. Smith, Elder, & Co.'s popular edition of Mr. Sidney Lee's most skilful and interesting biography of *Queen Victoria* (6s.) will be widely welcomed. The text has been revised in details from fresh information, and the volume is furnished with portraits of the Queen (at the ages of twenty and seventy-eight), autograph draft of the Queen's letter inviting Disraeli to form an Administration (1874), a reproduction of the Diamond Jubilee medal, and a map of the British Empire (1901). There is also a serviceable index.

Messrs. Methuen publish a spacious edition of *Helio-Tropes; or, New Posies for Sundials*, "written in an old book partly in English and partly in Latin, and expounded in English, by John Parmenter, Clerk, of Wingham in the County of Kent, 1625," by Perceval Landon (3s. 6d. net). Parmenter "has his limitations, and at times his touch of vanity still." A curious performance.

Messrs. Macniven & Wallace (Edinburgh) issue a "revised and corrected edition" of *A Difficult Chapter in the History of Israel*, by the Rev. W. H. Carslaw, D.D., which first appeared in 1876. It is "an account, in the words of Scripture, of the Kings of Israel and Judah from the Disruption of the Kingdom till the Babylonish Captivity," with introduction and notes, and deals very ably with the chronological difficulties.

Messrs. Churchill issue a fourth edition of the well known and appreciated *Elementary Practical Chemistry*, by Frank Clowes, D.Sc. (Lond.), and J. Bernard Coleman, A.R.C.Sc. Part I. deals with "General Chemistry," Part II. with "Analytical Chemistry." (2s. 6d. net and 4s. 6d. net.)

Mr. Fisher Unwin is circulating a second impression of *Rome*, by Mary Ford, in "The Children's Study Series"—a very handy and pretty volume.

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL AND LOGICAL FOUNDATIONS OF INTELLECTUAL EDUCATION.

To be delivered by W. E. JOHNSON, M.A., Sidgwick Lecturer in Moral Science in the University of Cambridge.

SYLLABUS.

I. Provisional definition of education as a practical science. Its dependence upon psychology. Its connection with the normative sciences of logic, æsthetics, and ethics. Education must assume general agreement with respect to the ultimate ends of life. It is a science of means, not of ends. A comparison between the lecturer's standpoint in education and the theories of Herbart. How far intellectual, æsthetic, and moral education can be distinguished. The position of so-called physical education. The practical opportunities afforded to the teacher of contributing to psychological observation. The two chief methods of obtaining particular psychological data -(i.) the introspective, (ii.) the interpretative. Range, difficulties, and connections of these two methods.

II. General analysis of mental states. The three fundamentally distinct factors—knowledge, feeling, activity. These three regarded as mutually dependent, not as antagonistic. Especially in the higher forms of mental process, action is prompted by feeling and guided by knowledge; and such action is spoken of as the manifestation of the will. Different forms and different degrees of activity. Education as mainly concerned with the control of the conscious activities of the child. Preliminary definitions of such terms as conation and purpose, interest and attention, &c.

III. The classification of intellectual processes by reference to so-called faculties. Preliminary definitions of sensation, perception, observation, memory, imagination, conception, reasoning. The practical errors that have arisen from a false view of this classification—things connected which should be separated, and things separated which should be connected. The key for understanding the due connection and separation of educational aims and influences to be found in the principle of unity of interest. Interest as progressive, and as involving subjective activity. The various faculties developed *pari passu* as they are brought to bear upon any object of study. The growing stages of childhood distinguished by the objects of interest, rather than by the prevalent exercise of one or other faculty. Two-fold function of the teacher in regard to interest. The whole theory summed up in the doctrine of apperception.

IV. General account of intellectual development. Active and receptive phases—the former continuously increasing in predominance as compared with the latter. Parallel growth in mind and brain. Retentiveness and modifiability. Differentiation and assimilation. Powers of distinguishing and of connecting. Facility and familiarity. The different forms of analysis and synthesis. Mental process and mental product. Permanent acquisitions and variable applications.

V. Percept on as a direct and purposive co-ordination of sensory and motor elements. Temporal and spatial synthesis. Acquisition of physical aptitudes by practice. The gradually attained control and co-ordination of the sense-organs and organs of movement. Sense-discrimination aided by motor production—speaking, drawing, singing, &c. Imitation. Observation as systematized control of perceptual processes. The interest of curiosity. Prospective and retrospective attention and "meaning." Continuity of purpose and interest in such activities as listening and watching.

VI. Association or suggestion. Distinction and relation between integration and redintegration. Association (*a*) between parts contained in a common whole, and (*b*) between wholes containing a common part. Fundamental principles underlying all cases of association. Different forms of association, Activity and interest involved in association. Control of association by purpose. Pedagogic maxims based on the doctrine of association. Technical aids to association. Co-operative and antagonistic associations.

VII. Memory—ambiguities of the term. Some writers limit it to reminiscence. Broadly it includes the reproduction, in some kind of connected whole, either (*a*) of movements or (*b*) of images or (*c*) of ideas. In particular, verbal memory is based on the repetition, in a connected series, of the articulatory movements of speech. Man's intellectual powers as dependent largely on the control and initiation of these movements. Language as aiding and aided by accompanying images and ideas through a double process of association. The free reproduction, in varied forms of language, of significant trains of images and ideas. The teaching of composition. First beginnings of constructive thought.

VIII. Imagination; its three kinds, reproductive, interpretative, and originative. Imagination and perception cover the same ground. The power of imagination gauged by (*a*) its vividness and consequent influence upon feeling, (*b*) its subservience to purposive control. Childish imagination not more vivid, but less controlled, than that of the adult. Difficulties in exercising the child's imagination through the medium of words. Practically, imagination cannot be separated from ideation. Illustrations from the teaching of geography and history. The connection of imagination with æsthetic feeling and appreciation. Poetry and literature.

IX. Ideas and conceptions. How knowledge passes from the relatively particular and indefinite to the relatively general and definite. The development of knowledge as evidenced by the presence of agreements or differences, not by the absence of differences or agreements. How to test a child's powers of thought by reference to his use of language. Ignorance of the conventions of adult language often confused with defect in the power of perceiving agreements or differences between things. Power of understanding to be measured by complexity and consistency in the use of language. The child's employment of nouns, adjectives, verbs, &c. The concrete and the abstract.

X. Terms and elementary propositions. Comparison between the psychological and the logical account of the intension and extension of terms. Logical definition and division. The proposition as expressing the analytic-synthetic function of thought. The conceptions of thinghood, causality, and personality. The judgment as arising out of an attitude of interrogation or apparent inconsistency. Suspense and conviction. The apprehension of truth and reality as involving counterlimitation between subject and object. The developing conception of self in its relation to other selves.

XI. General judgments and reasoning. The avoidance of inconsistency. Deductive and inductive inference. Distinctions between the psychological principles of discovery and the logical principles of proof. The teaching of deductive, and of inductive sciences. The importance of the heuristic method in both. Such teaching should promote (*a*) activity, (*b*) understanding, (*c*) retention. Danger in the teaching of inductive sciences of encouraging unsound reasoning. Educational aspects of the well known methods of induction.

XII. New formulations and general summary of principles, with further applications.

C. R. HODGSON, B.A., *Secretary.*

FIRST GLANCES.

Classics.

Compositions and Translations. By the late Henry Charles Finch Mason. Prefatory Memoir by R. C. Gilson. Edited by H. H. West. 3s. 6d. net. Cambridge University Press.
[Very interesting and scholarly renderings, chiefly from English verse into Latin and Greek verse.]

Curtius. History of Alexander the Great, IX. 1–5. (1) Text and brief Notes. (2) A close, interlinear Translation. Both by the Rev. J. Lightfoot, M.A., D.D. 1s. net each. Normal Correspondence College Press.

Latin Reader, A First. By K. P. Wilson, M.A. 1s. 6d. Blackwood.
[Passages well chosen and carefully graduated, with select notes, exercises, and full vocabulary. Very serviceable.]

Quintiliani Institutionis Oratoriae Liber X. Edited by W. Peterson, C.M.G., LL.D., Principal of the McGill University, Montreal. Part I.: Introduction and Text. Part II.: Notes. 3s. 6d. Clarendon Press.
[Second edition of a very able and scholarly work.]

Mathematics.

Arithmetical Examples. By W. G. Borchardt, M.A., B.Sc. 3s. Rivingtons.
[Answers. 114 test papers. Very useful.]

Euclid, Knotty Points in (Books I., II., III., IV., and VI.); and Key to the same. By Alfred E. Ikin, B.Sc., L.C.P. 2s. 6d. net and 1s. net. Normal Correspondence College Press.

Geometry, An Introduction to the Study of. By A. J. Pressland, M.A., F.R.S.E. 1s. Rivingtons.
["Written for the beginner whose fingers are all thumbs"; "only assumes that he can sharpen a pencil."]

Graphs and Imaginaries. By J. G. Hamilton, B.A., and F. Kettle, B.A 1s. 6d. E. Arnold.
["An easy method of finding graphically imaginary roots of quadratic equations and imaginary points of intersections of various curves, with illustrations of the principle from elementary geometry."]

Tables, Five-Figure, of Mathematical Functions. By John Borthwick Dale, M.A. 3s. 6d. Edward Arnold.
[Comprises tables of logarithms, powers of numbers, trigonometric, elliptic, and other transcendental functions. Includes many tables not usual in such collections; excludes such as are of use only in navigation. Extremely useful.]

Science.

Animal Studies. By David Starr Jordan, President of Leland Stanford Junior University; Vernon Lyman Kellogg, Professor of Entomology, and Harold Heath, Associate Professor of Invertebrate Zoology, in the same University. 5s. net. Appletons. (Twentieth Century Text-Books.)
["A compact, but complete, treatment of elementary zoology."]

Botany, Second Stage. By J. M. Lowson, M.A., B.Sc., F.L.S. 3s. 6d. Clive. (Organized Science Series.)
["An adaptation of the 'Text-Book of Botany' to the requirements of the Second Stage Examination of the Board of Education, South Kensington; containing the evening papers set by the Board of Education from 1899 to 1903." Exposition good; diagrams (312) clear and helpful.]

Chemistry, Descriptive. By Lyman C. Newell, Ph.D., Instructor in Chemistry, State Normal School, Lowell, Mass. Part I.: Text, with Exercises and Problems. Part II.: Experiments. 4s. 6d. and 1s. 6d. Heath. (Modern Science Series.)
["For teachers who wish to emphasize the facts, laws, theories, and applications of chemistry."]

Electricity and Magnetism. By C. J. L. Wagstaff, M.A., and G. C. Bloomer, B.A. 2s. 6d. Heffer; Simpkin, Marshall, & Co.
[Third volume of "Practical Physics for Schools." Thoroughly practical. Excellent.]

English Literature.

"Golden Treasury," Palgrave's: Notes on. By J. Boardman, B.A. (Lond.), L.C.P. 9d. net. Normal Correspondence College Press.
[Copious test questions; brief biographies.]

Longfellow. (1) Evangeline. (2) Hiawatha. Edited by F. Gorse, M.A. 4d. and 6d. net. Meiklejohn & Holden.
[Notes full and good. Brief historical account in (1).]

Poetry, An Edgbaston Book of. Selected by Edith M. Colman, Edgbaston High School for Girls. 2s. Blackie.
[Dainty volume; selections varied and tasteful.]

Scott. The Lord of the Isles. (1) Edited by W. M. Mackenzie, M.A. 1s. 4d. Black (School Edition). (2) Edited by W. Keith Leask, M.A. 1s. 4d. Dent (English Texts for Schools).
[Both exceptionally thorough; the latter distinctively literary.]

Shakspere, The Royal, Part I. 6d. net. Cassell.
[With facsimile of Shakespeare's will. "New Fine Art Edition," in fortnightly parts; 34 Rembrandt photogravures "from choice copyright pictures by eminent artists," and 34 tinted plates. Text of Prof. Delius. Introduction by Dr. F. J. Furnivall. Handsome.]

Thackeray. Esmond. By Miss A. A. Barter. Black.
[School Edition. Useful introduction, appendixes, and notes.]

Thackeray. Esmond. 2s. 6d. Macmillan (English Classics).
[Life and writings of Thackeray; "story" of *Esmond*; characters; historical summary; full notes; questions; index.]

Wallace, Sir D. M., K.C.I.E., K.C.V.O. The Web of Empire. Macmillan.
"A Diary of the Imperial Tour of their Royal Highnesses the Duke and Duchess of Cornwall and York in 1901." Abridged edition for schools. Illustrated.

Education.

Concordat, An Educational. By a Liberal Candidate. 3d. Watts.
[Issued for the Rationalist Press Association. "I fall back upon the simple, logical, and wholly just plan of secular education in State schools."]

Consider the Children. By Honnor Morten. 1s. net. Brimley Johnson.
["A plea for better physical and moral education."]

Democratic Ideal, The, in Education. By R. E. Hughes. 1s. net. Charles & Dible.
[We must "look westward, not eastward, for light."]

Head Mistresses, Association of: Report of Conference, October 24, 1903. 1s.; post free, 1s. 3d., from Miss Young, Secretary, 92 Victoria Street, Westminster, S.W.

Herbart and the Herbartian Theory of Education: a Criticism. By Alexander Darroch, M.A., Professor of Education in the University of Edinburgh. 3s. 6d. net. Longmans.

Herbartianism, The Critics of. By F. H. Hayward, D.Lit., M.A., B.Sc. (Lond.), B.A. (Cantab.), F.C.P., assisted by M. E. Thomas. 4s. 6d. Swan Sonnenschein.

Interest and Education. By Charles DeGarmo, Professor of the Science and Art of Education, Cornell University. 4s. 6d. net. Macmillan.

London Education. By Sidney Webb. 2s. 6d. net. Longmans.

Natural Law, Education in accordance with. By Charles B. Ingham. Novello.
["Suggestions for the consideration of parents, teachers, and social reformers."]

History and Geography Readers.

Asia. "The World and its People" Series. 1s. 6d. Nelson.
[Special reference to British Possessions. Well written; numerous good illustrations, many coloured. Excellent.]

Australasia and the East Indies. "Black's School Geography" Series. By Prof. Lionel W. Lyde, M.A., F.R.G.S. 1s. 4d.
["No maps, and little variety of type" (deliberately on principle). Brief, pointed, and suggestive.]

Australia and Oceania. "Descriptive Geographies from Original Sources" Series. Selected by F. D. Herbertson, B.A. (Lond.); edited by A. J. Herbertson, M.A. (Oxon.), Ph.D. (Freiburg i.B.). 2s. 6d. Black.
[33 illustrations. Most instructive collateral reading.]

(1) England and Wales; (2) The British Isles. "Chambers's Twentieth Century Geography Readers." Books III. and IV.a. 1s. 3d. and 1s. 6d.
[Fluently written, and liberally illustrated.]

England, The Introductory History of. "Pitman's King Edward History Reader." 1s. 3d.
[Most profusely illustrated. Simple and attractive.]

England and Wales. "Pitman's New Era Geography Reader." 1s. 3d.
[Interesting; practical; smothered with capital illustrations.]

English History Reader. For the Upper Standards. By E. M. Wilmot-Buxton. 2s. Skeffington.
[Well written, with some illustrations. But we are still told, by text and picture, that John "signed" the Charter; and only ten pages are allotted to the period since Waterloo.]

England, Social Life in. Vol. II., from 1603 to the present day. By John Finnemore. 1s. 6d. Black.
[57 illustrations. Very readable and instructive.]

World, The Story of the. Five volumes—(1) On the Shores of the Great Sea; (2) The Discovery of New Worlds; (3) The Awakening of Europe; (4) The Struggle for Sea Power; (5) Growth of the British Empire. By M. B. Synge. Blackwood.
[Very interestingly written; judiciously illustrated. Admirably got up. Helps to comprehensive grasp.]

Physique, National, and an Ideal Army. By Arthur H. Rideal, M.D. Reprint from the *Army and Navy Gazette* (February 13).
[Advocates for every boy of twelve or thirteen (unless physically unfit or destined for the Navy) a compulsory five years' course of drill and instruction calculated to fit him for a place in the ranks of the Army.]

MATHEMATICS.

15418. (W. J. GREENSTREET, M.A.)—The foci of a variable ellipse are fixed. From a point P normals are drawn to the variable ellipse. Find the loci of the centre and foci of the conic passing through the point P and through the feet of the normals.

Solutions (I.) *by* R. F. DAVIS, M.A., *and* H. BATEMAN, B.A.; (II.) *by the* PROPOSER.

(I.) Draw PN, PM perpendicular to CA, CB respectively. Produce PN to Q and MP to R so that $PN = e^2PQ$ and $MP = e^2MR$; and complete the rectangle RPQO. Then it is known that a rectangular hyperbola having O for its centre, OQ, OR for its asymptotes, and passing through C, P will intersect the ellipse in four points, the normals at which co-intersect at P. [See solution, by R. F. Davis, M.A., to Question 52, *Math. Gaz.*, Vol. I., p. 21.] Then, since PN : RO = MP : MR, the locus of O is the straight line through M, N. Moreover, if F be a focus of the rectangular hyperbola, FP ~ FC varies as the difference of the perpendicular distances of P, C from the directrix, that is to say, is constant. Hence the locus of F is a hyperbola having P, C for foci (passing through M, N).

It is to be noticed that these results do not involve the lengths of the axes. The restriction that the variable ellipses should be confocal may therefore be removed. It will be sufficient for them to have the same centre and their axes in the same direction.

(II.) If P be (ξ, η), and the equation to the ellipse be $x^2/a^2 + y^2/b^2 = 1$, that of the Apollonian hyperbola is $c^2xy + b^2\eta x - a^2\xi y = 0$. The four foci are found to be $[a^2\xi \pm ab\sqrt{(\pm 2\xi\eta)}]/c^2$, $-[b^2\eta \pm ab\sqrt{(\pm 2\xi\eta)}]/c^2$, and the locus of the foci consists of two conics, whose equations are

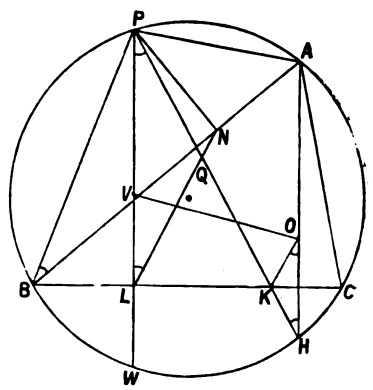
$$(\xi \pm \eta)^2(x^2 + y^2) = (\xi x + \eta y \pm \xi\eta)^2 \quad \ldots\ldots\ldots\ldots\ldots\ldots (A).$$

If O be the centre of the original ellipse, it is also a focus of each of these conics. Their centre will be found to bisect OP. O and P are common foci. The locus of the centre is $x/\xi + y/\eta - 1 = 0$, *i.e.*, the join of the projections of P on the axes. As the three loci are independent of a and b, the ellipses need not be confocal. [The conics (A) will always be an ellipse and a hyperbola.]

Mr. BATEMAN also remarks that the locus of the foci consists of two conics, and Mr. DAVIS draws attention to the fact that the existence of the second of the conics becomes evident in analysis from the consideration of the imaginary foci, of which pure geometry does not take account.

The Four Simson-Lines of Four Points on a Circle, each with regard to the Triangle formed by the other three, are Concurrent.

By W. F. BEARD, M.A.



If O be the orthocentre of ABC, and PL, PN perpendiculars from P to BC and AB, then LN is the Simson-line of P with respect to ABC. Now plainly the following angles are equal:—

$$\angle KOH = \angle KHO = \angle LPK = \angle PBA = \angle PLQ.$$

Since $\angle LPK = \angle PLQ$ in the right-angled triangle PLK, we get PQ = QK; while, since

$$\angle KOH = \angle PLQ,$$

OK is parallel to LN; therefore PO is bisected by LN.

Again, taking LV = LW, V is the orthocentre of PBC, and, PW, AH being parallel chords, PA = WH = OV (O and V being the images of H and W in BC). Hence OV is equal and parallel to AP; therefore APVO is a parallelogram, and AV is bisected at the middle point of OP. But the Simson-line of A with regard to PBC bisects AV (by the preceding theorem); therefore it also bisects OP. Hence the four Simson-lines are concurrent at the middle point of OP.

The further theorem is likewise obvious: that the four orthocentres of ABC, PBC, PCA, PAB form a quadrilateral equal in all respects to PABC.

15429. (H. MACCOLL, B.A.)—What is the chance that xy is greater than a: firstly, on the assumption that x and y are each taken at random between 1 and 5; secondly, on the assumption that x is taken at random between 1 and 5, and then y at random between 1 and x? The constant a is positive.

Digitized by Google

Solution by the PROPOSER.

We will first find the limits of variation on each assumption. Let A = our data on the first assumption, and let Q = $(xy > a)$. We have

$$A = y_{1'.2}x_{1'.2}, \quad Q = y_3;$$

therefore

$$AQ = y_{1'.2.3}x_{1'.2}$$
$$= y_{1'}(y_2x_2 + y_3x_{3'})x_{1'.2}$$
$$= y_{1'.2}x_{1'.2.3} + y_{1'.3}x_{3'.1'.2}$$
$$= y_{1'.2}x_{1'.2.3} + y_{1'.3}x_{3'.1'.2.4} \quad [\text{for } y_{1'.3} \text{ implies } y_1 > y_3, \text{ which implies } x_4]$$
$$= y_{1'.2}x_{1'}(x_2a_{1'} + x_3a_1) + y_{1'.3}(x_{3'}a_{2'} + x_{1'}a_2)(x_2a_{2'} + x_4a_2)$$
$$= y_{1'.2}(x_{1'.2}a_{1'} + x_{1'}\ \ a_1) + y_{1'.3}(x_{3'.2}a_{2'} + x_{1'.4}a_2)$$
[for $a_{2'.2}$ is impossible]
$$= y_{1'.2}(x_{1'.2}a_{1'}{}^0 + x_{1'.3}a_{2'.1}) + y_{1'.3}(x_{3'.2}a_{2'.1} + x_{1'.4}a_{3'.2})$$
[assuming a to be positive; for $x_{1'.3} : (x_1 > x_3) : a_{2'}$, $x_{3'.2} : a_1$, and $x_{1'.4} : a_{3'}$].

Limits on First Assumption.		
$y_1 = 5$	$x_1 = 5$	$a_1 = 1$
$y_2 = 1$	$x_2 = 1$	$a_2 = 5$
$y_3 = a/x$	$x_3 = a$	$a_3 = 25$
	$x_4 = \frac{1}{5}a$	

Arranging according to the limits of the constant, we get finally on the first assumption

$$a_{1'.0}(y_{1'.}\ x_{1'.2}) + a_{2'.1}(y_{1'.2}x_{1'.} \quad + y_{1'.3}x_{3'.2}) + a_{3'.2}(y_{1'.3}x_{1'.4}).$$

To find the limits on the second assumption, let A = our data $= y_{1'.2}x_{1'.2}$, and let

$$Q = (xy > a) = y_3.$$

$$AQ = y_{1'.2.3}x_{1'.2}$$
$$= y_{1'.2}x_{1'.2.3} + y_{1'.3}x_{3'.1'.2.4},$$

as before, but with different values of y_1 and x_4. By the same process as before we get finally

Limits on Second Assumption.		
$y_1 = x$	$x_1 = 5$	$a_1 = 1$
$y_2 = 1$	$x_2 = 1$	$a_2 = 5$
$y_3 = a/x$	$x_3 = a$	$a_3 = 25$
	$x_4 = \sqrt{a}$	

$$AQ = a_{1'.0}(y_{1'.2}x_{1'.2}) + a_{2'.1}(y_{1'.2}x_{1'.3} + y_{1'.3}x_{3'.4}) + a_{3'.2}(y_{1'.3}x_{1'.4}).$$

Thus, whichever of the two assumptions we take as our data, AQ is possible only in three cases, namely, $a_1 > a > 0$, $a_2 > a > a_1$, and $a_3 > a > a_2$. To find the probability of any statement $y_{m'.n}x_{r'.s}$ in any of the three cases, and on either assumption, let the symbol x^a assert as a statement that, out of the many possible and equally probable values of x between x_1 and x_2, a particular value x is the one that will turn up; and let y^a similarly assert that, out of the many possible and equally probable values of y between y_1 and y_2, a particular value y is the one that will turn up. We have

$$x^a y^a/A = x^a/A \,.\, y^a/Ax^a = dx/(x_1 - x_2)\,.\,dy/(y_1 - y_2),$$

and the sum of these infinitesimal chances within the limits prescribed by the statement $y_{m'.n}x_{r'.s}$ is the chance that this prescribing statement is true. Hence, whatever assumption we take,

$$\frac{y_{m'.n}x_{r'.s}}{A} = \int_{y_n}^{y_m} dy \int_{x_s}^{x_r} dx \frac{1}{(x_1 - x_2)(y_1 - y_2)}.$$

Taking the first assumption, we have $(x_1 - x_2)(y_1 - y_2) = 16$; so that, on the first assumption, we get three different answers depending upon the limits of a, namely,

(1) $Q/Aa_{1'.0} = 1$, (2) $Q/Aa_{2'.1} = \frac{1}{16}(15 + a - a\log a)$,

(3) $Q/Aa_{3'.2} = \frac{1}{16}(25 - a + a\log a - 2a\log 5)$.

When a is greater than a_3 the chance is, of course, zero. As a particular case, suppose $a = 4$. This is included in the second case, and we get $Q/A = \frac{1}{16}(15 + 4 - 4\log 4) = \cdot 8409$ nearly. Next, suppose $a = 9$. This is included in the third case, and we get

$$Q/A = \tfrac{1}{16}(25 - 9 + 9\log 9 - 18\log 5) = \cdot 4253 \text{ nearly.}$$

Taking now the second assumption, that y is taken at random between 1 and x, we have $(x_1 - x_2)(y_1 - y_2) = 4(x - 1)$, from the second table of limits, and again three answers, namely,

(1) $Q/Aa_{1'.0} = 1$,

(2) $Q/Aa_{2'.1} = \frac{1}{4}\{5 - \sqrt{a} + a\log\sqrt{a} - (a-1)\log(\sqrt{a}+1)\}$,

(3) $Q/Aa_{3'.2} = \frac{1}{4}\{5 - \sqrt{a} + a\log 5 - (a-1)\log 4 - a\log\sqrt{a} + (a-1)\log(\sqrt{a}-1)\}$.

When a is greater than a_3 the chance is zero.

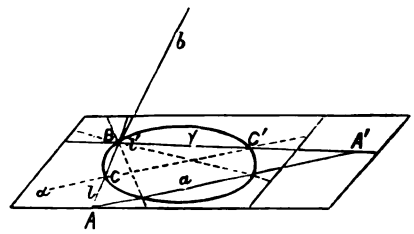
As particular cases, when $a = 4$, we get $Q/A = \cdot 6192$ nearly, and when $a = 9$, we get $Q/A = \cdot 2633$ nearly.

It is assumed throughout that a is positive; for on the assumption that a is negative there would be no problem to solve, the chance required in that case being evidently 1, since x and y are restricted between 1 and 5. (For a full explanation of the method see my paper on "The Calculus of Limits," *Reprint*, New Series, Vol. v.)

Note.—I may mention that I have tested the last two chances ($\cdot 6192$ and $\cdot 2633$) by an easy experimental method of 500 trials, and found that the event $xy > 4$ happened 320 times instead of the most likely number, *a priori*, 310; while the event $xy > 9$ happened 137 times instead of the most likely number 132. These results are, I think, as close as could reasonably be expected.

8712. (Professor SCHOUTE.)—A surface S of the third order passing through two non-coplanar lines a and b is given, and a line l intersects a in A, b in B, and S for the third time in C, under the condition AC = CB. Find (1) the locus of the line l, and (2) its intersection with the given surface S.

Solution by Professor JAN DE VRIES.

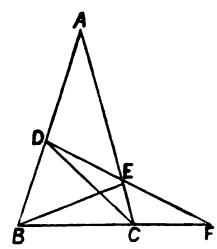


A plane α through a cuts S still in a conic γ passing by the point B where a cuts b. Hence there are two lines l through B, intersecting γ in C and a in A, under the condition AC = CB. Hence b is a double line of the locus (l), and so will be a. Hence the locus (l) is a ruled surface of the fourth order with two double lines a and b.

Its intersection with S consists of the double lines a and b, each being counted twice, the five straight lines of S which cut both a and b, and of the cubic curve that S has in common with the plane which bisects at right angles the common perpendiculars of a and b.

[Mr. Nesbitt's note (*Educational Times*, Vol. LVII., p. 40, and *Mathematical Reprint*, Vol. VI., New Series, p. 29) therefore loses significance.]

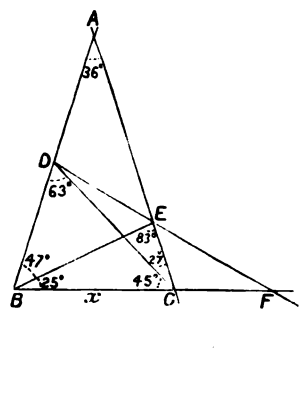
15474. (*Communicated by* ARTHUR ANSTEY, B.A., L.C.P.)—ABC is an isosceles triangle, base angles being 72°; ∠EBC = 25°, ∠DCB = 45°; DE is joined and produced to meet the base produced in F. Find the angle EFC.



Solutions (I.) *by* C. M. ROSS; (II.) *by* CONSTANCE I. MARKS, B.A.; (III.) *by* W. SCRIMGEOUR, M.A., B.Sc., *and* S. C. BAGCHI, B.A.

(I.) $$CD = \frac{x\sin 72°}{\sin 63°},$$

$$CE = \frac{x\sin 25°}{\sin 83°}.$$



Again $CED + CDE = \pi - 27°$,

$$\tan\tfrac{1}{2}(CED - CDE)$$
$$= \frac{CD - CE}{CD + CE}\cot\frac{27°}{2}$$
$$= \frac{\sin 72°\sin 83° - \sin 25°\sin 63°}{\sin 72°\sin 83° + \sin 25°\sin 63°}\cot 13\tfrac{1}{2}°$$
$$= \frac{\cos 11° + \cos 25° - \cos 38° + \cos 88°}{\cos 11° + \cos 25° + \cos 38° - \cos 88°}$$
$$= \frac{1{\cdot}1348237}{2{\cdot}6410463} \times 4{\cdot}1652998$$
$$= 1{\cdot}7892 \text{ (approximately)}$$
$$= \tan 60°\,48';$$

therefore $\frac{1}{2}(CED - CDE) = 60°\,48'$, $\frac{1}{2}(CED + CDE) = 76°\,30'$;

therefore $CDE = 15°\,42'$;

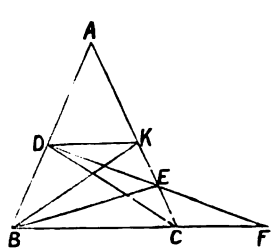
therefore $EFC = \pi - 108° - 27° - 15°\,42' = 29°\,18'$ (approximately).

(II.) Draw DK parallel to BC, and join BK. Then the triangle BCK is easily shown to be equal to the triangle DBC in every respect. Hence

$$\angle KBE = 20°, \quad \angle BKC = 63°.$$

Also $\angle KCB = 72°$ (given);

and $\left.\begin{aligned}\angle DCE &= 27°\\ \angle DKC &= 108°\\ \angle BEC &= 83°\end{aligned}\right\}$ (evidently).



By a well known theorem which we will call (X), $CK\cot 83° = CE\cot 63° - KE\cot 72°$,

Digitized by Google

and $\quad CK\cot 83° = KE\cot 20° - CE\cot 25°.$

By subtraction, $0 = CE(\cot 63° + \cot 25°) - KE(\cot 72° + \cot 20°)$; therefore

$$\frac{CE}{KE} = \frac{\cot 72° + \cot 20°}{\cot 63° + \cot 25°} = \frac{\cdot 3249197 + 2\cdot 7474774}{\cdot 5095254 + 2\cdot 1445069} \text{ (from Chambers' Tables)}$$

$$= \frac{3\cdot 0723971}{2\cdot 6540323}.$$

Let $\theta = \angle DEK$; then, by (X), $CK\cot\theta = KE\cot 27° - CE\cot 108°$,

$$5\cdot 7264294\cot\theta = 2\cdot 6540323\cot 27° - 3\cdot 0723971\cot 108°;$$

therefore $\quad \cot\theta = \dfrac{2\cdot 6540323 . 1\cdot 9626105 + 3\cdot 0723971 . \cdot 3249197}{5\cdot 7264294}$

(from Chambers' Tables)

$= 1\cdot 0839414$, approximately.

Using the usual methods for proportional parts, we find $\theta = 42° 41' 36''$ nearly; therefore $\angle EFC = 72° - 42° 41' 36''$ nearly $= 29° 18' 24''$ nearly.

[Rest in *Reprint*.]

Note on "Minimum Deviation through a Prism."

By R. Chartres.

(By kind permission of the *Philosophical Magazine*.)

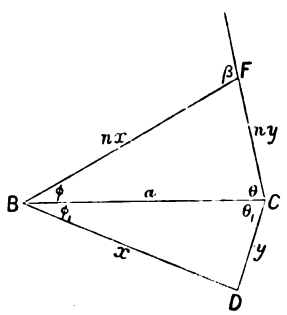
$\sin\theta = \mu\sin\theta_1$, $\quad \sin\phi = \mu\sin\phi_1$;

$\theta + \phi$ to be a minimum;

$\theta_1 + \phi_1 =$ constant.

$\sin\beta/\sin\phi = a/ny = \sin D/(n\sin\phi_1)$;

therefore $n\sin\beta = \mu\sin D =$ constant. Now, if ϕ_1 or θ_1 be small, n will practically = unity, while at the symmetrical position $n^2 = (1-\sin^2\phi_1)/(1-\mu^2\sin^2\phi_1)$; therefore $n =$ maximum at the symmetrical position; therefore $\beta =$ minimum; therefore deviation is a minimum there.



Or, without n, if ϕ_1 is small,

$$\phi - \phi_1 = (\mu - 1)\phi_1;$$

but $\theta - \theta_1 > (\mu-1)\theta_1$, decreasing with θ_1. Now $\theta_1 + \phi_1 =$ constant; therefore the increment $\phi_1 =$ decrement of θ_1; therefore in the expression $(\theta - \theta_1) + (\phi - \phi_1)$ the increase in $(\phi - \phi_1)$ is less than the decrease in $(\theta - \theta_1)$ as ϕ_1 increases up to its value at the symmetrical position; therefore the expression or deviation is then a minimum.

15481. (Lt.-Col. Allan Cunningham, R.E.)—Factorize completely $N = 96^{18} + 1$.

Solution by the Proposer.

$$\text{Let } N = Y^{18} + 1 = \frac{Y^{18}+1}{Y^6+1}\cdot\frac{Y^6+1}{Y^2+1}(Y^2+1) = N_3 . N_1 . N_0 \text{ (suppose)}.$$

Here taking $Y = 96$, gives $N_0 = 96^2 + 1 = 13 . 709$. Also, when $Y = 6y^2$, then N_1, N_3 are Sext-Aurifeuillians, and can be resolved into two factors L, M algebraically (by formulæ given in Ed. Lucas's *Sur la Série récurrente de Fermat*, Rome, 1879, p. 6) as follows:

$$N_1 = L_1 . M_1; \quad L_1 = P_1 - Q_1, \ M_1 = P_1 + Q_1;$$

$$P_1 = 1 + 3Y_1 + 6Y_1^2, \ Q_1 = 6y_1(1 + Y_1).$$

Taking $y_1 = 4$ gives $Y_1 = 16$;

$$P_1 = 9505, \ Q_1 = 3328; \quad L_1 = 7177, \ M_1 = 11833;$$

therefore $\quad N_1 = 7177 . 11833.$

Next, $\quad Y^{18} = 96^{18} = 6^6(6 . 4^3)^{12} = (6 . 384^2)^6 = Y_3^6;$

$$Y_3 = 6 . 384^2; \quad y_3 = 384.$$

Then $N_3 = (1 + Y_3^6)/(1 + Y_3^2)$, a Sext-Aurifeuillian.

$$N_3 = L_3 M_3, \quad L_3 = P_3 - Q_3, \quad M_3 = P_3 + Q_3;$$

$$P_3 = 1 + 3Y_3 + Y_3^2, \quad Q_3 = 6y_1(1 + Y_3);$$

therefore $\quad P_3 = 1 + 18 . 384^2 + 36 . 384^4 = 782{,}760{,}443{,}905;$

$$Q_3 = 6 . 384(1 + 6 . 384^2) = 2{,}038{,}434{,}048;$$

$$L_3 = 700{,}722{,}009{,}857, \quad M_3 = 784{,}798{,}877{,}953;$$

Next a table of solutions of the congruence $(y^6 + 1)/(y^2 + 1) \equiv 0 \pmod p$ up to $p > 10{,}000$, prepared by the present writer (and which it is hoped will be published shortly), shows that N has the divisors 37, 73, 397, 613, and no more $< 10{,}000$. Here by actual trial division

$$L_3 = 37 . 397 . 53150113; \quad M_3 = 73 . 613 . 17537797;$$

and the large factors in L_3, M_3 must be primes (because the table alluded to shows that N_3 has no more divisors $> 10{,}000$).

Collecting the above results $N = (L_3 M_3)(L_1 M_1) N_0$, and the factorisation is complete. Note that N contains 36 figures.

15403. (A. M. Nesbitt, M.A.)—A triangle is inscribed in a circle, and the squares on its sides are proportional to the perpendiculars from the opposite angles on a tangent to the circle. Prove that one side is a diameter.

Solutions (I.) *by* R. F. Davis, M.A., Professor Joseph Brown, *and others*; (II.) *by* S. C. Bagchi, B.A., *and the* Proposer; (III.) *by* Professor Sanjána, M.A.

(I.) Let AL, BM, CN be perpendiculars upon the tangent at any point P to the circum-circle of ABC. Then, since $PA^2 = 2R . AL$, and $BC . PA \pm CA . PB \pm AB . PC = 0$, therefore $\Sigma BC\sqrt{(AL)} = 0$, universally. In this case $\Sigma(\pm BC^2) = 0$; and the triangle ABC is right-angled.

(II.) Taking the inscribed triangle as that of reference, the equation to the circle is $a/x + b/y + c/z = 0$. The tangent at any point (f, g, h) of the circle is $lx + my + nz = 0$ where $lf^2 = a$, $mg^2 = b$, $nh^2 = c$.

Let $\Delta_1^2 = l^2 + m^2 + n^2 - 2mn\cos A - 2nl\cos B - 2lm\cos C$. By the conditions of the problem $\lambda a^2 = ap_1/(\Delta_1 f^2)$, $\lambda b^2 = bp_2/(\Delta_1 g^2)$, $\lambda c^2 = cp_3/(\Delta_1 h^2)$. But $ap_1 = bp_2 = cp_3 = 2$(area of ABC); therefore $\pm af = \pm bg = \pm ch$. Now of f, g, h two must be of the same sign, Take h negative and f, g both positive. Then, since $a/f + b/g + c/h = 0$, $a^2 + b^2 = c^2$; therefore C is a right angle, and AB is a diameter.

[Rest in *Reprint*.]

15449. (James Blaikie, M.A.)—If $u_1, u_2, u_3, \ldots, u_n$ be a series subject to the conditions (1) $u_1 = 1$, (2) $u_n = u_2 u_{n-1} + u_{n-2}$, prove the relations (3) $u_n = u_r u_{n-r+1} + u_{r-1}u_{n-r}$, (4) $u_{2r-1} = u_r^2 + u_{r-1}^2$,

(5) $u_{2r} = (u_{r+1}^2 - u_{r-1}^2)/u_2$, (6) $\Sigma_n u = (u_n + u_{n+1} - u_1)/u_2$.

This Question is in part a generalization of Question 15229. When $u_2 = 2$, the series becomes 1, 2, 5, 12, 29, ..., which is useful in connection with the solution of Question 15414.

Solution by the Proposer.

By (2) $\quad u_n = u_2 u_{n-1} + u_{n-2} = u_2(u_2 u_{n-2} + u_{n-3}) + u_{n-2}$

$$= (u_2^2 + 1)u_{n-2} + u_2 u_{n-3} = u_3 u_{n-2} + u_2 u_{n-3} = \ldots$$

$$= u_r u_{n-r+1} + u_{r-1}u_{n-r} \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (3)$$

Substituting $2r-1$ for n, we obtain

$$u_{2r-1} = u_r^2 + u_{r-1}^2 \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (4)$$

Substituting $2r$ for n,

$$u_{2r} = u_r u_{r+1} + u_{r-1}u_r = (u_{r+1} + u_{r-1})(u_{r+1} - u_{r-1})/u_2 \text{ by (2)}$$

$$= (u_{r+1}^2 - u_{r-1}^2)/u_2 \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (5).$$

Again by (2) we have

$$u_{n+1} - u_{n-1} = u_2 u_n, \quad u_n - u_{n-2} = u_n u_{n-2}, \ \ldots, \ u_3 - u_1 = u_2 u_2, \quad u_2 = u_2 u_1.$$

Summing, we obtain

$$u_{n+1} + u_n - u_1 = u_2 \Sigma_n u \text{ or } \Sigma_n u = (u_{n+1} + u_n - u_1)/u_2 \ldots\ldots\ldots (6).$$

15165. (Professor Sanjána, M.A.).—Show that, when $6n + 3$ is not a power of 3, $(x^{6n+3} + 1)/(x^3 + 1)$ has three factors at least, n being a positive integer and $3x$ a perfect square.

Note by the Proposer.

When $6n + 3 = 3^k$, I find, by ordinary methods, that the number of algebraical factors of $(x^{6n+3} + 1)/(x^3 + 1)$ is $2(k-1)$. Thus, for instance,

$$(x^9 + 1)/(x^3 + 1) = x^6 - x^3 + 1 = (x^3 - xy + 1)(x^3 + xy + 1),$$

where $y^2 = 3x$.

Also $(x^{27} + 1)/(x^3 + 1) = (x^6 - x^3 + 1)(x^{18} - x^9 + 1)$, and each bracket on the right side has two factors, as shown above. So also

$$(x^{81} + 1)/(x^3 + 1) = (x^6 - x^3 + 1)(x^{18} - x^9 + 1)(x^{54} - x^{27} + 1).$$

The process is clearly general.

QUESTIONS FOR SOLUTION.

15499. (Lt.-Col. Allan Cunningham, R.E. — *Revised*.) — Let $N = 111\ldots11$ consist of q^n units in the scale of $r = mq + 1$, q being *prime*; then $N = Mq^n$.

15516. (Hon. G. R. Dick.)—The surface whose co-ordinates at any point are given by

$$x = \rho\cos\phi, \ y = \rho\sin\phi, \ z = b\phi + c\int[(\rho^2 + b^2)/(\rho^2 - c^2)]^{\frac{1}{2}}\, d\rho/\rho$$

is a minimum surface: exhibit them in Monge's form; also the surface

$$\sin z = \sinh x \sinh y.$$

15517. (C. M. Ross.)—Eliminate x, y, z from the equations

$$ax^2 + by^2 + cz^2 + 2fyz + 2gzx + 2hxy = 0,$$

$$a'x^2 + b'y^2 + c'z^2 + 2f'yz + 2g'zx + 2h'xy = 0,$$

$$a''x^2 + b''y^2 + c''z^2 + 2f''yz + 2g''zx + 2h''xy = 0,$$

expressing the eliminant as the equation of a determinant to zero.

15518. (James Blaikie, M.A.)—A pack of 52 cards is shuffled in the following way:—The 2nd card is placed over the 1st, the 3rd under the 1st, the fourth over the 2nd, the 5th under the 3rd, and so on alternately.

Digitized by Google

Find after how many such shuffles the pack will have regained its original order. Solve a similar question for packs of 10, 24, 30, 32 cards, and establish any general principles.

15519. (Professor SANJÁNA, M.A.)—Find the condition that

$$x^9 + ax^7 + bx^5 + cx^3 + d$$

may be divisible by $(x+h)^3$. Also determine p, q, r in order that

$$x^9 + px^7 + qx^5 + rx^3 + 1$$

may be divisible by $(x-1)^3$ or $(x+1)^3$.

15520. (ROBT. W. D. CHRISTIE.)—Solve generally

$$A^3 + B^2 = (a^3 + b^2)(c^2 + d^2)$$

in integers.

15521. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—If σN denote the sum of the sub-factors of N (including 1, but excluding N), obtain some solutions of $\sigma N = X^2$ (an *even* square).

15522. (D. BIDDLE.)—Prove that, if a number (N) terminate in 2, 3, 7 or 8, it cannot be divided without remainder in such a way as to make the difference between the quotient and divisor a multiple of 5. Also state the general rule for finding the impossible terminals of N, where the modulus given is other than 5 (as above).

15523. (A. M. NESBITT, M.A.)—A man, who has m hats of his own in his hall, is visited by n friends, each wearing a hat. They leave their hats with those of their host. When they are going away they are unfortunately not in a condition to distinguish between one hat and another. Find the chance that no guest takes away his own hat.

15524. (R. CHARTRES.) (Suggested by Question 15447).—Find the mean value of the angle subtended by BC at all points of the area BAC, (1) when BAC is a segment of a circle and $A = \pi/n$, (2) when BAC is any triangle.

15525. (G. H. HARDY, M.A.)—Find the area of the diagonal triangle of a quadrilateral, given the areal equations of its sides.

15526. (Professor NEUBERG.)—Soient M un point fixe et N un point mobile d'une hyperbole équilatère. Trouver le lieu du point d'intersection de la normale en N à l'hyperbole avec la perpendiculaire élevée en M sur la corde MN.

15527. (L. ISSERLIS.)—Two conics touch at O. The distances of their centres from the tangent at O are y, Y and their radii of curvature at O are ρ, R. The diameter of the first through O meets it again in A and the tangent at A meets the second conic in P, Q. Prove that, if $1/y - 1/Y = 2/\sqrt{(RY)}$ then the area of the triangle OPQ is $4\rho^{\frac{1}{2}} R^{-\frac{1}{2}} Y^{\frac{1}{2}}$.

15528. (A. M. NESBITT, M.A.)—A triangle ABC is circumscribed by a hyperbola whose asymptotes are parallel to the bisectors of the angle A and its supplement. Find the angle at which the tangent at A cuts the opposite side.

15529. (R. TUCKER, M.A.)—AB is a diameter and C a variable point on the circumference of a circle. Find the locus of the "S"-points of ACB. The perpendicular from C on the diameter is CD. Find the locus of the "S"-points of CDB, CDA, and the envelope of the join of the "S"-points.

15530. (C. E. YOUNGMAN, M.A.)—Triangles A'BC, B'CA, C'AB directly similar being drawn on the sides of ABC, suppose them such that perpendiculars from A, B, C on the sides of A'B'C' meet at a point P, whose isogonal in ABC is P'. Then it is well known that the loci of A', B', C', P' are four concurrent lines, perpendicular to the sides and Lemoine line of ABC. Prove that, if we read parallel instead of perpendicular, the proposition still holds; but that, in both cases, if we make A'CB, B'CA, C'AB the similar system, the locus of P' will be the same as that of A'.

15531. (R. F. DAVIS, M.A.)—If $O_1, O_2, \ldots, O_n$ are fixed points, and $\kappa_1^2, \kappa_2^2, \ldots, \kappa_n^2$ are fixed constants, and

$$O_1P.O_1P_1 = \kappa_1^2, \quad O_2P_1.O_2P_2 = \kappa_2^2, \ \ldots, \ O_nP_{n-1}.O_nP_n = \kappa_n^2,$$

then, if P describe any curve, P_n describes an inverse of a second curve equal in all respects but position to the first. [Repeated inversion does not indefinitely increase the degree of a curve.]

15532. (*Communicated by* R. F. WHITEHEAD, B.A.)—The ends of a room are 12 ft. square and its length is 30 ft. Show that the shortest path a spider situated 3 ft. from the ceiling on the mid-line at one end of the room can take towards a fly at the diametrically opposite point on the other end wall is about 41 ft. 9½ in.

15533. (Professor COCHEZ.)—On donne une circonférence graduée comme un cadran d'horloge; à chaque division est appliqué un poids proportionnel au numéro de la division. Trouver le centre de gravité du système.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

9345. (Professor HAUGHTON, F.R.S.)—A boiler contains water and steam at 4 atmospheres' pressure; if the pressure be suddenly diminished, what part does the water take in the explosion that occurs? If the pressure be increased up to 500 atmospheres, how do the energies stored up in the steam and water vary?

9537. (Professor PLAMENEWSKI, M.A.)—The rate of interest increases gradually, the rate of increase at any time varying as the rate of interest; interest being paid every instant, the principal and the rate of interest are both doubled in p years. Find the initial rate per cent. per annum.

10178. (E. LEMOINE.)—Soient ABC, A'B'C' deux triangles; a, b, c, a', b', c' les longueurs de leurs côtés; soient, en coordonnées normales, ABC étant le triangle de référence, $\beta\lambda + \gamma = 0$, $\gamma\mu + \alpha = 0$, $\alpha\nu + \beta = 0$ les équations des parallèles à B'C', C'A', A'B' menées respectivement par A, B, C; soient aussi, A'B'C' étant le triangle de référence, $\beta\lambda' + \gamma = 0$, $\gamma\mu' + \alpha = 0$, $\alpha\nu' + \beta = 0$ les équations des parallèles à BC, CA, AB menées respectivement par A', B', C'. Cela posé, démontrer que, si l'on a identiquement

$$\cos A\,(b - \lambda c)(b\mu\nu - \mu a + c) + \cos B\,(c - \mu a)(c\nu\lambda - \nu b + a) + \cos C\,(a - \nu b)(a\lambda\mu - \lambda c + b) = 0,$$

on aura aussi identiquement

$$\cos A'\,(b' - \lambda' c')(b'\mu'\nu' - \mu' a' + c') + \cos B'\,(c' - \mu' a')(c'\nu'\lambda' - \nu' b' + a') + \cos C'\,(a' - \nu' b')(a'\lambda'\mu' - \lambda' c' + b') = 0.$$

10230. (Professor MORLEY.)—In the cardioide let parallel tangents touch at PQR; then we know (Chasles' theorem) that the mean centre of PQR is fixed, being in fact the triple focus. Show that (1) QR, RP, PQ subtend equal angles at the cusp (this point in a triangle might be called isoptic centre); (2) PQR is of constant area; (3) the concentric ellipse through PQR is of given axes; (4) the tangents meet the concentric circle through the vertex in two equilateral triangles; (5) from the corners of one of these triangles draw the other six tangents—these meet the circle again at a regular hexagon, the twelve new tangents from these points meet at a regular 12-gon, and so on; (6) the sum of the common tangents drawn to two equal concentric cardioides is zero; (7) the sum of the radii of curvature at PQR is zero; (8) the loci of orthocentre, circum-centre, nine-point centre of PQR are circles; (9) the locus of intersection of perpendicular tangents or normals to a cardioide is a circle and a limaçon. [Much of this holds good also for any epicycloid.]

10340. (Professor SYLVESTER.)—On a circle $2r$ points are set at equal distances from one another. How many distinct coloured patterns can be formed when one moiety of the points are coloured blue and the other moiety red? [A problem in intercalations of which the above presents an image of the simplest case occurs in the Proposer's treatment of two binary quantics according to Hilbert's method.]

10686. (Sir R. S. BALL, LL.D., F.R.S.)—In Laplace's theory of Jupiter's satellites, the mass of Jupiter is the unit of mass, the equatorial radius of Jupiter is the unit of length, and the gravitation of two unit masses situated at a unit distance is the unit of force. Laplace says that the square of the mean motion of Jupiter multiplied into the cube of his mean distance is *equal* to the mass of the Sun. Determine the number of mean solar seconds in Laplace's unit of time.

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. IV. (New Series) of the "Mathematical Reprint," is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, February 11th, 1904.—Prof. H. Lamb, President, in the Chair.

Messrs. R. C. Maclaurin, E. M. Radford, P. W. Wood, J. W. Sharpe were elected members.

Mr. Z. U. Ahmad was admitted into the Society.

The President referred to the loss sustained by the Society and by mathematicians in general by the death of Dr. Salmon, and gave an account of his scientific work.

The following papers were communicated:—

"On the Roots of the Equation $\frac{1}{\Gamma(x+1)} = c$": Mr. G. H. Hardy.

"Some Extensions of Abel's Theorem on Power Series on the Circle of Convergence": Mr. G. H. Hardy.

"On Group-Velocity": Prof. H. Lamb.

"On a certain Double Integral": Prof. A. C. Dixon.

"On an Appropriate Form of Conductor for a Moving Point Singularity": Prof. A. W. Conway.

"On the Irreducibility of Perpetuant Types": Mr. P. W. Wood.

"The Expression of $\int_0^\infty$ cn $xte^{-t}dt$ and other Integrals by means of Continued Fractions": Prof. L. J. Rogers.

EDUCATIONAL AGENTS,

143 CANNON STREET LONDON, E.C.

In reply to repeated requests from Schoolmasters for an issue of Cusack's Art Publications in the least expensive form, The City of London Book Depot will deliver a limited number of Sets carriage paid for one payment of 25/-, or for a first payment of 7/6, followed by 4 monthly payments of 5/-.

This Set consists of one copy of the following:—

Freehand I.
" II.
Blackboard Drawing.
Model Drawing.
Shading.
Plane Geometry.
Solid "
Perspective.
Photographic Representations of Ornament.
Geometrikon.

Nine handsome Volumes,
9½ ins. high,
7½ ins. wide,
¾ in. thick.

The published price is - 36/6
Carriage costs - 1/6
38/-
Special offer as above - 25/-
Net saving, 13/- for a limited time of one month only.

Cusack's Art Publications.

PUBLISHED BY THE

CITY OF LONDON BOOK DEPOT

AT A LOWER PRICE.

A limited number of Sets in FULL BOUND CLOTH.

Nine Vols. and One Box of Geometrikon

For a Cash Payment of **25/-.**
Or in monthly instalments amounting to **27/6.**

All Cheques and Postal Orders should be made payable to The City of London Book Depot.

(Date).....190...

THE CITY OF LONDON BOOK DEPOT,
White Street, London, E.C.

CASH PAYMENT.—Order Form.

I enclose 25/-, being full payment for One Set of Cusack's Art Publications.

(Signed).....

(Address).....

.....

MONTHLY PAYMENTS.—Order Form.

All Cheques and Money Orders should be made payable to The City of London Book Depot.

(Date).....190...

THE CITY OF LONDON BOOK DEPOT,
White Street, London, E.C.

I enclose 7/6. Please send me the Set of Cusack's Art Publications, for which I agree to make to you 4 additional payments of 5/- each. The first monthly payment to be made upon delivery of the complete Set, and the succeeding payments on the corresponding day of each month following. Until such payments are complete, I engage that the Volumes, not being my property, shall not be disposed of by sale or otherwise.

BOOKS FOR COLLECE OF PRECEPTORS' EXAMINATIONS 1904.

LATIN AND GREEK CLASSICS.

CAESAR.—GALLIC WAR, BOOKS II., III. By A. H. ALLCROFT, M.A., and W. F. MASOM, M.A., and others. 1s. 6d. each. Vocabulary, 1s. each.

CAESAR.—GALLIC WAR, BOOK IV., 20-END; and V., 1-23. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond., and others. 1s. 6d. Vocabulary, 1s.

CICERO.—PRO ARCHIA. By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Camb. 1s. 6d. Vocabulary, 1s.

EURIPIDES.—ALCESTIS. By J. H. HAYDON, M.A. Camb. 1s. 6d.

HOMER.—ODYSSEY, BOOKS IX., X. By J. H. HAYDON, M.A. Camb. and Lond., and A. H. ALLCROFT, M.A. Oxon. 2s. 6d.

HORACE.—ODES, BOOK I. By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. 1s. 6d. Vocabulary, 1s.

VERGIL.—AENEID, BOOK I. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.

SHAKESPEARE.—RICHARD II. By Prof. W. J. ROLFE, D.Litt. 2s.

SPENSER.—THE FAERIE QUEENE, BOOK I. By W. H. HILL, M.A. 2s. 6d.

LATIN GRAMMAR AND READERS.

LATIN AUTHORS, MATRICULATION SELECTIONS FROM. By A. F. WATT, M.A. Oxon., and B. J. HAYES, M.A. Lond. and Camb. 2s. 6d.
CONTENTS: Introduction (History, Literature and Antiquities) — Extracts (graduated) long enough to be interesting—Notes—Full Vocabulary.
Designed to provide practice in reading Latin with a view to translation at sight.

LATIN COMPOSITION.—By A. H. ALLCROFT, M.A. Oxon., and J. H. HAYDON, M.A. Lond. and Camb. 2s. 6d.

LATIN COURSE, JUNIOR (or THE PRECEPTORS'). By B. J. HAYES, M.A. Lond. and Camb. 2s. 6d.

LATIN GRAMMAR, THE TUTORIAL. By B. J. HAYES, M.A. Lond. and Camb., and W. F. MASOM, M.A. Lond. and Camb. 3s. 6d.

LATIN READER, THE TUTORIAL. With Vocabulary. 2s. 6d.

LATIN READER, JUNIOR (or THE PRECEPTORS'). By E. J. G. FORSE, M.A. Lond. and Camb. 1s. 6d.

MATHEMATICS.

GEOMETRY, THE JUNIOR. By W. P. WORKMAN, M.A. 2s. 6d.
[In preparation.

ALGEBRA, THE NEW MATRICULATION. With a Supplement on Graphs. By RUPERT DEAKIN, M.A. Lond. and Oxon. 3s. 6d.

ALGEBRA, THE TUTORIAL. Advanced Course. By WM. BRIGGS, LL.D., M.A., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 6s. 6d.

ARITHMETIC, THE TUTORIAL. By W. P. WORKMAN, M.A. B.Sc., Headmaster of Kingswood School, Bath. Second Edition. 4s. 6d.

ARITHMETIC, THE SCHOOL. An Edition of "The Tutorial Arithmetic" adapted for School use. With or without Answers. By W. P. WORKMAN, M.A., B.Sc. 3s. 6d.

ARITHMETIC, THE JUNIOR. Adapted from "The Tutorial Arithmetic." By R. H. CHOPE, B.A. With or without Answers. 2s. 6d.

CO-ORDINATE GEOMETRY (THE CONIC). By J. H. GRACE, M.A. Camb., and F. ROSENBERG, M.A. Camb., B.Sc. Lond. 3s. 6d.

EUCLID. By RUPERT DEAKIN, M.A. Lond. and Oxon. With a Preliminary Course of Drawing and Measurement, and Problems in Practical Geometry. 2s. 6d. BOOKS I., II., 1s. BOOKS I.-IV., 2s. 6d. BOOKS VI., V., XI., 1s. 6d.

GRAPHS: THE GRAPHICAL REPRESENTATION OF ALGEBRAIC FUNCTIONS. By C. H. FRENCH, M.A., and G. OSBORN, M.A., Mathematical Masters of the Leys School, Cambridge. 6d. Limp cloth, 9d.

MENSURATION OF THE SIMPLER FIGURES. By WM. BRIGGS, LL.D., M.A., F.R.A.S., and T. W. EDMONDSON, B.A., Ph.D. 2s. 6d.

THE RIGHT LINE AND CIRCLE, CO-ORDINATE GEOMETRY. By WM. BRIGGS, LL.D., M.A., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 3s. 6d.

TRIGONOMETRY, JUNIOR (or THE PRECEPTORS'). By WM. BRIGGS, LL.D., M.A., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. 2s. 6d.

APPLIED SCIENCES, &c.

BOOK-KEEPING, JUNIOR (or THE PRECEPTORS'). By T. C. JACKSON, B.A., LL.B. 1s. 6d.

HYGIENE, FIRST STAGE. By R. A. LYSTER, B.Sc., D.Ph. 2s.

HYGIENE, ADVANCED. By A. E. IKIN, B.Sc., and R. A. LYSTER, M.B., B.Sc., D.Ph. 3s. 6d.

FRENCH GRAMMARS AND READERS.

FRENCH COURSE, THE MATRICULATION. By ERNEST WEEKLEY, M.A. Lond. and Camb. 3s. 6d.

FRENCH COURSE, JUNIOR (or THE PRECEPTORS'). By E. WEEKLEY, M.A. Lond. and Camb. Second Edition. 2s. 6d.

FRENCH GRAMMAR, THE TUTORIAL. By ERNEST WEEKLEY, M.A. Lond. and Camb., and A. J. WYATT, M.A. Lond. and Camb. 4s. 6d.

FRENCH PROSE READER. Edited by S. BARLET, B. ès Sc., and W. F. MASOM, M.A. Lond and Camb. With Notes and Vocabulary. 2s. 6d.

FRENCH READER, JUNIOR (or THE PRECEPTORS'). With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. Second Edition. 1s. 6d.

FRENCH READER, THE MATRICULATION. Containing Prose, Verse, Notes, and Vocabulary. By J. A. PERRET, Officier d'Académie, University of France; Examiner and Member of the Board of Mediæval and Modern Languages in the University of London. 2s. 6d. KEY, 2s. 6d. net.

ENGLISH GRAMMAR AND LITERATURE.

ENGLISH COURSE, MATRICULATION. By W. H. LOW, M.A. Lond., and JOHN BRIGGS, M.A. Camb., F.Z.S. 3s. 6d.
This book contains Grammar, Analysis, Composition, Précis-writing, and Paraphrase.

ENGLISH HISTORY, THE INTERMEDIATE TEXT-BOOK OF. By C. S. FEARENSIDE, M.A. Oxon., and A. JOHNSON EVANS, M.A. Camb.
Volume II.—1485 to 1603; Volume III.—1603 to 1714; Volume IV.—1714 to 1837. 4s. 6d. each Volume.

ENGLAND, THE TUTORIAL HISTORY OF. (To 1901). By C. S. FEARENSIDE, M.A. Oxon. 4s. 6d.

ANCIENT HISTORY.

GREECE, THE TUTORIAL HISTORY OF. By W. J. WOODHOUSE, M.A. Oxon., Professor of Greek in the University of Sydney. 3s. 6d.

ROME, THE TUTORIAL HISTORY OF. (To 14 A.D.) By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. and Camb. 3s. 6d.

SCIENCES.

BOTANY, TEXT-BOOK OF. By J. M. LOWSON, M.A., B.Sc. 6s. 6d.

BOTANY, FIRST STAGE. By A. J. EWART, D.Sc., Ph.D., F.L.S. Second Edition. 2s.

CHEMISTRY, THE TUTORIAL. By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WM. BRIGGS, LL.D., M.A., F.C.S. Part I., NON-METALS. Part II., METALS. 3s. 6d. each.

MAGNETISM AND ELECTRICITY, FIRST STAGE. By R. H. JUDE, M.A., D.Sc. 2s.

PHYSICS, MATRICULATION: HEAT, LIGHT, AND SOUND. By R. W. STEWART, D.Sc. Lond., and JOHN DON, M.A., B.Sc. 4s. 6d.

PHYSICS, THE TUTORIAL. By R. WALLACE STEWART, D.Sc. Lond., and E. CATCHPOOL, B.Sc. Lond. In Four Volumes:—SOUND, LIGHT, MAGNETISM and ELECTRICITY. 3s. 6d. each Vol. HEAT, 6s. 6d.

ZOOLOGY, TEXT-BOOK OF. By H. G. WELLS, B.Sc. Lond., F.Z.S., F.C.P. Enlarged and Revised by A. M. DAVIES, B.Sc. 6s. 6d.

MECHANICS.

DYNAMICS, THE TUTORIAL. By WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Second Edition (Revised and Enlarged). 3s. 6d.

HYDROSTATICS, THE MATRICULATION: An Elementary Text-Book of Hydrostatics. By WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Second Edition. 2s. KEY, 2s. net.

MECHANICS, JUNIOR (or THE PRECEPTORS'). By F. ROSENBERG, M.A. Camb., B.Sc. 2s. 6d.

STATICS, THE TUTORIAL. By WM. BRIGGS, LL.D., M.A., and G. H. BRYAN, Sc.D., F.R.S. Third Edition (Revised and Enlarged). 3s. 6d.

Those Books underlined are specially suitable for Candidates for Second Class [or Junior] Certificates.

Complete Catalogues, and List of Books Classified for each of the following Examinations, may be had free on application:—
LONDON UNIVERSITY, Cambridge and Oxford Local, and COLLEGE OF PRECEPTORS', Royal University of Ireland, and Intermediate Education Board, Scotch Leaving Certificate, Teachers' Certificate, Board of Education (South Kensington), and other Examinations.

LONDON: W. B. CLIVE, UNIVERSITY TUTORIAL PRESS WAREHOUSE, 157 DRURY LANE, W.C.

Printed by C. F. HODGSON & SON, 2 Newton Street, High Holborn, London, W.C.; and Published by FRANCIS HODGSON, 89 Farringdon Street, London, E.C.
[Entered at the New York Post Office as Second Class matter.]

THE

EDUCATIONAL TIMES,

AND

Journal of the College of Preceptors.

Vol. LVII.] New Series, No. 516. APRIL 2, 1904.

{*Published Monthly, price, to Non-Members, 6d.; by Post, 7d.*
Annual Subscription, 7s.

COLLEGE OF PRECEPTORS.—

(Bloomsbury Square, W.C.)

The next Monthly Meeting of the Members will take place on Wednesday, the 20th of April, at 7.30 p.m., when Prof. J. ADAMS, M.A., B.Sc., F.C.P., will read a Paper on "How to be Interesting in Teaching."

A Discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

C. R. HODGSON, B.A., *Secretary.*

COLLEGE OF PRECEPTORS.—

EXAMINATIONS, 1904.

1. DIPLOMAS.—The next Examination of Teachers for the Diplomas of the College will commence on the **30th of August.**

2. PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH. — The next Practical Examination will be held in **May,** 1904.

3. CERTIFICATE EXAMINATIONS. — The Midsummer Examination for Certificates will commence on the 28th of June.

4. LOWER FORMS EXAMINATIONS. — The Midsummer Examination will commence on the 28th of June.

5. PROFESSIONAL PRELIMINARY EXAMINATIONS.—These Examinations are held in March and September. The Autumn Examination in 1904 will commence on the 6th of September.

6. INSPECTION AND EXAMINATION OF SCHOOLS.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

PRIZES.

Diploma Examination.—The following Prizes will be offered for competition:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5. The Doreck Scholarship of £20 will be awarded on the results of the Christmas Examination.

Certificate Examination.—Prizes will be awarded as follows, subject to the conditions stated in the Regulations:—

First Class.—Four Prizes for General Proficiency; two each for Classics, Mathematics, Modern Languages, Natural Sciences, and English subjects; one for Scripture History.

Second Class.—Four Prizes for General Proficiency.

Third Class.—Four Prizes for General Proficiency.

Two Medals will also be awarded to the best Candidates in Shorthand.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

PROFESSIONAL PRELIMINARY

EXAMINATIONS. — The COLLEGE of PRECEPTORS will hold an Examination for Certificates recognized by the Board of Education, the Incorporated Law Society, the General Medical Council, the Royal College of Physicians of London, the Royal College of Surgeons of England, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, on the 6th, 7th, and 8th of September, 1904.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool, Manchester.

Prospectuses can be obtained from the PRINCIPAL.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.

JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Telegrams—"Educatorio, London."

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal—Miss STANSFELD
(Vice-President of the Ling Association of Gymnastic Teachers, Teacher of Gymnastics in the Cambridge Teachers' College, Froebel Educational Institute, Bedford Kindergarten College, Bedford High School, &c.).

THE object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Fencing, Lacrosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer.

There is an increasing demand for Teachers thoroughly trained on this system.

For Prospectus apply—37 Lansdowne Road, Bedford.

ROYAL HOLLOWAY COLLEGE

New Secondary School Catalogue post free on application.

Historical Eng. Grammar

By **BERTHA M. SKEAT, Ph.D.** An Introduction to the History of the English Language suitable for Middle Forms, &c. ***2s. 6d.***

CONTENTS:—1. Where the English Language came from. 2. The English Tongue in England. 3. Growth of Vocabulary; Borrowings. 4. Vowel Changes. 5. Consonantal Changes. 6. Spelling. 7. Accentuation. 8. Derivation. 9. Inflexion.

Specimens of English Prose

From Malory to Carlyle.

By **BERTHA M. SKEAT, Ph.D.** The Book is divided into Eight Sections—Religion, Philosophy, Education, Essays, History, Biography, Diaries and Letters, Romances and Novels. ***1s. 6d.***

The ***OXFORD MAGAZINE*** says:—"Miss Skeat has carried out a noteworthy and useful plan. A volume of this kind has long been wanted; we are glad that the gap is so well filled."

English Literature

A School History of English Literature. By **ELIZABETH LEE.** With Introduction by **E. K. CHAMBERS, M.A.**

Vol. I.—**Chaucer to Marlowe.** 206 pages. ***1s. 6d.***

Vol. II.—**Shakespeare to Dryden.** 232 pages. ***2s.***

The ***ATHENÆUM*** says:—"The book has many merits."

Elements of English Prose

A new Theoretical and Practical Treatise on English Composition. ***2s. 6d.*** By **W. A. BROCKINGTON, M.A.** (*Specimen copy, **1s. 9d.** post free.*)

The ***ACADEMY*** says:—"The chapter on the use of stops is admirable. The functions of the comma have never been set forth more lucidly, more completely, or on more general, and therefore comprehensible, principles."

Précis Writing

For Army Classes, Civil Service Candidates, &c. Edited by **H. LATTER, M.A.**, Cheltenham College.

This is the most complete volume of Précis Exercises in the market. It contains a large number of selected Civil Service and Army Examination Papers, with a Practical Introduction and a Worked Example. Candidates for the Army, the Civil Service, and the London University Matriculation will find the book particularly useful. ***3s. 6d.***

Survey of the British Empire

Historical, Geographical, Commercial.

Just Published. 350 pp. ***2s.***

This new volume gives a very thorough, interesting, and up-to-date account of the British Empire in its present extent, and of the way in which it has been built up. In the case of each of the great divisions of the Empire, a survey of the leading facts of its history is followed by an account of its physical and political geography.

Survey of British History

By **G. TOWNSEND WARNER, M.A.**

Ninth Edition. 278 pp. ***1s. 6d.***

The ***JOURNAL OF EDUCATION*** says:—"Mr. Warner's book is far and away ahead of most short histories for school use."

The ***OXFORD MAGAZINE*** says:—"For Mr. Warner's work we have nothing but praise."

The ***EDUCATIONAL NEWS*** says:—"The whole is written and illustrated with rare judgment and clearness."

MESSRS. LONGMANS & CO.'S LIST.

JUST PUBLISHED. 8vo, 3s. 6d.

Interleaved with ruled paper throughout, and with additional paper bound up at the end.

GREEK SYNTAX.

By G. A. FLOYD, B.A.,

Assistant Master at Tonbridge School.

This book is not intended to be an exhaustive Greek Syntax, but to provide as much as a boy may be expected to know before he reaches the Sixth Form.

Experience as a teacher has shown the Author that boys may learn by rote a large amount of Syntax with very little practical use for their own Composition and Translation. He believes that the best way to teach them to write correctly and idiomatically is to provide them with an interleaved book, such as this is, where they may enter instances of the various constructions they have learned as they come across them in their reading, and it is with this object that he has compiled this work.

"We heartily approve of the plan of the book, which ought to appeal to the interest of an intelligent boy."—*School.*

"Sure to be very helpful."—*Educational Times.*

CAMBRIDGE ENGLISH CLASSICS.

A Series of Editions of Classical English Writers, based upon a Uniform Plan, and giving faithful reproductions of the Original Texts. At present it is not intended that the Writings shall be accompanied by Prefaces, or Notes other than purely Textual and Bibliographical. The volumes are intended for the reader and lover of English Literature, as well as for the purposes of reference and the use of Scholars. Prospectus, with Specimen Pages, will be sent on application.

NOW READY. Large crown 8vo, 4s. 6d. net.

THOMAS HOBBES.—LEVIATHAN; or, the Matter, Forme, and Power of a Commonwealth, Ecclesiasticall and Civill. The Text edited by A. R. WALLER.

Athenæum.—"Praise of appearance, type, and paper cannot be too high, while the price of the volume is most moderate."

Oxford Magazine.—"The Cambridge University Press is to be congratulated on its happy idea of issuing a new series of 'Cambridge English Classics,' reprints of famous books in convenient form. . . . The first of the series is now ready, and readers of Hobbes will rejoice to be saved from the horrors of the cheap edition, which has appealed to so many purses and weakened so many eyes. It is pleasant to be able to read the 'Leviathan' comfortably, and to look upon it in something like the form in which Hobbes saw it."

ELEMENTARY GEOMETRY (PRACTICAL AND THEORETICAL). By C. GODFREY, M.A., Senior Mathematical Master at Winchester College, and A. W. SIDDONS, M.A., Fellow of Jesus College, Cambridge, Assistant Master at Harrow School.

The Educational Times.

London University Teaching.

In our survey last month of the educational provision for London we held over, as requiring an article to itself, the wide subject of University teaching.

It is hardly a paradox to say that without a University London possessed the best University teachers in the world. Neither Paris nor Berlin could produce such a staff of eminent and brilliant professors as Davy and Faraday, Huxley and Tyndall, De Morgan and Martineau; and the list might be indefinitely extended. Yet none of the many and conflicting definitions of a University would include the Imperial Examination Board that has now been happily absorbed as a subordinate branch of the true University of London, which dates from June 29, 1900, when the Statutes drawn up by the Royal Commission of 1898 received the Royal assent.

The short three years which have since elapsed have been spent mainly in laying the foundations of the new institution, and there is as yet but little of the work that appears above ground—so little that the outside critic is beginning to hint not obscurely that the University is a hollow shell; an elaborate piece of machinery which creates Faculties and Boards of Study, which converts seminaries into schools of the University and college teachers into University professors, but adds nothing to the supply of higher teaching and brings no grist to the mill.

We may freely admit that, as Cicero said of the clever boy, the University at present "non res est, sed spes"; but, if, as we are convinced, the organization has proceeded on right lines, the promise for the future is indeed great. Mr. Sidney Webb does not exaggerate when he dips into the future and tells us that a London University offers "the potentiality of growing rich beyond the dreams of avarice."

Let us look first at the population for which it will cater. The Greater London as defined by the Statutes, with a radius of thirty miles, contains seven millions of inhabitants—half as many again as the population of Scotland and nearly twice as many as that of Paris and of Berlin combined. If the proportion of University students to the population were the same as in these two capitals, the University of London would number well over twenty thousand undergraduates. But to rival, or even to approach, these numbers it is evident that the University must provide teaching at a rate within the means of the average householder. In foreign capitals, by help of State subventions, the tuition fees are almost nominal; but, though in England there is little prospect of extending free education above the elementary stage, yet we may fairly hope that under the Education Act of 1902 higher education will be freely subsidized by the County Council; and in some of its branches—as, for instance, the training of teachers and scientific research—a strong case has been made out for increased Treasury grants.

Mr. Webb, who on the business side of the question is an unrivalled authority, estimates the total expenditure required to start and carry on the reformed University at a lump sum of £5,000,000—£1,000,000 for new buildings and an endowment fund to produce an income of £150,000 a year. If half of this sum were subscribed by individual donors, he reckons that a halfpenny rate would supply the remainder. This seems to us no extravagant demand; but we would add the needful corollary that endowment must take precedence of bricks and mortar.

To take a concrete instance, no one will dispute that London needs a Central Technical College, an analogue to Charlottenburg, and we are all grateful to the South African capitalists who have started the project; but we are inclined to doubt whether, with its increasing needs, the London County Council was well advised in promising so large a contribution as £20,000 a year. The Goldsmiths' Company's Polytechnic at New Cross, which it is bound to take over, will alone absorb half the sum.

The dual functions of the reformed University—to provide a technical school for brain-workers of all professions and at the same time to be a world centre for post-graduate research—are so admirably stated by Mr. Sidney Webb that it is enough to refer our readers to his volume; no *résumé* could do justice to his masterly exposition. But we may briefly indicate the points wherein his conception of a University appears to us defective and the possible dangers that he has not foreseen or has not cared at this stage to dwell on. The proposition that the London University must be a technical school for

Digitized by Google

lawyers, doctors, engineers, &c., we can only accept with the proviso that it must train specialists who have been adequately educated by previous study of the liberal arts and sciences. Evening classes, polytechnic courses in science and commerce, are excellent things, and they will be improved and strengthened by being brought into relation with the University; but they do not constitute University teaching in the proper sense of the word. This part of the work, together with the inspection and examination of schools, has grown and prospered under its energetic Registrar; but it should bear its proper label of "Extension." We cannot have too much of University teaching; but we may have too many degrees, as at Athens, where the chances are that your hotel waiter is a graduate of the University.

The danger is one that is fully realized in the United States—the tendency to divert attention and funds from the pursuit of science as an end in itself and as the guiding principle of University policy. We cannot do better than quote the warning uttered some ten years ago by the President of Columbia University in his Introduction to Paulsen's "German Universities": "The danger consists in allowing the claim that closely specialized work, in a purely technical or professional branch, entered upon without any broad preparatory training whatever, is to be regarded as legitimate University work and entitled to the time-honoured University recognition and rewards." Like Mr. Webb, we desire for London a truly democratic University, but one as far removed from the type of modern Athens as it will necessarily be from the cloistered luxury of Oxford and Cambridge.

In the special branch that concerns us most closely—the training of teachers—the University of London has effected something and will do far more. It has already a Board of Pedagogy, a Professor of Education, and a Day Training College; but, as Mr. Webb calculates, London engages each year fifteen hundred new teachers. There is no reason why all these, or at least the majority of them, should not be brought into connexion with the University. We must multiply our professors and our training colleges, and we must establish a Faculty of Pedagogy, which shall lay down courses that will in time become obligatory for all recognized teachers in London schools.

NOTES.

Sir Donald Currie's munificent gift, not only removing the last financial obstacle to the incorporation of University College with the University of London, but also making welcome collateral provisions of far-reaching usefulness, does conspicuous honour to the donor, and modifies the reproach of wealthy London citizens. The sum of £80,000 will erect the buildings required for the School of Advanced Medical Studies, and a further sum of £20,000 will provide a suitable Nurses' Home in connexion with University College Hospital, together with accommodation for medical students attending poor women of the neighbourhood in the course of their practical study of obstetrics—sites for both buildings having been already acquired. To this £100,000 Sir Donald thoughtfully adds £2,500 for the furnishing and provision of a library, &c., for the Nurses' Home. Only those that have some practical knowledge of the extent and the value of the work done in the Medical School and in connexion with the Hospital can appreciate the importance of Sir Donald's timely and open-handed beneficence.

When one reads of the millions of dollars that rich Americans pour into the treasuries of transatlantic Universities, and reflects upon the vast wealth of the City of London, one cannot but be amazed that University College should have had to wait so long for incorporation in the University. For the College has not lain under the necessity of basing its appeal merely on its hopes for the future, although these could not easily be over-stated: it could point to conspicuous—incomparable—services to the cause of education, not only in London, but throughout the country, and to most extensive and valuable contributions to learning and science generally. There are special classes, too, whose gratitude for its open door (in a dark time when other academical doors were firmly shut in their face) might well have hastened to anticipate any appeal for assistance. The very need of the College has resulted from its eagerness to keep abreast with the times, if not to lead the way. Probably it is not generally known that very few of the professors are endowed at all, and that not a single one of them has ever enjoyed a salary that would be dignified by the name in an American University. Of course, the excellent idea of a Sabbatical year is unknown, but that may be because there is no Theological Faculty. The situation has been anything but creditable to London or to the country; and we trust that Sir Donald Currie's most laudable example will prompt other citizens that have thriven in London to inquire into the facts, and to see that the greatest of our teaching and researching institutions, on its incorporation in the University, be placed on a financial footing reasonably adequate to its aspirations and its capacities.

Mr. Goldwin Smith writes from Toronto to the *Times* (March 12) to express his joy "that Oxford has given up compulsory Greek, at least for Passmen.": "no Passman mastered Greek." He speaks incidentally of Oxford as "set free from her mediæval and ecclesiastical shackles," and at "a juncture which calls for academical statesmanship." At the same time the fruitless newspaper warfare of Oxford dons over "Greek and Natural Science at Oxford" continues to rage in our contemporary's columns. Prof. Case certainly does well to urge that the students should "work harder," and to call attention to the following words of Sir William Huggins:

> Taking a wide view of the whole question, it seems to be eminently desirable that the culture to be derived from classical and literary studies should, as far as possible, be retained, which would become practicable by the introduction into our schools of a much keener devotion to work, together with such improved methods of teaching languages and mathematics as would not only increase the educational value of these studies, but also leave ample time for the teaching of science, no longer, as is now the case, as a subordinate subject to be barely tolerated, but as an integral and essential part of all education, it being understood that such teaching of science is to take the form, as far as possible, of the study of the phenomena of Nature by direct observation and experiment.

Undoubtedly, there is time enough for both classics and

Digitized by Google

science if proper methods of teaching were in force under proper organization, and if the men were induced, or required, to work with reasonable application,. We believe with Prof. Case that "boys coming to Oxford and Cambridge would be the better intellectually and morally by working harder and learning both Greek and 'science.'" For the neglect of such inducement or requirement Greek has had to suffer. There is only too much truth in the protest of *Granta*: "You may find students in Edinburgh and the other Universities north of the Tweed. But at Oxford and Cambridge the species is practically non-existent."

Prof. Burnet tells the Classical Association of Scotland that the claims of the classics should be based, not on the importance of their subject-matter, but on their value as a means of training in form. If you found your case on the matter, you will be told that your pupils, "after three or four years' study, are still unable to read Greek or Latin books for pleasure." More than that, we may add, you will be told that the matter is already accessible in English. "Classical education," said Prof. Burnet, "has in the past inspired many with a lasting sense of literary form and a genuine love of good writing." True; but this result is not a monopoly of classical study, nor yet is it in any case the result of classical study alone. The just claim is weakened by extravagant extension. Prof. Burnet counselled classical teachers to "stand up boldly for the formal side of their work"; and this, he added, "means that in the Universities pure scholarship must be ranked higher than what is called research, and that in the schools composition, and especially verse composition, must be restored to its rightful place." Prof. Burnet seems to forget that discretion is the better part of valour. Why will professors, even accomplished classics, persist in spoiling a good case by lack of discrimination?

The Society of Educational Research has exhibited a quite unusual promptitude of discovery. It held its first annual meeting in New York on February 13, when the director of its investigations, Dr. J. M. Rice, the well known editor of the *Forum*, answered the very natural question, "What has the bureau of investigation done?" Thus (according to the *School Journal*, February 27):

> It has been studying the comparative value of methods and has found the true value. Good teaching does not depend upon the method. Our tests have shown that, if you put a good method into a poor teacher's hands, you will have a poor result. If you put a bad method into a good teacher's hands, you will have a good result. Good school work does not depend upon the system of philosophy followed. A good school comes from the development of the power to teach. That is the whole question, and so the power to supervise schools is the great secret. The supervising principal, then, is the most important factor in the school system.

From this statement ("in substance") of Dr. Rice's discovery, we seem to gather that "method" and "philosophy" in teaching are alike exploded, and that "the whole question" is to turn on "the power to teach," under due supervision. "Back of" this whole question, however, there would still appear to be some necessity to find "the power to teach"; and we are not as yet told how it is to be found in the absence of method and philosophy. Are we to be thrown back on the rule of thumb of "born" teachers? Or is the teacher to be "trained" by working as best he may under the critical fire of superintendents? One cannot but suspect the logic of Dr. Rice's demolition of method. The "poor" teacher does not count: and his failure with a good method and the good teacher's success with a bad method alike leave it open to us to hold that a good teacher may be more successful with a good method than with a bad one or none at all. And even a poor teacher will probably do better with a good method than without a method at all.

"O tempora! O mores!" Where is the American journal wherein we can place trust in future? Last month we based some playful remarks about Prof. MacDowell's resignation upon a most reputable American school journal, which now appears to have been misled by the New York *Evening Post*, which President Butler accuses of having printed the story as what the editor calls "very interesting reading" in the face of his personal assurance that it was "wholly false." Prof. MacDowell assures President Butler that "the reported interviews are very incorrect." The press generally may well join Dr. Butler in righteous indignation against the shameless *Post*, and heartily wish with us that they had not touched the wicked thing. We should certainly be surprised, however, to learn that anybody could have taken the story *au pied de la lettre*; and still more to find that any one would seriously regard it as reflecting upon Columbia, or upon Prof. MacDowell either. Probably it would be taken, as we took it, to have been merely the impatient frankness of a man that had very serious views of his work. The real objection would come from the students, and this is not the first time that students have been stigmatized as "barbarians." Columbia still survives!

In the preface to his strikingly able and original work "Buddhist India," Prof. Rhys Davids referred briefly, but pointedly enough, to the extraordinary neglect of Oriental studies in England. At a recent meeting of the British Academy he read a paper on the subject, which is concisely summarized in the *Athenæum* (March 12), but which we hope will not be left in the obscurity of the proceedings of that somewhat mysterious body to whom it was addressed. Without repeating Prof. Rhys Davids's figures of comparison between this country and Germany (which does not possess an India) one can readily agree that "this scandalous state of things" requires a remedy on a comprehensive scale. Dr. Rhys Davids said:

> Meanwhile the main support of Oriental studies was the entrancing interest of the studies themselves. That interest was not philological so much as historical. The philology was an indispensable means to the end, but not the end itself. Oriental study meant the decipherment of half a dozen ancient literatures, each of them full of historical evidence. It was the study of the origins of all the great religions, and the history, through the centuries, of most. It was the study of three at least of the most interesting and original systems of philosophic thought. It was the study of the political movements, the literary achievements, the social and economic conditions among the majority of the human race from the beginnings of history down to to-day. The mine was practically unworked.

A most Philistine exhibition, truly! But, as Prof. Rhys Davids recognized, "the neglect of Oriental studies does not stand alone: it is only one instance of a larger question, of neglected organization, of the consequent overlapping, of inevitable muddle, of continual waste." In fact, the in-

Digitized by Google

tellectual interests of the country have no intelligent or forceful leading or backing in the House of Commons; and but little can be effected without the direct or indirect influence of the voting power.

In the forenoon of the fourth day of the recent annual session of the Mahommedan Educational Conference at Bombay, says the *Educational Review* (Madras), Shums-ul-Ulama Moulvie Hafiz Nazeer Ahmed, LL.D., of Delhi, "kept all those who heard him spellbound for nearly an hour" with his "wise, witty, and humorous sayings and recitations in Urdu." So much so that he was brought on again in the afternoon, "and made a further contribution of his witty, wise, and humorous sayings and verses." Whereupon an admirer promptly offered a donation of Rs.1,000 "in token of his joy at the witty addresses of Moulvie Nazeer Ahmed." Would that we had a few English Moulvies of similar potency to effect an advantageous and prompt transfer of coins of the realm—in thousands—to educational movements!

SUMMARY OF THE MONTH.

At the first meeting of the London County Council Education Committee (March 25), Sir William Collins was elected Chairman and Mr. A. J. Shepheard (last Chairman of the Technical Education Board) Vice-Chairman.

In many diverse quarters it has been urged that the scheme of the London County Council for its future Education Committee should be modified so as to provide for the co-optation of persons of experience in education. Sir William Anson stated in the House that the Board of Education had received memorials to this effect from the following bodies and individuals:—

Central Governing Body of the City Parochial Foundation; Women's Industrial Council; Church School Union, Barnes; Mayfair, Curzon Schools; Rev. J. J. Coxhead; Southwark Roman Catholic Diocesan Association; Westminster, &c., Schools Association (Roman Catholic); Miss Helen Conybeare and eight other educationists; Chelsea Borough; University of London; London Progressive Education Council (asking for the co-optation of a large number of women); forty-five prominent educationists; Incorporated Association of Assistant Masters in Secondary Schools; Incorporated Association of Head Masters; Women's Liberal Metropolitan Union (asking also for the inclusion of a large number of women); Kensington Borough; B. J. Smythe, Esq.; City of Westminster; F. Pritchard, Esq.; City of London; Wandsworth Borough; City and Guilds of London Institute.

Dr. Macnamara, M.P., recants the like opinion, which he "ignorantly" held before experience on the Board. He is with the Progressives "heart and soul" in "ruling co-optation down to the narrowest margin"; and to supply driving power he wants increased membership by the election of a third county councillor for each of the fifty-eight areas, "and to these might be added a narrow margin of membership by co-optation."

Sir Norman Lockyer, President of the British Association, has forwarded to the Board of Education a very influentially signed memorial urging amendment of the London County Council scheme "so that the Education Committee may include persons who would be universally recognized as authorities on the needs of the University, the technical institutes, and the elementary and secondary schools." The memorial says:

The Education Committee will have to undertake not only the work of elementary instruction hitherto carried out by the School Board, but it will also have the more difficult task of supplying and aiding the supply of secondary, technical, and higher education, and of promoting the co-ordination of all forms of education in London. The present backward educational position of this country is especially marked in those branches designated "secondary" and "higher." To develop the resources of London in these respects, to raise the standard of secondary education, to provide for the training of teachers for both primary and secondary schools, to organize and support the facilities for University training, and finally to organize a great technical high school in the University and the more strictly technical instruction of the polytechnics, so that the whole may be one educational edifice crowned by the University of London, will be a task of great magnitude, and will require the assistance of persons specially skilled in and acquainted with the needs and conditions of these various grades of education.

The educational deadlock in Wales still continues: Wales will not administer the Act. Under Section 7, Subsection 3, of the Act of 1902, the managers of certain Church schools in Carmarthenshire applied to the Board of Education to determine their differences with the Local Education Authority. Under Sections 16 and 23 (10), the Board exercised their power to "hold a public inquiry." The Carmarthenshire Local Education Authority are alleged to have failed in their statutory duties towards some sixty schools within their area in four points:

(1) Have failed to be responsible for or to control the secular instruction to be given in such schools.—Section 5. (2) Have failed to appoint a manager or managers for such schools respectively.—Section 6 (2). (3) Have failed to maintain and keep efficient such schools or to control the expenditure required for that purpose.—Section 7 (1). (4) Have withheld their consent to the appointment of teachers on other than educational grounds.—Section 7 (1) (*c*).

Mr. A. T. Lawrence, K.C., held the inquiry at Carmarthen on March 24–25. Will the Board *mandamus* the recalcitrant Authority?

The Councils of Cardiff, Swansea, Newport, and Merthyr tried to obtain a *mandamus* (March 4) to compel the Board of Education to adopt their schemes, which did not provide for the co-optation of outsiders other than women. By Section 17 (6), "Before approving a scheme the Board of Education shall take such measures as may appear expedient for the purpose of giving publicity to the provisions of the proposed scheme, and, before approving any scheme which provides for the appointment of more than one Education Committee, shall satisfy themselves that due regard is paid to the importance of the general co-ordination of all forms of education." True, but not before "*dis*approving," which was what the Board did last June. So the Divisional Court refused a *mandamus*, unanimously, and decisively. The Cardiff Committee, who took the lead, have decided not to enter a hopeless appeal. Will they frame a fresh scheme, or leave the Board to apply force? There is said to be a strong feeling in favour of masterly inactivity.

To a deputation from the Association of Technical Institutions, who advocated further representation of persons more directly associated with the work of technical institutions on the Consultative Committee and the Teachers' Registration Council (March 17), Lord Londonderry expressed his sympathy, and promised favourable consideration of the arguments put before him.

In reply to a deputation representative of the Welsh University Colleges, who asked for increased Treasury contributions, the Chancellor of the Exchequer pointed out (March 3) that the increased grant for English colleges was really something in the nature of an equivalent grant for England. Ever since 1885 three Welsh colleges had had £4,000 a year each, while in 1889 on the English list there were eleven colleges with an average grant of £1,336; and in 1903–4 there were fourteen colleges, their average grant being still under £2,000. Further, the conditions laid down for England were far more arduous and exacting than those which had prevailed in Wales; and, while the University of Wales had received a grant of £4,000 a year for many years, no English University, except London, had hitherto been given a higher grant than £2,000. The new grant, if Parliament approved it, would amount for England, excluding Monmouth, to £54,000, for a population of 30,500,000—that is to say, £1. 15s. 4d. per 1,000 of the population; but the existing grants for Wales, including Monmouth—£12,000, for a population of 2,013,000—amounted to £5. 19s. 2d. per 1,000 of the population. The aid which the State gave, he continued, should be in a certain proportion to the aid which was voluntarily provided in the localities, and should be a stimulus to fresh voluntary contributions rather than anything in the nature of a substitute for them. They in Wales ought to get more help from the great industries of the country, and must make further efforts to secure local support if they would justify their claim for any increase. Finally, though he did not desire an immediate answer, Mr. Chamberlain asked whether they would be prepared, whenever they came to ask again for increased grants, to accept the

Digitized by Google

same kind of inspection and control which was applied to the English colleges.

Dr. T. Gregory Foster, Secretary of University College, London, and a member of the Mosely Education Commission, delivered an interesting lecture at the College, upon "The Universities and Colleges of the United States of America." The general scheme of education in the States, he said, is that the elementary, grammar, high school and college courses shall occupy four years each, the college course commencing at eighteen, He strongly deprecated the English system of examination conducted by an examiner that knew nothing of the examinee. In America such a state of things did not exist: the person who taught was supposed to be sufficiently qualified to examine. By the English system of examination the teacher lost his individuality, and was tempted to push and develop the most promising of his scholars, who would do the most credit to him, instead of working for the children as a whole. The English system of matriculation, too, had been dealt a severe blow in the States by the American plan of "accrediting." In this way, any high-school scholar who could satisfy the college authorities that he or she had passed the high-school course satisfactorily was immediately received into the college or University. This had the effect of linking up in a most striking fashion the Universities and the schools.

Regarding the King's Scholarships, Sir William Anson made the following statement in the House:—

The following table gives the number of candidates for the King's Scholarship Examination who passed in the First or Second Class at the last two examinations:

	Christmas, 1902.			Christmas, 1903.		
	First Class.	Second Class.	Total.	First Class.	Second Class.	Total.
Men.....	521	933	1,451	550	1,016	1,566
Women ...	1,577	2,959	4,536	1,904	3,432	5,336
Total ...	2,098	3,892	5,987	2,454	4,448	6,902

It must be remembered that the numbers for 1903 include a considerable number of persons who passed in the First or Second Class in 1902, but who entered again in order to secure a higher place. There are also a certain number who are unable to pass the medical examination which is required before admission to a college. In October, 1903, 3,439 students were admitted to training colleges; 1,186 men were admitted, of whom 1,001 had passed the King's Scholarship and 156 some equivalent examination; 2,253 women were admitted, of whom 1,872 had passed the King's Scholarship and 293 some equivalent examination. The remainder in either case were admitted under Articles 115 (*b*) and (*c*). The Board have as yet no accurate information as to the number of places which will be available in October next, but they anticipate that there will be not less than 1,250 places for men and 2,550 for women, or not less than 3,800 in all.

A most varied and interesting exhibition of selected works submitted in competition for London County Council art scholarships and exhibitions (which amount to £1,300 in annual value) was held at the Northampton Institute, Clerkenwell, March 17–19. The examiners this year are Mr. Lewis Day, Mr. George Frampton, R.A., and Mr. George Jack. The award of scholarships will probably be made by the Council in the course of the present month.

At the eighth annual meeting of the Midland Education League, at Birmingham (March 16), the following resolution was carried unanimously:—

That, in order to establish a universal and homogeneous system of national education, the Education Acts should be amended without delay, and the Legislature should provide (1) that the board of managers for each elementary school should contain a majority of members appointed by the Local Education Authority; (2) that, as regards elementary education, the public control of all schools maintained by public money should be uniform and complete, that teachers should be free from the application of sectarian tests at every stage of their training and professional career, and religious instruction (beyond such as is covered by the Cowper-Temple clause) should lie wholly outside the purview of the Local Education Authority; (3) that, as regards secondary education, no institution of a specifically sectarian character should receive aid from the Local Education Authority.

A Conference on Secondary Education, promoted by the University and the City Education Committee, was held at Birmingham on March 19. The training of secondary teachers was a prominent subject—to what extent it should be carried out in training colleges and in schools, and how far it should depend on Government aid. The relative weight to be given to the humanities and to science was also discussed. There was a general feeling that specialization should be deferred till fourteen or fifteen, and be preceded by a sound English education.

The Certificate Examinations of the National Froebel Union in 1903 drew 970 candidates. For the Elementary Certificate, 487 entered; 238 gained Certificates, 4 with Distinction. For Part I. of the Higher Certificate 219 entered and 165 passed; for Part II. 264 entered and 160 were successful, 8 being in the First Class. Reports, papers, and results can be had from the Office, 4 Bloomsbury Square (9d.).

UNIVERSITIES.

(*From our own Correspondent.*)

Oxford.

The term died a natural and quiet death, just when fine weather had set in to make Oxford more endurable. We are now comparatively deserted, except by examiners and examinees, the latter including a large detachment of schoolboys up for Smalls, or else competing in the last large scholarship "group," Magdalen, New College, and Corpus. How these colleges, who generally count on a strong field, will fare now that they come after almost all the other colleges (here and at Cambridge) have had their pick remains to be seen; but, on the face of it, one would think that it was better for both college and schoolmasters that scholars should not be elected nearly a year before they come into residence; certainly schoolmasters know that it is not always very easy to keep up to the mark a youth who, besides all the glamour of sixth form and prefectdom, realizes that he has "arrived."

The debate about examiners in the Theological School ended, as expected, in a victory for the laymen, even though Mr. Benecke, of Magdalen, one of the most distinguished of the non-clerical theologians, was on the side of the angels. The debate was refreshingly free from the acidity which often flavours theological discussions.

We hear that the new Greek-exemption statute has been drafted, but your correspondent has been unable, even by judicious flattery of a member of the Hebdomadal, to discover its terms. Doubtless they will appear in unadorned prose in the first *Gazette* of next term.

Honour Classical Moderations still, despite their critics—and there has been a recrudescence of criticism of late—continue to draw, and there were about two hundred and forty candidates, "besides women and children." Criticism now is directed at the fact that the better class of men could do more than is required, but that the "general books" are too much for the weaker men. If this be so, it might be conceivably possible to arrange that an additional subject should be required from those who aspire to a place in the first two Classes. But we do not believe that they would help matters very much, as most of the candidates believe in their capacity (coupled with luck) to get a Second Class.

The report of the Delegacy for the Training of (secondary) Teachers has been circulated. The scheme has been working for ten years now, and, whatever diverse opinions may be held about the value of pedagogics, there is no doubt that an increasing number of men (and women) are taking the course. This may be due to a certain extent to outside pressure, and be not entirely disconnected from the Registration Act, but the fact remains that last year there were 121 students.

In the Examination for Diplomas nearly half the candidates were rejected—an eloquent proof that the Delegates do not make the examination too easy: a noticeable point, from which the curious may draw what inference they please, is that five of the six who obtained Honours in the examination were women. For ourselves, we believe that women are much more painstaking in the acquisition of information, but less inspiring when they come to impart it; yet that view may be ascribed to masculine prejudice.

Other recent events since your last issue have been the dinner of the Russell and Eighty Clubs, with Mr. Sydney Buxton and Mr. Rufus Isaacs as the chief speakers, and that of the St. Patrick's Club, who were privileged to hear a remarkable speech from Sir Horace Plunkett.

Then Balliol and Christ Church have elected new Proctors to

Digitized by Google

succeed Messrs. Haselfoot and Wylie, and have chosen two Wykehamists in Mr. Palmer and Mr. Myres. The former of these was the pioneer of a movement some years ago to abolish Eights Week and combine it with Commemoration Week, maintaining that the Summer Term at Oxford was for many men a mere opportunity of amusement; the latter is now known chiefly as an archæologist and successful digger, but he had a remarkable run of successes as an undergraduate, being, in addition to a classical scholar, a man of science, and passing from a New College scholarship to a Magdalen Fellowship, and thence rapidly to a Christ Church Studentship.

In matters athletic we are rather gloomy. Experts tell us that we must lose the Boat Race, and it certainly is a remarkable thing that the University Eight this year includes no member of either New College or Magdalen, the two head boats on the river.

In the Sports Cambridge will have a complete "day out," with quite a chance of accomplishing a record by "sweeping the board." It looks as if we might even lose the Golf Match. Altogether the epithet "gloomy" is not unjustified, and we can find what comfort we may in the fact that, after all, we did win the Hockey Match, and that, if Cambridge are better boxers, we are better fencers.

The ingenious here, again, might find a text in the last fact for a comparison of the Oxford and the Cambridge "manner."

The Union, after some closely contested elections, has taken to itself new officers. The new President is Mr. Moore, of St. John's, while Magdalen (for the first time, one would almost imagine) provides the new Secretary in Mr. Lygon.

(*From our own Correspondent.*)

Cambridge.

THE King's visit to Cambridge was the one bright spot in what otherwise would have been the dullest term on record. For weeks we had quite a large gang of courtiers in making, who provided almost as much amusement to the plain outsiders as the courtiers in being of the great day itself. Your readers by this time will doubtless consider the royal visit as a bit of ancient history; but in Cambridge we so seldom catch sight of our ruling families that we cannot pretend to the *blasé* indifference of the Piccadilly policemen who were imported to keep us in order. The King and Queen were received at the station by Mr. Austen Leigh, acting as Deputy Vice-Chancellor. An escort of the mounted infantry section of the University Volunteers rode with the Royal carriages, which, unfortunately for the spectators, were closed. The Senate House was first visited, the Queen and the Princess Victoria taking their places in the procession of Heads of Houses and Doctors which defiled through Senate House Yard to the Senate House itself. Then Dr. Chase, the Vice-Chancellor, having conducted the Royal party to their seats, read an address of welcome, to which the King read his reply. It was noticed that every word was audible throughout the entire building, though our professional Public Orator thinks it necessary to shout and scream to obtain the same effect. A disquisition from the Vice-Chancellor on the history of the new buildings, and an adjournment was at once made to the Fitzwilliam Museum for lunch. First-class guests fed with the King and Queen; second-class at King's; third-class at home; while fourth and no class had their bun and ginger-beer or ale and cheese at the nearest inn.

The afternoon ceremony was got up on the model of Buffalo Bill's show. The arena was guarded by the University Volunteers; and the King's loyal subjects, if provided with tickets, filled the stands opposite and at the side of the new buildings. Nothing particular happened. The King and Queen looked in at the various museums, unveiled the statue of Prof. Sedgwick, said a few graceful things to the representatives of the great professor, and shortly after four o'clock left for the station with the same escort as before. Dr. Chase throughout gave a real good example of dignified yet easy grace, and all the undergraduates thought the King a model for imitation in all he said and all he did. No knighthoods were knocking about, and they say some people are sorry therefor.

Our upper circles have been so disturbed by all this pageantry that academic questions have, for the time, sunk to rest: the Greek controversy slumbers; the historians, the moralists, and the economists lie down together in prehistoric peace.

One little excitement we had when the Senate, by a large majority, gave an emphatic negative to the proposal of the Financial Board to sell part of the Botanic Garden to the Educational Committee of the County Council. The honours of the controversy certainly rested with Mr. Bateson, of St. John's, whose apt retorts not only crushed the opposition, but won votes for his own side. The policy of robbing Peter to pay Paul has now received an effectual buffet.

The University, after much pomp and parade in the matter of worrying the Government to let us have our own way in the training of our own candidates for the Army, have solemnly appointed a Board of Military Studies. It is absolutely certain that not one sixpence will be expended by the University or the Colleges in furthering the cause of military education: the expenses and risk will fall upon private individuals, but the glory will go elsewhere.

The falling-off in the number of medical students is considerable; but it may be conjectured that the fall is among the weaker brethren: fees may fail, but efficiency will be maintained.

Our boat, before these lines get into print, will have settled the momentous question as to which University has the worse crew this year. That distinction, indeed, will probably rest with Oxford. It would be interesting to see the Oxford boat with a three-lengths start matched against the college crew which Third Trinity sent to Henley last year.

Politics are slumbering. Sir John Gorst, in spite of strong hints, wishes to keep his seat; and the Cambridge caucus, unless they run a man like Mr. Alfred Lyttelton, who would command the votes of the Church party and the Ministerialists alike, may land us in a disaster if they allow an irresponsible politician like Sir J. Gorst to represent a University in which neither party specially desires him as a representative.

London.

THE Senate resolved (February 24): "That the Board of Education be informed that the Senate, while in no way wishing to cause any postponement of the appointed day, think it desirable, in the interests of education in London, that the University should be closely associated with the Education Committee to be appointed by the London County Council, and that persons experienced in education should be members of that Committee." [Elsewhere we refer to Sir Donald Currie's splendid gift (£102,500) to the University and to University College.]

Manchester.

THE number of students this session to present date is given thus:—Arts, Science, and Law Faculties (including 234 women students), 866; Medical Faculty (including 10 women), 344. The number of students at the corresponding date last year was:—Arts, Science, and Law Faculties (including 200 women students), 820; Medical Faculty (including 9 women students), 330. The cost of the new bacteriological laboratories is almost met; but from £5,000 to £10,000 is wanted for additional accommodation for botanical teaching. There were 51 students in Botany in 1902; now there are 275. The formal opening of the Schunck Laboratory will take place in July.

Birmingham.

ON the rumour of the impending resignation of Dr. Reginald Buller, B.Sc. (Lond.), Ph.D. (Leip.), D.Sc. (Birm.), assistant to the Professor of Botany, Prof. Hillhouse is reported to have remarked to a pressman "that most members of the professorial staff are deeply concerned as to the nature of the prospects open to the junior staff of the University. The higher positions open to them are very few in number, and thus it may come about that a man of brilliant attainments may for years be in receipt of a salary little or no better than that of a fairly good clerk, or, perhaps, indeed may never attain to a higher post at all." No doubt; but the trouble is not confined to Birmingham.

Leeds and Sheffield.

THE following letters have been addressed (March 3) by the Clerk of the Privy Council to the agents of the Yorkshire College and of Sheffield University College. To the Yorkshire College:

The Committee of Council have carefully considered the statements made at the Conference on the 2nd inst., and direct me to say that, under all the circumstances represented to them, they see no reason to modify their opinion that the proper title to be assumed by a University with its seat in Leeds is "The University of Leeds." In coming to this decision, however, their Lordships are not insensible to the valuable work done by the Yorkshire College for the county at large and to the significance of the arrangements by which representatives of the county and of the county boroughs are to be given a share in the government of the new

Digitized by Google

University. But they feel obliged to recommend to His Majesty the restriction of the title as aforesaid, both on the score of precedent and convenience.

To Sheffield University College:

Their Lordships have considered the case presented on behalf of the petition of the University College of Sheffield praying for the grant of a charter incorporating a University in Sheffield and the resolutions in its support adopted by various bodies. The Committee understand that the promoters are engaged in raising a sum of £170,000 for the purposes of the University, by the appropriation of part of which new buildings of a suitable character will be in readiness by the spring of 1905, and that, in addition to a considerable yearly sum which the City Council have promised to provide, material assistance may be looked for from the County Council of the West Riding of Yorkshire and probably from Derbyshire and the large urban communities in the neighbourhood of Sheffield. In these circumstances their Lordships are willing to entertain favourably the application before them, and, subject to a substantial realization of the hopes mentioned, will be prepared in due course to recommend to His Majesty the grant of a charter in general conformity with the draft accompanying the petition, but it will be necessary for the promoters to submit a draft of the statutes, which must be associated with the charter. In their preparation care should be taken to include all such matter as may properly be required to give effect to the said instrument, the terms of which will have to be altered in certain respects.

About £12,000 a year has been promised for Leeds University purposes, but the power to utilize this sum effectively will largely depend on the raising of sufficient capital to carry out the building extensions, which will cost £70,000 (partially, but to a considerable extent conditionally, promised). £100,000 really is wanted; donations come to £40,000. A strong committee has been appointed to raise the full sum required.

Glasgow. Commemoration Day will be celebrated on April 19. Prof. Sir William Ramsay, University College, London, who commenced his teaching career as member of the staff at Gilmorehill, will deliver an oration on Joseph Black, Lecturer on Chemistry 1756–66 in the old College, and enunciator of the doctrine of latent heat.

CURRENT EVENTS.

Fixtures. Prof. J. Adams will deliver a lecture on "How to be Interesting in Teaching" at the College of Preceptors on Wednesday, April 20, at 7.30 p.m.

* * *

Mons. Léon Duchemin will lecture on "Flaubert" to the Société Nationale des Professeurs de Français en Angleterre at the College of Preceptors on April 30, at 4 p.m.

* * *

Prof. Adams will lecture on "Teaching as a Fine Art" at Royal Holloway College on April 19 at 8 p.m. Cards of admission from the Secretary up to April 17.

* * *

The University of London will hold a School-leaving Certificate Examination beginning on July 4 (in addition to that held in connexion with the ordinary Matriculation Examination beginning on June 13). Any school presenting pupils must submit a general statement of the complete course of instruction it gives, and also the curriculum of study pursued by the candidates. Further information and forms of entry from the Principal. Entries must be made for the June examination before May 1, and for the July examination before June 1.

* * *

The University of London has arranged the following central courses (Extension) for the summer term:—(1) Five lectures on "General History (Part I., Antiquity, 5,000 B.C. to the Fall of the Roman Empire)," by Dr. Emil Reich, at the University, on Tuesdays, at 8 p.m., beginning April 19, and repeated on Wednesdays, at 3.30 p.m., beginning April 20 (the last on *Tuesday*, May 17, 3.30 p.m.). (2) Five lectures on "The Making of Modern Europe," by Dr. J. Holland Rose, at Gresham College, on Tuesdays, at 8 p.m., beginning April 19. (3) Five lectures on "The Fundamental Principles of Evidence and Reasoning," by Dr. Emil Reich, at Gresham College, on Thursdays, at 8 p.m., beginning April 21.

* * *

In Easter term special courses will be given at Bedford College, London, by Alexander Paine, M.D., D.P.H., on Bacteriology (with practical work); Percy J. Harding, M.A., on "The History of Geometry"; and J. W. Allen, M.A., on "The History of Political Ideas."

* * *

The Cambridge University Extension Summer Meeting will migrate this year to Exeter, July 29 to August 23. The appropriate main subject will be "The Age of Elizabeth," with local illustrations of (1) the History of the British Navy; (2) Botany, Geology, and Meteorology; and (3) Antiquarian and Literary Associations of the South-West. There will also be Theological courses, special courses for foreign students, and a Social and Educational Section, with practical classes, primary and secondary. The inaugural address will be delivered by a Western Bishop (Bristol), and among other lecturers will be Lord Brassey and Admiral May (if in England at the time), Lord St. Cyres, the Bishop of Exeter, Sir William White, K.C.B., Prof. Laughton, Mr. Sidney Lee, Prof. A. J. Grant, Dr. J. C. Bridge, Prof. Kirkpatrick, Prof. Ramsay, Prof. Gollancz, Mr. J. A. R. Marriott, Mr. P. H. Wicksteed, and Principal Clayden. Conferences will be held, and there will be every facility for visiting places of historical and scientific interest. Particulars from Rev. D. H. S. Cranage, Syndicate Buildings, Cambridge.

* * *

A vacation course in Geography, similar to that of August, 1902, will be held at the School of Geography, Oxford, during the first sixteen days of August next, provided that a sufficient number of students send in their names to the Curator, School of Geography, Oxford, by June 1. The fee, £3. 3s., includes use of apparatus for practical classes. A provisional programme will be sent in May to all who forward a stamped addressed envelope to the Curator.

* * *

The Teachers' Guild has arranged summer holiday courses at Tours, Honfleur, Santander, and Neuwied. The courses will commence early in August, and will extend over three weeks; at Honfleur about four weeks. Application should be made: for course at Tours, to Mr. A. Wilson Green, M.A., Blackheath School, S.E.; for Honfleur, to Mr. E. W. Hensman, M.A., the Rawlins School, Quorn, Loughborough; for Santander, *probably* to the Rev. H. J. Clayton, M.A., 21 Alexandra Road, Great Crosby, Liverpool; and for Neuweid, to Mr. J. W. Longsdon, M.A., 6 Claremont Gardens, Surbiton.

* * *

A list of twenty-three summer holiday courses on the Continent may be obtained free on application to the Board of Education Library, Whitehall.

* * *

The University of Dijon offers a Vacation Course for foreign students, July 1 to October 31, at 50 fr. *Certificat d'assiduité.* Address—July and October, M. C. Cestre, rue Le Nôtre 7; August, M. Lambert, rue Berbisey 10; September, M. Bernard, rue Saint Philibert 44.

* * *

The International Congress on the Teaching of Drawing will be held at Berne on August 3–6. Application forms and particulars from Miss Ethel M. Spiller, 11 Highbury Crescent, N.

* * *

The triennial Greek Play at Bradfield College—this year the "Alcestis" of Euripides—will be performed on June 21, 23, 25, 27, and 28, by the boys of the College exclusively. All the conditions of Greek art will be observed.

Digitized by Google

The International Printing, Stationery, and Allied Trades' Exhibition will be held at the Agricultural Hall, Islington, from April 30 to May 14. The products of the various trades will be exhibited, as well as the machinery and appliances used.

* * *

An exhibition of (over 100) historical portraits of persons that died not later than 1625, in the possession of the University, the Colleges, and the City of Oxford—together with maps, plans, and views illustrating the topography and architecture of the city—will be held in the East Writing School during the Easter vacation and the first five weeks of the summer term. Opening day (it is hoped), April 13.

* * *

The provisional lists of teachers registered in Column A and Column B of the Teachers' Register will be open for public inspection and copying, free of cost, during one calendar month commencing on Monday, March 21, 1904, at the Offices of the Council, 49 and 50 Parliament Street, Westminster, S.W. (See advertisement, page 167).

Honours.

Aberdeen University proposes to confer the honorary degree of D.D. on six clergymen, two of whom are sons of former Professors of Divinity in the University;

and the honorary degree of LL.D. on the Rev. Thomas Davidson Christie, Principal of the College of Tarsus, Asia Minor; Charles James Cullingworth, M.D., St. Thomas's Hospital; Wyndham R. Dunstan, Director of the Imperial Institute; George Robert Elsmie, C.S.I.; the Right Hon. C. T. Ritchie, M.P., Lord Rector of the University; William Watson, the poet; and Sir George Watt, M.B., C.I.E., of the Industrial Museum, Calcutta.

* * *

Glasgow University has resolved to confer the honorary degree of D.D. on several clergymen, including the Rev. A. J. Maclean, Principal of the Episcopal Theological College, Edinburgh, and the Rev. Prof. H. Williams, M.A., Theological College, Bala;

and the honorary degree of LL.D. on Mr. J. H. Choate, United States Ambassador; Mr. G. F. Deacon, civil engineer, of London; Sir L. J. Grant, Professor of Public Law in the University of Edinburgh; Mr. J. Honeyman, architect, Glasgow; Mr. J. H. Muirhead, Professor of Mental and Moral Philosophy in the University of Birmingham; Dr. W. Stirling, Brackenbury Professor of Physiology and Histology at Owens College, University of Manchester; and Sir William Taylor, M.D., Director-General of the Army Medical Service.

* * *

At University College, London, the following graduates have been elected Fellows of the College:—(1) in Arts and Law: Margaret A. Gilliland, M.A., and Marie A. Lewenz, M.A. (2) In Science: Florence Buchanan, D.Sc.; A. K. Coomara-Swamy, B.Sc.; and Samuel Smiles, D.Sc. (3) In Medicine: Charles Bolton, M.D., B.S., B.Sc; Joseph Shaw Bolton, M.D., B.S., B.Sc.; and F. W. Mott, M.D.

The following were elected Life Governors:—(1) "Persons having special claims in consequence of benefits conferred upon or services rendered to the College": Prof. Osbert Chadwick, M.Inst.C.E., M.Inst.M.E.; Prof. Sir John Macdonell, M.A., LL.D., C.B.; Mr. Charles Hawkesley; Mr. T. W. P. Lawrence, M.B., F.R.C.S.; and Miss Rosa Morison. (2) "Persons distinguished in public life or for their services in the cause of education": Sir Francis Mowatt, Mr. R. K. Gray, Mr. J. R. Macdonald, Mr. Felix Schuster, and Mr. P. Bence Trower.

* * *

The Warden of All Souls (Sir William Anson) succeeds the late Mr. Lecky as a Trustee of the National Portrait Gallery.

Principal Lloyd Morgan, University College, Bristol, has been offered the honorary degree of LL.D. by the University of Wisconsin. He has been unable to accept the honour because he cannot attend in person on June 9—a condition of conferment.

* * *

Oxford University has conferred the honorary degree of M.A. on Mr. T. W. Taphouse, of Oxford, in recognition of his researches into Early English music.

* * *

Cambridge University has resolved to confer the honorary degree of D.Sc. on Wilhelm Ostwald, Professor of Chemistry in the University of Leipzig.

* * *

The Rev. Bertram Pollock, D.D., Head Master of Wellington, has been appointed a Chaplain in Ordinary to the King, in room of the late Canon Ainger.

Endowments and Benefactions.

The King has been pleased to promise a contribution of 100 guineas to the proposed Institute of Medical Sciences in case the project should be carried out.

* * *

The Girdlers' Company have granted £100 a year for three years towards the teaching of economics in the University of Cambridge.

* * *

Gonville and Caius College, Cambridge, has received from an anonymous member of the society a gift of £2,000, with the suggestion that the money should go to the post-graduate studentships fund, for the benefit (in the first instance) of students of languages or of archæology.

* * *

The Goldsmiths' Company are handing over to the University of London their New Cross Institute—site (some seven acres), buildings, and equipment.

* * *

Aberdeen University has received £4,000 for establishing a Law Lectureship, from the estate of the late Mr. John Clark, Advocate in Aberdeen.

* * *

Among recent donations to Owens College are: £300 from Mr. F. Rothwell to the Library; £50 from Sir William Agnew towards the Chair of Architecture; £100 annually from Mr. Edward Behrens and £50 from Sir William Mather to the Chair of Education; £400 a year for five years from an anonymous donor for the Faculty of Theology; £2,800 for the Faculty of Commerce; and £285 as a memorial to Prof. Adamson for the establishment of a lectureship.

* * *

Liverpool University has recently received £1,000 to found a scholarship in Economics in memory of the late Mr. H. W. Meade-King, from his family; and fellowships in Dermatological and Surgical Pathology, £100 each for three years (in the first instance), from Dr. Stopford Taylor and Mr. Thelwall Thomas.

* * *

Birmingham University has received from Mr. Joshua Williams the remainder of the lease (72 years) of a house, with $3\frac{1}{2}$ acres of land, close to the new University site.

* * *

The Trustees of the Gilchrist Educational Trust have made a generous donation to Bedford College Library, for the purchase of classical works of reference, and for an extension of the Library attached to the Training Department for Secondary Teachers.

* * *

The Drapers' Company, in addition to their previous gift of £10,000, have promised £5,000 to the building fund of University College, Cardiff.

Digitized by Google

Mr. Robert Davies, Bodlondeb, has given £1,000 to the new buildings fund of University College, Bangor.

* * *

Mr. David Davies, Plasdinam, who gave £25,000 to Aberystwyth University College, has now offered £12,000 for the erection of a theological college at Aberystwyth—uniting Bala and Trevecca—for the whole of the Calvinist Methodist connexion in Wales.

* * *

Under the will of the late Mr. James A. Woolson, Boston University will ultimately receive £120,000; Radcliffe College, £60,000; and the Wesleyan Academy, Wilbraham, Mass., £60,000.

Scholarships and Prizes.

Jesus College, Cambridge, offers two choral exhibitions, £30 each for three years. Examination, June 21–22. Particulars from Mr. Arthur Gray, Senior Tutor.

* * *

Queens' College, Cambridge, offers six scholarships, £25 each for three years, open to natives of Wilts, Somerset, and Gloucester (including Bristol); and four open scholarships. Examination in May. Particulars from the Registrar.

* * *

Pembroke College, Oxford, offers five open classical scholarships, £80 each, without limit of age, and (perhaps) an exhibition, £45. Examination begins May 10, at 9.30 a.m. One of the scholarships is restricted to persons needing aid to come to the University, whereof evidence is required.

* * *

Royal Holloway College offers eleven entrance scholarships (two of £75 a year, two of £60, four of £50, two of £40, and one of £35) tenable three years; examination, June 27 to July 2. Particulars and forms of entry to be obtained from the Secretary of the College. Forms to be returned (with fee of £1) by June 1.

* * *

At Bedford College, London, the Reid Fellowship will be awarded in May; and a Reid Entrance Scholarship in Arts, £31. 10s. for three years, and a Pfeiffer Entrance Scholarship in Science, £48 for three years, in June. Particulars from the Principal.

Appointments and Vacancies.

The Master of Trinity College, Cambridge, will receive applications for the Clark Lectureship in English Literature (£200; 12 lectures) up to April 21.

* * *

Dr. Anthony Traill, LL.D., M.D., &c., Senior Fellow, Trinity College, Dublin, has been appointed Provost of Trinity, in succession to the late Dr. Salmon.

* * *

The Rev. E. W. Watson, M.A. of St. John's College, Oxford, has been appointed Professor of Ecclesiastical History in King's College, London, in succession to Dr. Collins.

* * *

At University College, London, Dr. G. Dawes Hicks has been appointed Professor of Moral Philosophy; Dr. E. R. Edwards, Lecturer in Phonetics for three years; Dr. H. Batty Shaw, Lecturer in Therapeutics; Mr. Percy Flemming, B.S., M.D., Professor of Ophthalmic Medicine and Surgery, and Surgeon to the Ophthalmic Department of the Hospital.

* * *

The Rev. A. S. Peake, M.A., Lecturer in the Lancashire Independent College, has been appointed Professor of Biblical Exegesis in the University of Manchester.

Mr. Stanley Horsfall Turner, M.A., Assistant Professor of Political Economy in the University of Glasgow, has been appointed Lecturer on Political Economy in the University of Aberdeen.

* * *

Miss Lilian Tomn (Girton), Lecturer at University College School, has been appointed to the Teachership in Modern Economic History, vacated by Mr. Hewins, at the London School of Economics and Political Science.

* * *

Mr. Henry V. Weisse, M.A., Head Master of the Lower School, Rugby, has been appointed Head Master of the Boys' Schools of the Liverpool Institute, in succession to Mr. Fletcher.

* * *

Mr. H. A. Garratt, Head of the Engineering Department at the Northern Polytechnic, has been appointed Principal of the L.C.C. Poplar Technical Institute.

* * *

Mr. G. H. Burkhardt, M.Sc. (Durh.), Director of Higher Education at Rotherham, has been appointed Principal of the Swindon and North Wilts Technical School.

* * *

Mr. Sidney Skinner, M.A., of the Cavendish Laboratory, and Director of Natural Science Studies at Clare College, Cambridge, has been appointed Principal of the South-Western Polytechnic, Chelsea.

* * *

Mr. Frank H. Newman, of the Technical College, Norwich, has been appointed Educational Adviser to the Durham County Education Committee, and Mr. Arthur James Dawson, of Neville's Cross, Durham, has been appointed Secretary for Elementary Education.

* * *

Mr. E. S. Davies, M.A. of Jesus College, Oxford, has been appointed Inspector for purposes connected with the special work of the Higher Education Sub-Committee of the Kent Local Education Authority.

* * *

Dr. Adam Wilson retires from the classical mastership of the Dundee High School, under the age limit of sixty-five, after thirty-one years' service

* * *

Mr. William Henwood, M.A., Head Master of Theobald's Grammar School, Needham Market, has been appointed Head Master of Bromyard Grammar School.

* * *

Mr. James G. Greenhalgh, M.A., B.Sc., mathematical master, Hulme Grammar School, Oldham, has been appointed Head Master of the Higher Grade and Secondary School, Halifax.

* * *

Mr. C. W. Milligan, B.A., has been appointed assistant in the Day Training College for Men, Birmingham, in place of Mr. G. D. Timmins, resigned.

* * *

Mr. William W. Vaughan, M.A., assistant master, Clifton College, has been appointed Head Master of Giggleswick School.

* * *

Mr. Thomas Young, M.A. (Oxon.), B.A. (Lond.), assistant master, Trent College, Derbyshire, has been appointed Head Master of Green and Sea Point High School, Cape Colony.

* * *

Mr. Ernest J. Bonnor, M.A., assistant master, Bradford Grammar School, has been appointed Head Master of Rivington Grammar School, Lancashire.

Literary Items.

The *National Review* (March) has a very interesting budget of "Early Recollections of Mr. Lecky," by "A College Friend."

Digitized by Google

We all like to look on "The Better Side of Things," and Messrs. Mowbray are going to encourage the sentiment by an inevitable "series" so-called, readable and cheap. They will exhibit "The Better Side of Marriage." "The Better Side of Life," and even "The Better Side of Death." They say nothing of a Low Exchequer, of Mothers-in-law, or of the East Wind—as yet.

* * *

Messrs. Longmans have in the press yet another volume by the late Bishop Stubbs—thirty-four "Lectures on European History, 1519-1648"—which will be cordially welcomed by all historical students.

* * *

The Cambridge University Press announces the first volume of a translation of the "Digest" of Justinian, by Mr. C. H. Monro, who has already published several isolated "Titles" with translation and notes. The work is much wanted for the real study of Roman law.

* * *

The next volumes of the "Cambridge English Classics" will be "The English Works of Roger Ascham," edited by Dr. Aldis Wright; and "The Poems of Richard Crashaw," edited by Mr. A. R. Waller.

* * *

In the *Independent Review* for March Mr. W. Lewis Jones describes "The Educational Crisis in Wales," and Prof. J. G. Robertson writes instructively on "Georg Brandes."

* * *

Dr. Holland Rose contributes a timely and effective article on "The Prussian Co-operation at Waterloo" to the *Monthly Review* for March.

* * *

The *Preparatory Schools Review* (March) says the scheme for a Common Entrance Examination is taking shape, and it is hoped that the first examination may be held during the summer term. It is intended to give all schools belonging to the Association and containing twenty-five boys the privilege of holding the examination in their own schools—a concession suggested by the Committee of the Head Masters' Conference. The *Review* contains some excellent addresses and articles.

* * *

In the *Oxford Magazine* (March 9) "S.," writing suggestively on "The New University of London," says: "The new ideas have assumed definite and visible shape; they are embodied in the eight Faculties of Theology, Arts, Law, Music, Medicine, Science, Engineering, and Economics, which constitute the ultimate basis of the teaching University." We confess that to our vision at least the Faculty of Law has not "assumed definite and visible shape." Is there such a thing in fact? And, if not, why not?

* * *

The *Teachers' Guild Quarterly* (March 12) contains, with other interesting matter, Sir Oliver Lodge's Presidential Address.

* * *

The publisher of the *Hour Glass* (the transformed *Golden Penny*) will, on application, send parcels of copies for school use free and carriage paid.

* * *

The Board of Education, having definitely decided not to print the Official Register of Teachers, the editor of the *Schoolmasters' Yearbook* has decided to publish the list of secondary teachers (masters and mistresses) in Column B, correct up to March 31, 1904—some 5,400 entries with the particulars recorded in the official register. It will be issued shortly by Messrs. Swan Sonnenschein & Co.

General.

Prof. Simpson has been presented with a silver inscribed inkstand by his fellow-members of the Liverpool Architectural Society, on his exchanging the Professorship of Architecture in Liverpool University for the Chair of Architecture in University College, London.

* * *

Prof. Butcher has been presented with a testimonial by his Edinburgh pupils past and present.

* * *

Cambridge University has established a Lectureship in Economics for three years on the strength of the Girdlers' Company's grant of £100 a year for that period.

* * *

The Indian University Bill has been passed by the Viceroy's Legislative Council. The Viceregal resolution to abolish competitive examinations for the public services (not, of course, the Indian Civil Service), and to substitute selection of candidates on probation, seems a gravely retrograde step.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—Ed. *E.T.*]

THE TEACHING OF BOTANY.

British Association Committee's Report.

To the Editor of "The Educational Times."

Sir,—It was not until some time after the publication of the December number of *The Educational Times* that I saw Prof. Henslow's article criticizing the recent Report of the British Association Committee on the Teaching of Botany in Schools. I shall be glad if you will allow me to state the following facts.

The Report does not consist of contributions by "three independent writers," Prof. Miall, Mr. Seward, and myself, but is the Report issued as approved by the Committee (consisting of Prof. Miall; Mr. Harold Wager; Profs. J. B. Farmer, J. R. Green, T. Johnson, Marshall Ward; Dr. Kimmins; Mr. Seward; and myself), with an independent contribution by Mr. Seward on "Inquiry in the Botanical Class," and one by myself on "School Gardens." I am responsible for the remarks on excursions, collecting, systematic botany, filling up of schedules, &c., only so far that I am a member of the Committee that issued the Report. I may say that I do not "despise" floral schedules; but I think many other branches of botany, such as experimental work in connexion with the food of plants, pollination, &c., more important.

In connexion with Prof. Henslow's remarks on our school gardens, I should like to say that the study of botany and the study of horticulture *do* go on together. For example: before classification is taken the girls draw from Nature and describe the principal plants belonging to certain orders, and in the forms where we study classification (namely, those preparing for the Junior Cambridge and London Matriculation Examinations) the girls own order beds, and try to obtain as many plants belonging to those orders as possible. To take, for example, order *Solanaceæ*, quoted by Prof. Henslow, the girls who owned that order bed last year did not *only* grow potatoes, but also tobacco plants, winter cherry, bitter-sweet, thorn-apples, tomatoes, &c., and all these types were studied. More potatoes and tomatoes were grown than other plants belonging to the order; but this was done partly so that the girls might be less ignorant of the growth of ordinary vegetables, and partly on account of the great interest taken in growing vegetables and sending them in to the school dinner.

Again, in order *Leguminosæ*, large quantities of peas and beans were grown; but other plants were present, such as broom, lupins, clover, vetches, goat's rue, medick, rest-narrow, astragalus bird's foot, &c.

In conclusion, I may say that I have no doubt that the Committee on the Teaching of Botany in Schools will carefully consider the criticisms and suggestions made by Prof. Henslow.—I am, &c.,

Lilian J. Clarke.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,147,020. Annual Income, £400,381.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums chargod, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

A SELECTION FROM
CASSELL'S EDUCATIONAL LIST.

THE GREEK HEROES.

Stories Translated from Niebuhr, with Additions.

With 4 Coloured Plates, and Numerous Illustrations.

Limp cloth, 6d.; or handsomely bound in cloth, gilt top, 1s.

"In 'The Greek Heroes' we have a delightful account of the deeds of the Greek heroes, translated, for the most part, from Niebuhr. Simply and well written, this version of those wonderful stories should be immensely popular, both in schools and homes." —*World.*

HISTORY.

A History of England. By H. O. ARNOLD-FORSTER, M.A. *Fourth Edition, Revised.* From the Landing of Julius Cæsar to the Present Day. Fully Illustrated. 816 pp., cloth, 5s.; or, handsomely bound, cloth gilt, 6s. 6d.

"There is something agreeably fresh about both the method and the manner of the writer, who shows good judgment in his choice of historical episodes on which to dwell and to enlarge. Various other features of the book have not only novelty of idea, but sound sense in their basis."—*Globe.*

CASSELL'S UNRIVALLED DICTIONARIES.

Cassell's New French Dictionary. (FRENCH-ENGLISH—ENGLISH-FRENCH.) Edited by JAMES BOÏELLE, B.A., Officier d'Académie; sometime Examiner in the University of London. 1,220 pp., demy 8vo, strongly bound in cloth, 7s. 6d.; or in half-leather, 10s. 6d.

"Quite the best dictionary of its size that has been issued."—*Globe.*

"The best at the price in the market."—*London Quarterly Review.*

"The best French and English dictionary of an ordinary size in existence."—*Critical Review*, Paris.

Cassell's French Dictionary. (FRENCH-ENGLISH and ENGLISH-FRENCH.) 696th Thousand. Revised and Corrected. 1,150 pp., cloth, 3s. 6d.; half-morocco, 5s.

Cassell's German Dictionary. (GERMAN-ENGLISH and ENGLISH-GERMAN.) 317th Thousand. 1,120 pp. *Cheap Edition.* Cloth, 3s. 6d.; half-morocco, 5s.

Cassell's Latin Dictionary. (LATIN-ENGLISH and ENGLISH-LATIN.) 142nd Thousand. *Cheap Edition.* 3s. 6d.; half-morocco, 5s.

Cassell's Educational Catalogue will be forwarded post free on application.

CASSELL & COMPANY, LA BELLE SAUVAGE, LONDON, E.C.

Ralph, Holland, & Co.'s Publications

Suitable for the Oxford and Cambridge Local Examinations and the Examinations of the College of Preceptors.

Full and complete CATALOGUE post free on application.

AN ELEMENTARY AND INTERMEDIATE ALGEBRA.

With Exercises and Answers. By the Rev. J. LIGHTFOOT, D.Sc., M.A. Crown 8vo, 472 pp., strongly bound in cloth. **Price 4s. 6d.**

This valuable new work covers all the Algebra generally required for the Preliminary and Intermediate Examinations at the Universities. A special feature is the very clear and interesting treatment of graphic methods.

Specimen pages post free on application.

"A well arranged practical book, well up to modern requirements."—*Head Teacher.*

"Logical development; principles rigorously established."—*Educational Times.*

"A most valuable introduction to the study of algebra." —*Irish Teachers' Journal.*

"The teaching is unimpeachable and healthy. We wish success to this fine exposition of algebra."—*Schoolmaster.*

"An excellent treatment of the whole subject."—*Education Gazette* (issued by the Department of Public Education, South Africa).

"The matter is very logically arranged, and the illustrative examples are perfect models of mathematical reasoning and statement."—*Teachers' Aid.*

"A first-rate book. It covers much ground, is full of lucid explanation, has abundant examples, is capitally planned, and possesses some unique features. Altogether, it should take a high place among the best of modern school books."—*Board Teacher.*

"Among newer mathematical text-books suitable for the use of young students there are few that have come under our notice that are so good as 'An Elementary and Intermediate Algebra,' by Dr. Lightfoot. . . . The book is a most commendable piece of work and deserving of high praise."—*School Guardian.*

"In spite of the large number of algebra books on the market, we cordially welcome the appearance of this one. It is well arranged, and presents the subject in logical steps: the teaching is driven home by concrete illustrations; and what innovations have been made are distinct improvements."—*Practical Teacher.*

To be obtained through all Booksellers, or post free at published prices from—

THE SCHOOL JUNIOR SERIES.

Books suitable for the

College of Preceptors' Second Class Certificates,

and the

Oxford and Cambridge Junior Locals.

ARITHMETIC, THE JUNIOR. Adapted from **The Tutorial Arithmetic.** By R. H. CHOPE, B.A., of Kingswood School, Bath. 2s. 6d.

"Will prove very suitable for students preparing for the Junior Locals and College of Preceptors' examinations."—*Practical Teacher.*
"A more than usually satisfactory book."—*Teachers' Monthly.*
"A modern arithmetic, based on sound educational principles."—*Schoolmasters' Year Book.*

BOOKKEEPING, JUNIOR (or THE PRECEPTORS'). By THOMAS CHALICE JACKSON, B.A., LL.B. Lond., Barrister-at-Law. 1s. 6d.

"The book is an excellent one."—*Accountants' Magazine.*
"We can recommend this practical work for secondary schools."—*Practical Teacher.*
"A very cheap and efficient guide to the subject."—*Schoolmaster.*

FRENCH COURSE, JUNIOR (or THE PRECEPTORS'). By ERNEST WEEKLEY, M.A. Camb. and Lond. *Second Edition.* 2s. 6d.

"The execution is distinctly an advance on similar courses."—*Journal of Education.*
"This volume should well serve its purpose."—*School Guardian.*
"A useful class book."—*Secondary Education.*

FRENCH READER, JUNIOR (or THE PRECEPTORS'). With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. 1s. 6d.

"A very useful reader with a good vocabulary and sensible notes."—*Schoolmaster.*
"The passages are carefully graduated in difficulty, and will afford excellent practice in unseens. As a class book it will be found useful."—*Teachers' Aid.*

GEOMETRY, JUNIOR. By W. P. WORKMAN, M.A., B.Sc. 2s. 6d. [*In preparation.*

LATIN COURSE, JUNIOR (or THE PRECEPTORS'). By B. J. HAYES, M.A. Camb. and Lond. *Second Edition.* 2s. 6d.

"A good practical guide. The principles are sound and the rules are clearly stated."—*Educational Times.*
"This is certainly better than most grammars that we have seen."—*Secondary Education.*
"The rules are clear, the matter is well graduated, and the examples and exercises are abundant and judiciously constructed."—*Schoolmaster.*

LATIN READER, JUNIOR (or THE PRECEPTORS'). By E. J. G. FORSE, M.A. Camb. and Lond. 1s. 6d.

"We heartily commend the book."—*Secondary Education.*
"It is one of the best books of translation that we have seen."—*School Guardian.*
"Teachers in secondary schools should make a point of seeing this work."—*Educational News.*

MECHANICS, JUNIOR (or THE PRECEPTORS'). By FABIAN ROSENBERG, M.A. Camb., B.Sc. Lond. 2s. 6d.

"The book possesses all the usual characteristics and good qualities of its fellows."—*Schoolmaster.*
"A practical book for this subject. It will be found exceedingly useful."—*Educational News.*
"A valuable text-book for students preparing for examinations in which the subject is required."—*Chamber of Commerce Journal.*

TRIGONOMETRY, JUNIOR (or THE PRECEPTORS'). Edited by WM. BRIGGS, LL.D., M.A., F.R.A.S. 2s. 6d.

"The book meets excellently the wants of the student reading for the College of Preceptors' examination."—*Guardian.*
"This book is intended for students preparing for the College of Preceptors' examinations, but is suitable for any one of that standard."—*School World.*

GENERAL HISTORY IN SECONDARY SCHOOLS.

LECTURE BY EMIL REICH, DOCTOR JURIS.

AT a joint meeting of members of the College of Preceptors and of the Assistant Masters' Association, held at the College of Preceptors on March 23, Mr. H. W. EVE, M.A., F.C.P., in the Chair, Dr. EMIL REICH delivered a lecture on "The Necessity of introducing the Study of General History into Secondary Schools on the basis of Geo-politics and Psychology," as follows:—

I am very sensible of the honour done me by this College and this Association in asking me to speak before them to-day. I feel especially honoured because I know that this invitation is not a mere invitation to lecture: most of you have attended so many lectures that the very name must begin to make you feel uncomfortable. No; what you would have of me is a candid expression of opinion on a subject which lies very close to my heart. There is no modification in the present system of secondary education which I should welcome with keener delight than an introduction into the curriculum of a regular course of general history. I feel sure you will credit me with perfect candour when I say that this desire is not the outcome of any blind infatuation for Continental methods of teaching. At other times, both on paper and by word of mouth, I have pointed out many grave defects which mark Continental education. The introduction of the study of general history into English secondary schools would, I feel, act as the necessary corrective of a system whose undoubted excellences in other directions nobody can fail to recognize.

Frequent discussion of the matter with friends and acquaintances has led me to certain conclusions. It is to be feared that only the vaguest, most indefinite, and illusory notions are generally current even amongst well educated and well read people as to the true nature of general history. It is essential, then, that I should first draw you a very clear picture of what I understand by the term, and that I should then, and then only, proceed to point out why I think that a course of general history should be added to the existing educational programme.

GENERAL PRECEDES PARTICULAR.

It is almost a commonplace to say nowadays that the study of the general must precede the study of the particular. But abstract statements of this kind are often allowed to pass for truth, not because they appear to be obviously right, but because their bare and abstract form does not excite any questionings. I should like to give you a few examples which will bring home this law in more tangible form. To take an illustration from everyday life, what artist, what draughtsman is there who would for a moment think of filling in the details of his figures before he had first sketched the outline? It is quite evident that he must first draw his outline. In philosophy, our every act of judgment proceeds from general to particular. It is the direction followed by our thoughts, and it is the direction which we must follow in passing judgments. Consider such a simple phrase as "This table is beautiful." It is quite clear that we must have some general idea of "the beautiful" before we can proceed to make a limited statement involving that idea.

ILLUSTRATION FROM THE NATURAL SCIENCES.

However, to turn from the abstract principles of epistemology to fields more practical, and reflect upon the growth of all modern sciences—first of the purely natural sciences, and then of those which deal with the humanities. No science can for a moment be called systematic unless it contains what the Germans call a "General Part," an *allgemeiner Theil*, in which are laid down the general facts and principles which will be found to hold good throughout the subject-matter. Following this general part comes the second part, dealing with particular phenomena. Try to imagine what physics would be without its general part: it would be an absolute impossibility. Perhaps one of the principal reasons why in the Middle Ages and in ancient or classical times so little headway was made in physics proper was because those

Digitized by Google

times ignored, or, rather, had wrong ideas about, the general physical properties of bodies. They did not understand the general principles of inertia, gravitation, fall, rigidity, &c. When, in the seventeenth century, these general qualities were laid down correctly by Galileo and Descartes, Newton, Huygens, and many others, then, of course, physics started along that glorious career of which we cannot even now foresee the goal. Even so with physiology: it owes an immense debt to those great men who laid down its general principles. The year when the first volume of Albrecht von Haller's "Elementa Physiologiæ" was published marks the point from which the real development of modern physiology began: when these principles were supplemented by the "General Anatomy" of Bichat, one of the great lights of science which shone to be extinguished by an early and tragic death, and when thereto had been added the cell theory of Schwann, then both physiologist and biologist had a firm basis upon which to work, and we have long seen, and see every day, to what results they are attaining.

Illustration from the Humanities.

If the preceding remarks hold good for natural science, they apply with tenfold force, and receive tenfold confirmation, in the history of the humanities, or sciences dealing with the history of man. It is well known that in the nineteenth century, principally through the influence of the so-called Historical School, law—and especially Roman law—became a branch of science so systematic and so exact that it has long ago merited the famous eulogy of Leibniz, who said that mathematics can alone compete in point of systematic *finesse* with Roman law. This high perfection was rendered possible principally by the fact that the modern "civilians," following the example given by Donellus in the sixteenth century, have done their utmost to bring the general part of law to its most technical and definite expression. In innumerable legal transactions arises the question as to the beginning, as to the technical conditions under which any jural relation arises or expires. This is, of course, essentially a question belonging to the general part. Or, again, we are confronted with the question as to who can perform a legal action (jural personality). This is also a question of general nature. But until Savigny (from 1840 to 1851) drew up his great work, "System des römischen Rechts," it had never been satisfactorily treated. Yet the whole of Savigny's eight volumes, treating only of the general part of civil law, are highly technical: how technical, and what that treatment is, and what an immense knowledge it necessitated, a glance at any one of its pages will suffice to show. It is from Savigny's book, and a few similar works by other great civilians, that dates the scientific treatment of Roman law. And it is from that time alone that the study of particular branches of Roman law has been pursued with profit. English law has as yet no general part, and its chaos is proverbial. The reasons which tend to the preservation of that chaos are at present beyond our subject; but the day will come when a scientific and disinterested jurist will arise and will write that general part of English law.

To take an analogous subject, namely, politics. It is superfluous to insist that the study of general politics must of necessity precede that of particular politics, and it has become almost a triviality to say that the student of politics must begin with the reading of Aristotle, Machiavelli, Hobbes, Montesquieu, Rousseau, and similar great thinkers on general politics.

When we come to philology we have our most clinching argument. The spectacle of the early attempts at philology provokes a smile nowadays, even when they were made by such eminent scholars as Scaliger and Casaubon. Their vain attempts to solve some of the knotty problems of Greek and Latin by quite irrelevant appeals to Hebrew are almost touching in their *naïveté*. It was not until the foundation of the study of comparative philology in its general principles by Bopp and by Pott—not until they had pointed out the guiding threads which control all Indo-German linguistics—that any real progress was made in the philology of individual European languages.

History must follow the Scientific Path.

Why, then, when a scholar attempts to know something of general history should it savour of an arrogant craving after historical omniscience? Why is it so hard to convince people that history, if it is to be put upon a scientific basis, must follow the path which has already been shown necessary to the advancement of all other scientific studies? History must have its general part. If you tell the average man that you wish to write a general history, he will regard you with an incredulous, if not pitying, smile. The complications appear to him immense, the subject-matter unwieldy in its mass. To write the history of England seems already to him a Herculean labour. It were better to limit yourself to the writing up of a few years of a Tudor reign. Already for so small a period you will find facts enough to keep you at work for a lifetime, if haply a single lifetime suffice. The average man, and in England more especially than elsewhere, has the specialist mind. All work beyond the limits of the most narrow and restricted specialism appears to him the most vague and unpractical, not to say *dilettante*, talk. As for a general part to history, it strikes him as mere haze. But general history is anything but vague. It is certainly no more vague than is general linguistics, and I think no one would venture to assert that the triumphs of linguistics, such as the laws of Grimm or Verner, are vague.

But the specialist has not grasped the one broad feature of science in general, that, the greater the mass of individual phenomena, the more simple will be the causes controlling them. Imagine the attitude of the specialist towards the Universe. Let us suppose him to be a native of Bristol, interested in the local history of that city. The causes which have contributed to the city's rise, prosperity, and decline are no doubt very numerous. Their investigation monopolizes the time of the local specialists. How much more numerous and complicated, he will think, must be the controlling forces of the history of England, which contains many cities like Bristol! The causes of universal history must increase in geometrical progression. Happily the fact of Newton's cosmic formula comes to our help and proves that the specialist is wrong in his supposition of an increasing number of causes of increasingly complicated and vast phenomena. The specialist is beginning history at the wrong end. The time has not yet come for writing a history of Bristol, or of Bath; it has not come for writing the history of England. We may begin now to write the history of Europe, and when we have accomplished this we can proceed to develop the particular history of Europe in its component countries. If we begin by specializing, by contracting historical myopia from a continued contemplation of some minute detail, we are lost. It is only in the most grandiose and general movements of history that we can hope to establish any sound correlations between facts. We can endeavour to solve such a question as why did the Greeks invariably graft all their political institutions on the idea of a πόλις, or one small, highly individualized city State. Why did they never form territorial States?

Principles and Details.

Our ability to solve questions of this genus does not at all imply that we are necessarily acquainted with all the myriad details underlying them; though unfortunately this is generally the common notion. There is an interesting parallelism in the case of the late Prof. Max Müller. His philological labours you are all well acquainted with, and you know how in support of philological laws he often quoted words and even phrases from almost every imaginable Indo-European tongue: it was this feature which contributed with unreasoning people to his immense prestige, for they imagined him to have a fluent knowledge of all the languages he appealed to for evidence. He was inundated with letters and documents for translation out of and into every tongue from London to Vladivostok, and when these communications were returned with regrets the senders were exceedingly chagrined, and some undoubtedly considered themselves the victims of an imposition. This is precisely the attitude of mind in which the general historian is welcomed. You may know many languages, and know no linguistics. You may know many agglomerations of historical facts, but be entirely ignorant of general history. What I claim, then, for history is its right to receive an *allgemeiner Theil* without which it can make no progress. Such a general part you will see, I hope at all events, by means of the comparisons I have drawn, to be highly technical and by no means vague. You cannot fail to have seen how little the minute study of isolated historical facts has really advanced us. The documents of the French Revolution, for instance, have been subjected to the most scrutinizing study. Masses of letters, reports, and papers of all descriptions have been edited and published until they fill whole libraries. Histories of the French Revolution fall from the press in an unending stream: all the new evidence is turned to account; an interesting and picturesque detail is added now and then; yet all these side-lights and front-lights, head-lights and rear-lights, sub-lights and super-lights have as yet only succeeded in making the darkness surrounding that great event more painfully visible. As far as real knowledge, the knowledge of the "why," is con-

Digitized by Google

cerned, we are no further advanced. The old explanations will not fit. "It was the misery of the people" is too vague: the misery had been far more acute many times before, but had led to revolts, not to a revolution. The microscopic method of history-writing has broken down. It has so far ended only in skilful, talented, picturesque, but unenlightening *précis*-writing, and in nothing else.

General History in Secondary Schools.

But to come to the second half of my lecture. Why should the teaching of general history be introduced into the secondary schools? Because, first, it is a principle of pedagogy now almost commonplace that the evolution of the individual mind goes upon parallel lines with that of humanity in general. Now, since we have demonstrated that all sciences have only then been put upon a solid basis when they have first been given a general part, so the individual mind will never reach solid knowledge unless it proceeds in a similar way.

Effects of Premature Specialization.

It is impossible to estimate at anything like their proper value the disastrous effects produced in this country by an all too early specialization. The boy, after a few years' preliminary study at school, probably in most instances already restricted, with a view to the special subject which he is subsequently to take up, sees his various studies docked one after another, until at the age of fourteen, or very shortly after, he is already a confirmed and incurable specialist; for it is very soon after this age that he will come in a public school to the momentous dividing of the ways. He must choose his road and abide by the result. He will go on to the classical side, or the modern side, or the scientific side, or even the history side, though this latter, alas! is in more than one school an excuse for politely shelving a boy who has developed no pronounced abilities or inclinations. It is quite true that in several instances the magnanimous parents allow their dear son the benefit of the free choice of what line he will take up. But what a choice it is! It would be very much like the doctor who placed a row of physic-bottles before his patient and told him to select the mixtures which should suit his case. But more often there is no free choice. The matter is indifferent as regards the result. The boy with the natural party spirit of his age has but scant respect for the sides of the school which he has not graced with his person. The further he proceeds along the path of his speciality the narrower becomes his mental horizon. If he knows the titles of the branches of study which he does not pursue, he is an exception to the general rule. As for having the faintest idea of the subject-matter of those branches, it is quite out of the question. His mind soon loses that elasticity which is so precious a quality of the young mind, but which, of course, if constantly suppressed, must become atrophied. He gets accustomed to thinking in the most limited of spheres. He will probably develop only one attitude of mind, be only able to handle questions in one way, and to all subjects with which he may in after life have to deal he will apply that method—as a rule, a very inappropriate method. But what is most fatal is that he has lost all sense of proportion. He has no notion of the relative importance of things. Suppose him to be a student of classical literature, he will have no definite idea as to the relative importance of classical literature to literature in general. Admitting that he is an exceptionally bright boy, and that by some chance or by his singular energy has acquired a taste for letters in general, he will still have little idea of the relative position of letters to art as a whole. He stands, as it were, upon the extreme verge of human knowledge, and his own education, like a rush-light, has permitted him to see only a few paces from himself: beyond he sees impenetrable fog, in which lie hidden all the rest of history, art, and science. What can he know of all this? He cannot tell whether human knowledge ends abruptly a few steps from him or whether it extends into infinity.

This lack of proportion must inevitably put him out of sympathy with the majority of his fellow-beings—that is, it must injure him socially. With such whose sphere of knowledge is not his own he can have intellectually but little sympathy. Their interests are so absolutely foreign to his that he cannot enter into them or appreciate them, even as a sympathetic layman or outsider. If those he meets, as is most likely, have gone through the same curriculum with himself, they will have so much the same stereotyped kind of ideas that the contact of their minds will have little in it that is stimulating. We need not, then, be surprised that the friendships which he forms are somewhat taciturn—that his club is a place of hushed meditation—I would not say of gloom—rather than a bartering place of thought and novel ideas.

The pity of it all is that the system misses its mark. If it is not conducive to social *camaraderie* we might be consoled for this drawback by its immense practical utility. If the system made us get on, we might reconcile ourselves to paying the price at which that progress is purchased. All ideals have their penalties: the realization of even a minor ideal costs a pretty penny; so that we need not feel aggrieved if we have to pay for intellectual and practical progress. But surely it is a bitter thing to pay a very long price and not to secure our own half of the bargain. Unhappily, this is what happens. Intellectual progress has never been the work of specialists. The great scientific pioneers and the great discoverers have invariably been the most broad-minded of men, the most comprehensive of men; they have been ("sit venia verbo") generalists. I need hardly give illustrations. Perhaps you may remember that the discovery of the fertilization of orchids was due not to a specializing botanist, but to Darwin. The scientific basis of antiseptic, and hence aseptic, medicine was the work not of a doctor, but of a man primarily a chemist—M. Pasteur.

But, perhaps, I am being misconstrued. I do not mean that a man is to fritter away his time in trying to acquire universal knowledge. No one would impute to me, I hope, such an absurd thought. What I mean is that it is our business in youth, when the mind is so marvellously receptive, to get a *conspectus* of knowledge, to derive a sort of plastic idea of what man knows, to fix our intellectual bearings, so that we may, at all events, locate our own position. Every man cannot, of course, become a chemist or a physicist; but it is every man's duty to have a very definite notion of what chemistry and physics are.

Personal Experiences.

At the risk of being personal I must here for a moment diverge. There are things which I want to say, but which I do not want to assert as mere airy statements without any solid foundation. They are statements based, I beg to tell you, upon long, solid, and I think I may say not jaundiced, observation. My opportunities of observation have been exceptional. In the course of the last ten years I have been brought constantly into contact with specimens of what is generally considered the Englishman at his best. They are mostly young men fresh from two or three years at Oxford or Cambridge. With them, as lecturer, I have come into hourly contact; many have lived under my roof for months at a time, and I have been able to watch their development. I may safely put their number at at least fifteen hundred—all typical examples of first-class English educational training, public-school and University.

Prophylaxis against Isms.

It is seldom that we can pass through many years of life, certainly not after twenty, without running into collision with some unhappy victim of an ism—socialism, spiritualism, anarchism, or some other oddity or crank. Unlike the diseased man, the intellectual invalid is no friend of isolation. His one desire is to infect others. Owing to the glibness and persuasiveness given him by his malady he is a very dangerous centre of contagion. Humanity will not allow us to do away with him; so that our only safeguard is in prophylactic measures. We must make the general population immune. There is one sovereign serum against such eccentrities as spiritualism, materialism, &c.: we must inoculate our children with a sense of proportion. The narrower we make their minds, the more prone they will be to run off at a tangent into some kind of oddity or craze. How many a young man's head have I seen turned by a wave of atheism, or vegetarianism, or shall I say even palmistry! Now palmistry may be the most estimable of institutions; but it is hardly the kind of thing we should expect an average educated man to go mad over. A little sense of proportion would allow him to put all these "isms" in their proper places; he would see that the majority of them are very old ideas, furbished up again to look new, that they have long ago been threshed out, and that what little true grain they contain has received its full share of recognition.

The Sense of Proportion.

Now, I beg to state in (if you permit me to say so) uncompromising fashion that a study of the outlines of general history, political, intellectual, and institutional, will do more than anything else to correct this vitiated sense of proportion.

Digitized by Google

Politically it will certainly do much; for it is in political views that the sense of disproportion is most grossly exaggerated. A country's strength must be based not only upon a true knowledge of its strength, but also upon a consciousness of its weak points. No nation is wholly strong. But this knowledge cannot be had without some standard of comparison. I do not think that I mistake the case when I say that the average Englishman's idea of Europe is England set in a ring of Montenegroes. France has a little importance; perhaps Germany, too, has a very slight significance; but, as to such countries as Italy, Spain, Austria, or Hungary being of any weight—why, the notion would seem to him too absurd. It is highly improbable that he has any adequate idea of Italy. Now, general history will give him, in clear and definite outlines, the lines of development along which have proceeded European intellect, European art, European politics, and European commerce. Certainly, the institutional, artistic, and intellectual part, the German *Kulturgeschichte*, must not be passed over.

Geo-Politics and Psychology as Bases.

This study of general history should be based upon geo-politics and psychology. I will speak briefly later on of my notions of history as a scientific study; but here I may say that, merely from a pedagogical point of view, I believe this to be the correct method. When the boy is shown the connexion between geography and history, and personality and history, it arouses in him that sense of human interest which is the most powerful incentive the young mind can have to learn, and the most ready means of indelibly impressing knowledge. General history offers one more pre-eminent advantage as a study: it can be begun at a very early age. To go into rather more detail, I think that already between twelve and fourteen the boy might begin, and that in two or three years he might easily get through a preliminary course which would firmly fix in his head a frame-work of historical categories. Subsequently he might fill out this frame-work by a more detailed course. I should suggest a double set of text-books, one short and brief for the learner, the other with a full pedagogical apparatus for the teacher. In the teacher's text-book would be found an abundance of illustrative matter, examples, and maps, with which to fill out the learner's outline. But this, of course, is a matter which would be advanced by discussion.

Ethical Considerations.

In putting forward the plea that history should be taught on the lines of geo-politics and psychology, I have not acted out of mere motives of utilitarian expediency. The young mind will no doubt more readily and permanently absorb the facts put before it if it is taught to look for the guiding thread of geography or psychology which holds those facts together. But in this system of history there is more than an artifice of pedagogy. I would not wish for a moment to underrate the value of high moral and high ethical ideals, especially in the contingencies of private and individual life. In the making of history, international history, they have, however, had little place. Humanity *en masse* has, as a rule, been impelled by less noble, if more traceable, motives: humanity *en masse*, when it has been driven to fight and driven to self-sacrifice, has had some very tangible, some very concrete, object in view. History, being subsequently written up by the estimable individual historian, has been made to parade in an ill-fitting moral cloak; but, unfortunately, the moral explanation of history almost invariably breaks down under even a moderate weight of criticism.

The Constant and the Variable.

Neither is man so iniquitous; it must be confessed that the career of nations, the objects for which they struggle, and the tendencies which they exhibit, have, as a rule, been imposed upon them, as it were, in spite of themselves. Their needs and their ambitions have been forged in Nature's workshop, and they must, and do, pursue these ready-made needs and ambitions, or perish. The great constant underlying all historical phenomena is supplied by Nature, by mother earth, in the form of physiographic or geographical conditions. To borrow the term of analytical geometry, we conceive geography to supply us with what we may call the *abscissæ* of history. Geography is, then, not all that we require, in order to trace the historical curve: it supplies it with one element—whence are we to take our *ordinatæ*? These, I think, we are to find in human psychology. Psychology forms the variable—*i.e.*, personal—element, the action of which we must trace with regard to a fixed geographical constant, first to be determined.

In summing up, we may say, then, that general history is the only study by which we think the bearings of the young mind can be fixed with regard to most of the great problems by which later in life it will be encountered; and that this study should be based on the two elements—first, of Nature, in the form of geography; and, secondly, the action of the human mind or heart (psychology), which will give the subject the greatest amount of human interest.*

Mr. Butler said the lecturer had raised his subject to a high plane, and dealt with it in the upper regions; but they as teachers had to apply the principles enunciated in somewhat lower regions. In dealing with young minds they could not quite follow the scientific lines suggested, and they had to consider exactly how these principles could be applied in the class-room. He agreed that it was desirable that a course of general history should be taken in all secondary schools, and also that the pupils should begin that course at an early age. The aim of the teaching should be to give to pupils a general idea of the course of events, and this could not be achieved without first laying stress on certain facts. The way in which these facts were presented to the pupil would depend upon the skill of the teacher; but no generalization would be possible without in the first place paying attention to the facts. The chief obstacle to the introduction into secondary schools of such a course was the lack of a suitable text-book, as very few teachers were capable of dealing with the subject from their own general knowledge. In the text-books now in use the most important events in the history of the human race were often dismissed in a few lines, while less important events were fully dealt with: this fault was repeated in the teaching with the result that the sense of proportion, on which the lecturer had laid so much stress, was altogether destroyed.

Mr H. L. Orchard fully endorsed the views expressed by the lecturer: the keynote of the paper seemed to him to be the inculcation of a sense of proportion, and in this he heartily concurred. As for the general study preceding the study of the particular, he thought that this method was now above criticism, especially inasmuch as the particular is almost invariably found to be a particular application of the general. The method, as a teaching method, was to be valued for three reasons: because a general study points out the correlation and interconnexion of things; because children analyze before they synthetize; and because the knowledge of the general immensely facilitates the study of the particular.

The Chairman remarked that the ideas expressed by the lecturer had been dealt with by Auguste Comte, and been successfully adopted by Prof. Beesly in dealing with Roman history, and his lectures afforded a far better general idea than could be obtained from those books which went more fully into detail. In teaching general history care must be taken to present the broad facts in such a way as to be comprehended by young minds, and teachers should guard against the danger of allowing the children to over-estimate the amount of the knowledge they have obtained.

Dr. Reich having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

ADAM MARTINDALE.

A COUNTRY SCHOOLMASTER OF THE COMMONWEALTH TIMES.

By Prof. Foster Watson, University College, Aberystwyth.

(*Continued from page* 151.)

II.—Adam as Teacher and Preacher.

Adam's first teaching appointment was in the family of a Mr. Sherington at Eccles. He was engaged to teach the child and read prayers. He was, however, soon required to do menial work. His master was "high and tyrannical in his carriage." He required Adam to do extra work which was impossible because of the large amount already entrusted to him. When Adam protested, his employer quoted texts from the Scriptures (especially Titus ii. 9 and Job xxi. 13) against servants answering their masters. The sons followed their father's example, till their tutor made up his mind he would as lief lead bears as take charge of them.

He then became schoolmaster at Holland, in the parish of Wigan. He complains that in the days of constant alarms (the great Civil War) parents were afraid to send their children to school. He removed to Rainford in a few months, expecting to receive the same rates as his predecessor, and expecting, "as was customary," that parents would find him his diet by turns. The latter part of the agreement was not kept, and Adam became dependent on his father. At Rainford he wrote a book of arith-

---

*The views contained in this lecture will be found developed at length in the Introduction to the lecturer's "General History" (Macmillan & Co.), now going through the press, in which are embodied the results of his life work.

Digitized by Google

metic after the method of Record, Hill, and Baker. He attempted to shorten their methods, and added an original appendix on the extraction of the roots of fractions. He confesses that he knew nothing of decimals, logarithms, or algebra. The MS. was lost. Martindale next became clerk to a foot regiment, and attempted to carry on his studies, for which he had time.

He got away from this "hated life" amongst soldiers in 1644, and was appointed to the Free School at Over-Whitley in Cheshire. He tells us he had his name written over the door of the school, had a full school and a pretty store of rich men's sons. Moreover, he added to his income by "making writings" for his neighbours. He now set himself to profit his scholars and to improve himself. "I had some near fit for entering into Greek, and I thought it wisdom, having got the start so much of them, to keep myself so far before as none should tread upon my heels." Accordingly he started to study Isocrates, Hesiod, Musæus, Theognis, when the overwhelming suggestion was made to him that there was a great want of ministers of religion, and that he ought to fit himself for the work. It was a "thing so far above" him; but he was won over, and set to work on Hebrew and Keckerman. He then heard of a book called "Horologium," pretending to a method confirmed by experience, wherein boys may be well grounded in the Hebrew Grammar in twenty-four hours; but he adds: "I limited not myself to twenty-four days." In his study of logic he found endless trains of sub-divisions in his text-book. He wanted another book. But whose? Aristotle "was not for the teeth of such a novice as I was." He reads Ramus, Smith, Brerewood, Dr. Sanderson, Hereboord, and Derodon. Lastly, he rejoiced when he found the treatise of Burgersdicius. He studied ethics in Eustachius, and for physics he liked Bartholinus, and Comenius "best of all." In metaphysics he fed on Eustachius, Bartholinus, Crakanthorpe. These rather confounded him; but he found help in Suarez. He soon became an acceptable minister, though he soon found that he would rather have remained at Whitley School. This was about 1645, and Martindale seems to have remained a minister till the Act of Uniformity in 1662. He was then ejected from the living of Rotherston (which was worth £50 a year). Justices of the peace were very severe in Cheshire against Nonconformists being allowed to be tutors in families. What was Martindale to do?

I thought of physic, he says, and was encouraged by an antiquated practitioner, promising me books and other assistance; but I considered the time would be long, practice uncertain, and, above all, that the lives of men were not to be jested with, and bethought me of a less dangerous study—viz., of some useful parts of the mathematics; and, though I was now almost forty years old, and knew little more than arithmetic in the vulgar way, and decimals in Jager's bungling method,* I fell close to the study of decimals in a more artificial manner, logarithms, algebra, and other arts, since by me professed, in which work I was encouraged and assisted by noble Lord Delamere.

Martindale was still keeping school; but the Conventicle Act made him throw it up, and with it the 20s. or 25s. a week on which he lived. He removed to Preston and commenced school again; then he became tutor in the family of Sir Charles Houghton, and afterwards in other families. Then he went to Manchester as a teacher of mathematics. The head master of the Free School sent to him for instruction in that subject some of his best boys. Still he had his difficulties.

One that was a teacher in the town, and some others that thought themselves fit for such work, that knew nothing of decimals, logarithms, or the new species way, contemned and assaulted me, sending me questions, which I quickly returned answered and propounded another to every one that had sent any to me, and then I had done with them. But I had much ado to keep in my scholars from revenging my quarrels too far; for when they, by skill in logarithms, could in an hour answer such a question as these professors could not solve in a month (as, for example, such as this: What is 51. 3qs. a day to continue 300 years worth in ready money at £6. 12s. 6d. per cent.?), it was next to impossible to keep my pragmatical youths from running down these old soakers with their Record's Arithmetic. As for old Richard Martinscroft, who had more true skill in him than they all, though he was a Papist, he never opposed nor contemned me, but was always civil to me and communicative.

Such was Adam Martindale's force of character that he continued preaching and ministerial work in defiance of the law; but joined with it the teaching of mathematics. He at one time acted as tutor in a family for which he was paid (what he calls his usual rate) 15s. a week, besides diet and horsemeat; but was allowed other employment which cleared 15s. more. Even before this time he had been trying to arrange a University career for his eldest son; but subscription to creeds stood in the way, though he had actually taken him to Cambridge. Martindale was a fond father, and many are the passages in which the stern puritanism is thrown aside before the melting heat of the father. His son was for a time usher at Merchant Taylors' School; but, by imprudence, lost his post and threw himself on his father's charge. A school was found for him first at Lymm and afterwards at Northwich, where his scholars "came well on," and "tablers [boarders] began to come to him," when the son's wife caught a fever. As Adam states it, his son "begged of God that he might die in her stead, and was taken at his word."

For the rest there is little to add. Martindale wrote a number of theological treatises. He also wrote "The Country-Survey Book; or Land Meter's Vade Mecum" and "A Token for Shipboys; or plain sailing made more plain and short than usual." They both bear inscriptions, to which he was so well entitled—the one "By Adam Martindale, a friend to mathematical learning"; the other "A lover of the mathematics."

OXFORD AND CAMBRIDGE.

A Royal Commission suggested.

By the Rev. H. W. P. Stevens, LL.D., Vicar of Tadlow.

Cambridge has lately been honoured by a visit from the King and Queen. One direct outcome of their presence amid the Masters, Professors, and Fellows is a strong desire to set forth the many unsatisfied wants of the University. But any such movement tends to bring shortcomings into evidence. One and a half millions, it is stated, could be used in furthering much needed as well as much varied University work. A little addition and division of corporate endowments published in the *Reporter* show how a tiny band of undergraduates may be the appanage of a Master and a certain number of Fellows. Unhurried opinions are uttered by those who know the inwardness of the working of the different "societies," as well as by those who are brought into touch with the ideals nourished by the men educated under the wings of these corporations. It is found that when these ideals are exposed to the unsentimental work-a-day light of practical life they seem to be lacking in many things which make for the resourceful self-trusting citizen.

By the recent two Education Acts persons recognized as experts are to be incorporated on Educational Boards. This idea needs development. It suggests a kind of supreme Consultative Board for the two older Universities: in part elected, in part co-opted, in part nominated. The special work of this body would be of the highest importance. Arrangements could be initiated for new professorships, anticipating, for example, the private munificence of a Prof. Skeat and a Prof. Stanton. Here might be the guiding authority of subjects, as well as of dates for entrance scholarships. What is learned to work well in other Universities might have a fair trial with us. We find, for example, that abroad the specialist does not inevitably begin his career as a teacher immediately on taking his degree. At each University (as a rule) in Germany and France there is to be found some recognized intellectual leader drawing a cosmopolitan class. The students are drawn by the professor, not by the University.

It is an interesting comment on this that a late number of the *Granta* strongly objects to undergraduates being called students. To bring knowledge to the learner, and to induce inspiration of teaching, there might be an interchange between the Universities by the professors of their spheres of influence. *Mutatis mutandis*, the Unions find this plan useful; and learning, not examinations, is the *raison d'être* of a University.

As to business matters, much could be saved by co-operation. All the corporate estates might be under the control of a body somewhat akin to the Ecclesiastical Commissioners. A smaller arrangement would be, one system of mutual insurance. In many cases returns of income-tax can be claimed with success. Movements which are the outgrowth of a somewhat luxurious standard

Digitized by Google

of living need watching. The amounts spent on dances (in some cases over £600 for a single dance) by the men, and on dinners and teas to the men by the tutors, cause a feeling of wonderment to the intelligent outsider. It is a national instinct that social institutions should be allowed to develop themselves. A healthy development is helped by timely skilled guidance. That can come only from trained experience.

THE TEACHERS' REGISTER.

Amended Regulations.

The Teachers' Registration Regulations have been issued (1d.) as revised up to March 1, 1904. The following alterations were made by an Order of the Board, dated February 2, 1904:—

(1) An addition in Section 3 (1) and in Section 4 (1), here italicized:

(1) He must have obtained a degree conferred by some University of the United Kingdom, *or have obtained a recognized degree conferred by some other approved University*, or . . . .

(2) The addition of two alternative subsections in Section 3 (2):

or (iii.) have passed an approved examination in the theory and practice of teaching, and have spent at least five years as a student-teacher under supervision at a recognized school (not being an elementary school), where the head master has entered into an approved agreement with him for his proper training as a student-teacher; or (iv.) have passed an approved examination in the theory of teaching, and have, with the sanction of the Board, undergone training at one of the Universities or training colleges mentioned in Appendix D to these Regulations or some other recognized institution for the training of secondary teachers, and served as a student-teacher under supervision at a recognized school (not being an elementary school) for periods which amount in the aggregate to not less than one year, and have produced evidence of ability to teach.

(3) An addition (italicized) in Section 3 (3):

He must, *unless he has spent at least five years as a student-teacher under Subsection iii.*, have spent . . . .

(4) An addition to the interpretation Section (15):

A "student-teacher" means a student in training for the teaching profession, who does not count as part of the school staff, and in respect of whom a fee is paid or some other definite provision for the expense of training is made, and in respect of whom approved provision is made for (*a*) adequate opportunity for the study, under supervision, of the theory of education, including the principles of teaching, discipline, and school management; (*b*) sufficient practice, under supervision, in the actual work of managing school classes and in the application of theory to practice. Provided that a student-teacher in a school recognized for the purpose of Regulation 3 (2) (iii), may receive a salary and count as part of the school staff.

(5) Addition to Appendix D: Institutions, &c., for the Training of Secondary Teachers. (The star indicates "added by the Board of Education"):

Cherwell Hall, Oxford.* St. Mary's Hall, Stonyhurst,* provided that one year's practical training be given at one of the following schools:—(1) Stonyhurst College, Blackburn; (2) Mount St. Mary's College, Chesterfield; (3) Beaumont College, Old Windsor; (4) St. Francis Xavier's College, Liverpool; (5) St. Ignatius College, Stamford Hill; (6) Wimbledon College; (7) The Catholic College, Preston; (8) St. Aloysius' College, Glasgow; (9) St. Ignatius College, Malta. Clapham High School, Secondary Training Department.* London Day Training College, Secondary Department.* The Incorporated Froebel Educational Institute.*

(6) A further addition to Appendix D:

List of Schools Recognized for the purposes of Regulation 3 (2) (ii).

Croydon: High School, Wellesley Road. Exeter: The High School (Maynard's Foundation). London: High School, Wemyss Road, Blackheath, S.E.; High School, Norland Square, Notting Hill, W.; High School, West Hill, Sydenham, S.E.; North London Collegiate School for Girls, St. Pancras. Manchester: High School for Girls, Dover Street. Oxford: High School, Banbury Road. Sheffield: High School, Rutland Park, Clarkehouse Road. Sutton: High School, Cheam Road. Wimbledon: High School, Mansel Road. Winchester: The High School. Windsor: St. Stephen's College, Clewer St. Stephen. Winscombe: Sidcot School. York: Bootham School; The Mount School (Girls).

[See also under "Fixtures," and under "Literary Items."]

COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A meeting of the Council was held at the College, Bloomsbury Square, on March 19. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Butler, Prof. Adams, Mr. Armitage Smith, Rev. J. O. Bevan, Mr. Bidlake, Rev. J. B. Blomfield, Rev. A. W. Boulden, Mr. Bowen, Mr. Charles, Mr. Eve, Miss Jebb, Mr. Kelland, Rev. G. E. Mackie, Mr. Millar Inglis, Mr. Pinches, Miss Punnett, Mr. Rushbrooke, Dr. R. P. Scott, Rev. J. Stewart, Mr. Storr, and Mr. Vincent.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Professional Preliminary Examination was held on March 1–3, and had been attended by 344 candidates.

He reported that an Examination for Certificates of Ability to Teach was held on the 25th to 27th February, and was attended by 12 candidates.

He reported the steps that had been taken to bring the views of the Council on the question of school-leaving certificates before the Consultative Committee.

In response to a communication received from the Teachers' Registration Council, it was resolved that the College would undertake to act as one of the bodies who would be willing to ascertain and report on the ability to teach of applicants for registration under Reg. 5 (2) b.

The Report of the Examination Committee was adopted, and syllabuses of the requirements in science subjects—Botany, Animal Physiology, Zoology, Geology, Physics, and Chemistry—for the three grades of the Diploma Examinations were approved.

It was resolved that a resolution should be submitted, in the name of the Council, to the next General Meeting to alter clause 1 of Section 1 of the By-Laws, so as to include among those qualified for admission to membership of the College persons whose names are included in Column B of the Teachers' Register.

The following persons were elected members of the College:—

Miss H. M. Barnes, L.C.P., Grammar School for Girls, Worcester.
Mr. H. I. Judson, 8 Huntingdon Road, East Finchley, N.

The following books had been presented to the Library since the last meeting of the Council:—

By the Bureau of Education, Washington.—Report of the Commissioner of Education for the Year 1902, Vol. II.
By Edward Arnold.—Symes's Story of the East Country.
By G. Bell & Sons.—Bell's French Course, Part II.; Yates's Lucian's Vera Historia.
By A. & C. Black.—John's Macaulay's Lives of Goldsmith and Johnson.
By C. J. Clay & Sons.—Goodwin's Demosthenes on the Crown; Shuckburgh's Sophocles' Oedipus Coloneus; Payen-Payne's Gautier's Voyage en Italie; Verity's Shakespeare's Hamlet; Woodward's English Poetry for the Young, Parts I. and II.
By W. B. Clive.—Norwood and Watt's Tacitus' Agricola.
By Methuen & Co.—French and Boardman's Practical Chemistry, Part II.
By Relfe Brothers.—Haynes's Geography of Great Britain and Ireland; Morgan's Algebra for Junior Forms.
Calendar of University College, London.

COLLEGE OF PRECEPTORS.

PROFESSIONAL PRELIMINARY EXAMINATION—CLASS LIST.

March, 1904.

The Supplementary Examination by the College of Preceptors for Certificates recognized by the General Medical Council, the Law Society, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, the Board of Education, and other bodies was held on the 1st, 2nd, and 3rd of March, in London, and at seven other local centres, viz., Birmingham, Bristol, Cardiff, Fraserburgh, Leeds, Liverpool, and Manchester. The following candidates obtained Certificates:—

First Class [or Senior].

Pass Division.

Beresford, G. W. *ch.*
Brown, I. S. *h.g.f.*
Child, D. E. *e.f.*
Ground, F. W.

REVIEWS.

THE "ODYSSEY."

The Odyssey of Homer in English Verse. By Arthur S. Way, M.A. (6s. net. Macmillan.)

Mr. Way's translations of great classical works have justly been received with appreciative welcome, and none more so than his version of the "Odyssey." The present is the third edition. The delay in issuing it may be held to be recompensed by the fresh labour that the author has expended upon it. While not altering the essential features of the work, he has subjected the translation to a thorough revision, patiently carried out, and he has reduced the licence in rhyme, and given special attention to the technique of the rhythm. Practically, then, the version has now assumed its permanent form. When all is done, the poem is inevitably not Homer, but it will give the non-classical reader as good a notion of the "Odyssey" as he is ever likely to obtain till he has mastered the original; and in any case it is a fine poem, which ought to be in the hands of general readers as well as at the elbow of the student. There may be some initial difficulty in seizing the somewhat unfamiliar rhythm, but a little attention and practice will quickly surmount that. Take, for example, the delicate ophthalmic operation on the sleeping Cyclops (IX. 375, *ff.*):

Then, then did I thrust beneath a heap of embers the pole,
Till it glowed in the Fire-god's breath; and with brave words cheered the soul
Of each, that none might shirk his part in the desperate work.
But when the stake into flame would have burst in a little more,
Green wood as it was, and became of a fiery glow all o'er,
Then I snatched it out of the fire, and drew nigh, and my comrades stood
Around, and their courage rose higher, some god unto us being good.
Then, taking the stake, my men—right sharp was the fierce red tip!—
Plunged it into his eye: I held it above, and so
Whirled it around, as when one boreth the beam of a ship
With a drill, and his fellows ply the long strap to and fro,
As on either hand below him they stand, and it swiftly doth go.
Even so through his eye we crushed and we whirled the fire-tipped wood;
And around the hot stake gushed a fountain of hissing blood:
And singed by the fiery glow were eyelid and eyebrow around
The burning ball, and below at the roots was a crackling sound.
And as when in a smithy a man dippeth axe or adze he hath made
Loud hissing into a pan of water to temper the blade—
For of suchlike handicraft good shall the edge of the iron be found—
So, as we plunged in the wood, was the eyeball hissing around.
And he yelled, and the cavern rang in thunder to that wild roar;
And backward in terror we sprang, as with frantic hands he tore
The torturing stake from his eye, and dripping in crimson spray
We saw the blood-gouts fly, as he dashed it madly away.
And the man-beast's hideous yell pealed out through the startled night
To his fellows that round him dwell by windy ravine and height.

Though coloured here and there with deeper tints, the transcription is fairly close, and throughout spirited. More in keeping with the prevailing tone of the "Odyssey" is the eventual recognition of Odysseus by Penelope (XXIII. 104, *ff.*, 205, *ff.*):

But Penelopê passing wise made answer, and spake to her son:
"My child, mine heart in my breast is sorely amazed this day.
And I find no word to ask, and I know not what to say:
And I cannot, I cannot look in his face:—but, if of a truth
He is very Odysseus come back to his home, we twain, good sooth,
Full well shall be known of each other ere long; for tokens there be,
Yea, many a hidden sign, that we know, and none but we." . . .

O knees that as water are weak, O heart's shield suddenly broken!
Who save Odysseus could speak it—the spell of the secret token?
She stayed not, but weeping she sped to him; dear loving arms hath she flung
Round the neck of Odysseus, his head she kissed, and she cried as she clung:
"O lour not upon me, Odysseus—thou knowest—thou needs must know,
Who in all things art wisest of men!—but the gods have meted us woe,
Who begrudged that from life's sweet morn we twain, ever side by side,
Should pace to the threshold of eld, to a love-litten eventide.
O be not indignant for this, O let not thine anger be hot
That when first I beheld thee with such-like greeting I welcomed thee not!
For shuddered mine heart in my breast with a sickening fear alway
Lest a stranger should come, and with false words cozen and lead me astray.

Digitized by Google

But now—forasmuch as thou tellest a token clear as the light— . . .
O husband, the hard heart yields to believe in this sweet hour!"
Then thrilled in his heart and his eyes a passion of crying yet more,
And, clasping his winsome-wise beloved, he wept full sore.
O sweet as the first far sight of the land unto them that swim,
Whose ship by the Sea-god's might on the wild sea storm-rack dim
Hath been split by the mad wind's roar and the shock of the surge down-crashing,
And but few have swum on to the shore through the wave-crests hoary-dashing,
With the salt from the leagues of sea overcrusting their bodies around,
And with rapture from bane they flee, and they tread on the blessed ground;
So joyed that wife to behold her beloved, with white arms flung
Round his neck, and she could not unfold them, but lovingly, lovingly clung.

Mr. Way is a poet as well as a translator. This beautiful rendering of the "Odyssey" enriches our literature, and will give permanent pleasure to thousands that are unable to enjoy the poem at first hand.

Educationists of Modern Europe.

Studies in the History of Educational Opinion from the Renaissance. By S. S. Laurie, A.M., LL.D., Professor of the Institutes and History of Education, University of Edinburgh. (6s. Cambridge University Press.)

Prof. Laurie sets aside the plan of presenting a general historical outline of opinion, having found it in practice to be "uninstructive as compared with an analytic exposition of the doctrines of eminent writers themselves"; but at the same time he indicates the leading characteristics of the historical development. This course probably secures a keener interest—at any rate for the particular writers brought into prominence—though the concatenation of progress is apt to be less sharply impressed. Prof. Laurie first sketches the "great and complex historical movement" of the Renaissance as a necessary preliminary to an intelligent comprehension of education as affected by it. This naturally leads him to compare the influence of the Renaissance on secondary schools at the time with the influences on them at the present time:

> The restoration of antiquity gave the chief direction to the work of the secondary schools for obvious reasons. It was only at school and in the University that a knowledge of the ancients could be obtained. Latin and Greek had to be laboriously acquired, whereas the active-minded student could read his Dante and Petrarch and all vernacular contributions to literature without the help of masters. This theory of secondary instruction soon prevailed over all Europe, and still governs the curriculum and aims of British secondary schools.

Well, not exactly; not even the prominence of Latin and Greek is maintained, while the vernacular and other subjects have edged themselves into most schools. But the fundamental question for us is the comparative importance of subjects, and the classics cannot be said to hold now the comparative importance that they held at the Renaissance. Prof. Laurie, indeed, is "personally disposed to think that there are no instruments that can compare with Latin and Greek literature if our purpose be culture." But our purpose, for good or for evil, has been widened, and even Prof. Laurie admits that culture comes off badly in "what we call 'classical' education." Fortunately, he at last puts his finger on the true question: "Can we think of no other scheme of education which will conserve the past while fitting for the living present? Can we find no modern definition of Humanism?" We do not find, however, that he furnishes an answer.

The chapters are all very well worth perusal. There is occasional incompleteness, no doubt, which Prof. Laurie sometimes naïvely explains by telling us that he has "not had time to study" this or that; but then he does not profess to give a complete history. He starts with Vittorino da Feltre, and the fullest treatment in the first period falls to Ascham and Montaigne. The modern period dates from 1600, commencing with Bacon, who "more than any other man is to be revered as the 'first of the Moderns'": truly enough, from the insular point of view, but hardly from the standpoint of the history of European thought. The other representatives for this period are Comenius, Milton, Locke, and Spencer. Incidentally we may note that Prof. Laurie is more considerate with Ratke than Prof. Adamson was the other day; for he says: "there was, perhaps, more of the light of originality in Ratke than in Comenius," and "there can be no doubt that Ratke anticipated him in all his general principles of method": indeed, "to him, and not to Vives or Andreä, Comenius was directly indebted" (page 149). There is much discriminating criticism in the notice of Milton's "Tractate." Locke is handled very fully: Prof. Laurie regards him as "the most important English writer on education next to Ascham," and is of opinion that "no writer on education surpasses him" (page 181); he is "the greatest of them all, in spite of his attitude to language and literature, and his encyclopædism," and, "notwithstanding his debt to Rabelais, and still more to Montaigne, his educational conceptions are in the truest sense his own" (page 234). The treatment of Spencer is strenuously adverse, Prof. Laurie's philosophical standpoint being so very different; but it is, perhaps, not essentially unfair. The volume is not so discursive as one would expect from the author; but still there are many incidental passages that come in unexpectedly to enliven rather than to impede or to confuse the narrative; and altogether it is piquantly written, and very interesting and suggestive.

Early Arabian Society.

Kinship and Marriage in Early Arabia. By the late W. Robertson Smith, Adams Professor of Arabic in the University of Cambridge. New Edition. Edited by Stanley A. Cook, M.A. (10s. 6d. Black.)

The first issue of this celebrated work, "from its freshness and originality, attracted the attention of Semitic scholars and anthropologists in 1885, and laid the foundation of all subsequent research in this department of studies." The present edition is enriched with notes and references collected by the author during the nine years that elapsed between the original publication and his death, and by Prof. Ignaz Goldziher, of Budapest, who had undertaken to see it through the press, but was unable to do so. Mr. Stanley A. Cook has done his part with discretion, alike scholarly and reverent. The references to Robertson Smith's complementary work, "The Religion of the Semites," are not the least useful of his contributions. Notwithstanding the great advance in the study of totemism, he has done well to let the author's chapter on it stand, with such additions and corrections as he indicated. It is, as Mr. Cook says, impossible to determine how far or in what directions Robertson Smith would have recast his views in the light of later investigations; and the same remark applies to all the recent developments of Babylonian discoveries. The sound procedure was to give the work its proper historical position as prepared by the author, and that is what Mr. Cook has efficiently done. We may recall the fact that Robertson Smith "wished to speak not only to general students of early society, but to all who are interested in old Arabia," that his results "have a very important bearing on the most fundamental problems of Arabian history and on the genesis of Islam itself," and that the sidelights on Hebrew practice are numerous and important. The publishers have done good service by presenting the work in a form as near as possible to the latest conceptions of the distinguished and lamented author.

A Distinctive Text-Book of Geometry.

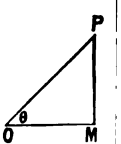
A New Geometry for Schools. Part I. By S. Barnard, M.A., and J. M. Child, B.A. (Cantab.). (4s. 6d. Macmillan.)

In this work on elementary geometry we have probably one of the most important, and certainly one of the best, of the text-books whose production is to be traced directly to the movement for reform in the methods of teaching the subject. Part I. deals with the geometry of plane figures, and includes the substance of Euclid's first six books, together with many additional propositions, as well as a discussion of some of the specially useful elementary applications of algebra and trigonometry. The influence of the recommendations of the Mathematical Association Committee and also of the Cambridge Syndicate may be felt throughout. Divided as the work is into distinct sections, of which the first provides an informal consideration of fundamental principles, the second a practical course, whilst the third is devoted to the theory of geometry, its pages offer facilities for the selection of varied curricula suitable for students of different classes. The table of contents in itself gives a very valuable series of enunciations of problems and of theorems. The general excellence of the definitions, of the enunciations, and of the mass of the demonstrations both of problems and of theorems, will be admitted at once and universally; and, were it not for the importance of urging the pressing need for accuracy in every detail, whether with reference to logic or to language, the temptation would be to pass over (in review) the instances of failure in these respects. The noting of a few cases will be sufficient to draw the

Digitized by Google

attention of the authors to the value of a close revision, and it is hoped that it will also influence future writers.

Consider first the construction for bisecting a given finite straight line as treated by this book in common with most others on practical geometry. The student is told to describe arcs with the extremities of the line as centres and "any radius greater than half the line." Now (1) he is not definitely instructed to use the *same* radius in each case; and (2) the method is liable to be criticized as essentially involving argument in a circle, since to place the point of bisection is the object of the construction. Of course, any author may contend that he meant "any the same radius greater than half the line by an excess which is unmistakable," but Euclid's method (or its equivalent) leaves no possible doubt and is therefore superior. Again, when bisecting a given circular arc AB the student is instructed to describe with A and B as centres, and *any* the same radius, arcs cutting at C; but *any* the same radius will not ensure cutting, and, seeing that the reader is at this stage able to bisect the chord AB, the necessary condition "greater than half the chord" should clearly be inserted. Still another instance in conclusion. It is undoubtedly true that the trigonometrical functions are defined for acute angles only; but why teach at all that PM/OP is the sine of the acute angle θ, only to have to explain that MP/OP, and *on no account* PM/OP, is to be called the sine of this same angle as soon as the consideration of angles not confined between the narrow limits of zero and $\frac{1}{2}\pi$ is undertaken?—Briefly, if reform is to be a true reform, it must guard against substituting new defects in place of the old ones which it is rightly anxious to eliminate.



CAMBRIDGE ENGLISH CLASSICS.

Thomas Hobbes: Leviathan; or the Matter, Forme, and Power of a Commonwealth, Ecclesiasticall and Civill. The Text, edited by A. R. Waller. (4s. 6d. net. Cambridge University Press.)

The idea of the new series of "Cambridge English Classics" is a fortunate inspiration, which promises great satisfaction to the reader and lover of English literature as well as to the scholar. The present volume is an excellent example of the purpose and principle of the series. It is a very important work, especially in point of matter, but also in point of literary execution; and it is faithfully reproduced in a very handy form, with good type, light paper, and agreeable get-up. The scrupulous fidelity of reprint from the last edition revised by the author or from the most authentic posthumous edition will give high value to the series in the eyes of students, especially in the case of works that are not very readily accessible, or that bear a high price. At present the works are not to be accompanied by notes other than purely textual and bibliographical. Some will require notes more urgently than others. It may be hoped that, in a future edition, something will be done to point out the essential importance of this great work of Hobbes, and to trace the influences that tended to mould its doctrines and that flowed from it. Hobbes tells us, indeed, that it was "occasioned by the disorders of the present time" (1651), but we are thinking especially of the history of the ideas, and particularly of the more important ones, those in Part II., on civil society—his unacknowledged debt to Jean Bodin on the one hand, and on the other the debt of the Analytical Jurists to him. Meantime, however, we gratefully acknowledge to Mr. Waller and the publishers the boon of an accurate and convenient text of a famous book at an exceedingly reasonable price.

GENERAL NOTICES.

CLASSICS.

The Poems of Gaius Valerius Catullus. With an English Translation by Francis Warre Cornish, M.A. (7s. 6d. net. Cambridge University Press.)

A handsome, not to say luxurious, volume, well befitting Catullus. Mr. Cornish gives text and translation on opposite pages. The text he has investigated independently, with results that come very close to Dr. Postgate's edition, from which he has "never departed without reluctance." The translation is in prose, carefully weighed and delicately fashioned on the original. It should make Catullus more familiar, for he is by no means easy without some such help; and a more trustworthy guide we do not know. Occasionally, as in the opening of Carmen xxxi., the English is not immediately plain without the Latin—an all but inevitable deception of the translator, unless he be rigidly checked by some one that is ignorant of the original, and reads the English quite independently. However, the work is very ably and very carefully done. The appended notes are brief, offering alternative renderings or textual remarks on obscure and difficult points.

MATHEMATICS.

Elementary and Intermediate Algebra. By J. Lightfoot, D.Sc., M.A. (4s. 6d. Ralph, Holland & Co..)

Dr. Lightfoot's "Algebra" is designed for junior University students, and takes into special consideration the work required for their preliminary and intermediate examinations. It presents some novelties in both method and arrangement, although in the main it follows the course of other good elementary text-books. The points exhibiting originality of method are all deserving of careful notice, even though the suggested changes are not all evident improvements. The alterations in respect of order are in every case made with a view to securing a more strictly logical sequence, so that the acquirement of a knowledge of the science may be at the same time a medium for mental discipline.

First Stage Practical Plane and Solid Geometry. By G. F. Burn, A.M.I.Mech.E. (2s. Clive.)

The volume owes its origin to the issue of the new Syllabus of the Board of Education, and is intended to meet the altered requirements of students taking the Elementary Stage in Practical Geometry. "Any special merits of the older course have, however, not been disregarded." A number of useful references and explanatory notes are introduced, and the little book is fully illustrated by clearly reproduced diagrams.

ENGLISH READERS.

Messrs. Cassell start a series of "Pictorial Reading Books" with *Æsop's Fables* and the story of *The Swiss Family Robinson* in words of one syllable (6d. each). Each little book has four coloured illustrations, and the former has also a number of pictures in black and white.—Messrs. Cassell also publish as a "new supplementary reader" *The Greek Heroes* (6d.), five ever attractive stories translated from Niebuhr, with additions. All the three books make good reading at home as well as in school; and they are nicely got up.

Macmillan's Story Readers, Books I. and II. (10d. and 1s.), by Evelyn Sharp, offer simple lessons on familiar matters, and provide good reading collateral with the more formal books.

"Pitman's King Edward History Readers" have developed a fresh branch, "The Preparatory Readers." Book I. (10d.), *Stories from Early English History* (B.C. 55 to A.D. 1485), written by Mrs. Hancock, member of the Sunderland Education Committee, is simple and interesting. *The Story of our own Times* (from 1837) is fully representative in subjects. Both books are lavishly illustrated.

Hertfordshire: "a reading-book of the county," by H. R. Wilton Hall (1s., Blackie), aims "to connect the geography and history of the county with the geography and history of the country." The idea is a good one, and it is very successfully carried out. The illustrations are numerous and good.

Two or three series of "Country" Readers published by Messrs. Macmillan deserve particular attention. Of the *Junior Country Readers*, by H. B. M. Buchanan, B.A., and R. R. C. Gregory, Volume I. (1s., for Standard I.) tells a number of "True Animal Stories," with lists "of words to learn," and "transcription exercises"; and Volume III. (1s. 4d., for Standard III.) consists of "Talks on Country Life," expressed in simple language and conveying much information about "some of the domestic and wild animals of an English farm, which can only be obtained by personal experience and observation." Then *A Country Reader*, II. (1s. 6d.), by Mr. Buchanan, is concerned with the goat, the donkey, the cat, our common reptiles, fish of our ponds and streams, pastures and grasses—in more advanced form. Again, *Senior Country Reader*, III. (2s.), by Mr. Buchanan, deals with manures, crops of various kinds, cottage gardens, pigs and poultry, hares and rabbits, pigeons, and the management of a grass holding—all in a thoroughly practical fashion. Finally, *Lessons on Country Life* (2s. 6d.), by Messrs. Buchanan and Gregory, constitutes "a guide to the study of the animals of the farm, their habits, uses, and treatment, together with notes on the wild animals, wild birds, and injurious insects common to our woods and fields." There are eighty lessons. From these volumes children may learn not only reading, but also a vast amount of country information of a useful character, and the beginnings of a habit of observation and inquiry. The books are well written in view of the varying ages of the pupils, and they are fully and admirably illustrated.

ENGLISH COMPOSITION.

Essay-Writing for Schools. By L. Cope Cornford. (4s. 6d. Murray.)

Mr. Cope Cornford explains by a sub-title that his book is "a practical exposition of the principles of this form of composition, illustrated by models and examples drawn from the English classics, and designed to meet the requirements of the public examinations." Necessarily it is based on the wide presupposition of the elements of composition, though there is added a large appendix illustrating and

Digitized by Google

briefly discussing one set of these elements—"common errors in the use of words and their inflexions" (much of which is usefully borrowed from Dr. W. B. Hodgson's excellent work "Errors in the use of English"). Mr. Cope Cornford properly insists on practice, and he lays down his explanations and suggestions for the business of composing an essay with a directness, clearness, and firmness that will appeal strongly to the mind of the student. The examples are mainly descriptive and narrative passages, or mixed literary pieces. Without laying undue stress on formal rules for any mode of composition, we cannot but think that a more systematic and more complete exemplification of aspects of the modes—at any rate, of description and narration—would have been more efficient. At the same time, the treatment, so far as it goes, is fresh and businesslike, and neither teacher nor student can fail to profit by it and by its example. Some of the "common errors" may be questioned. "The starting *of* the machine" is certainly not a "mistake," and there is no good reason for omitting the "of." "The preposition placed at the end of the sentence is both ugly and incorrect"—sometimes; but the usage is idiomatic, and often avoids a worse result. "This is not the book he referred *to*" is much preferable to the use of a lumbering "which" ("to which he referred")—a form that nobody but a conscious grammarian would ever dream of employing. "Who is there?—*Me*": Who on earth but a grammarian would answer "I"? "She is not even so big as *me* [I am]." We have no objection to "I am," of course; but to object to "me" is to persist in knocking one's head against a stone wall. "Me" is idiomatic; no grammarian can get over it, and why should one waste one's energy against the inevitable? It is enough to warn against indubitable blunders of real importance.

MODERN LANGUAGES.

The Plays of Molière in French. With a new Translation by A. R. Waller. 1666–68. (3s. 6d. net. Grant Richards.)

This volume follows the first, which we noticed a month or two ago. It contains "Le Misanthrope," "Le Médecin malgré lui," "Méliceste," "Le Sicilien," and "Amphitryon"—all belonging to the years 1666–68. The juxtaposition of the French and English texts is extremely convenient for readers of every class. Mr. Waller's rendering is really a translation, and not a mere traduction, though he keeps very close to the original; and he shows much skill in overcoming the peculiar difficulties of his author. The get-up is exceedingly handy and artistic. The edition will be completed in eight volumes.

A Companion to French Verse, with Poems for Recitation. By H. J. Chaytor, M.A. (Murray.)

Mr. Chaytor sets forth in a brief and plain form the rules that need to be observed for the intelligent reading of French verse, and provides a judiciously selected anthology for illustration and practice. Dramatic poetry is not exemplified: "it is better read *en bloc* than in excerpts." The expression is occasionally clumsy, but the meaning is quite clear. Useful notes, biographical and metrical, are appended. The volume furnishes adequate assistance, and will be found to be very serviceable.

How to read French. By H. Blouet, B.A. (9d. Relfe.)

M. Blouet gives short and simple explanations of the pronunciation of French sounds that can be taught without the personal help of a teacher, together with a graduated series of easy passages for reading, followed by a vocabulary. An attractive and helpful little book.

Spanish Self-taught (Thimm's System). Edited by W. F. Harvey, M.A. (1s.; 1s. 6d. cloth. Marlborough.)

The general plan of the series is followed, the first intention being to supply the practical needs of travellers, commercial men, &c., in conversation. The book will be very useful for its main purpose. The pronunciation is particularly well explained and clearly indicated.

The Teaching of the Dutch Language in South Africa (1s. net, Longmans) contains a paper read at a Conference of Principals of Government Schools in the Orange River Colony on the subject by Dr. Brill, Rector of the Grey College, Bloemfontein, together with a letter addressed to the Rector by Mr. E. B. Sargant, Lord Milner's Educational Adviser, and pertinent official papers in an appendix. The pamphlet is very instructive on the language difficulty, which would soon cease to exist if Dr. Brill and Mr. Sargant were left to legislate on the matter. Obviously the two languages should be learnt together.

EDUCATION.

(1) *Herbart and the Herbartian Theory of Education: a Criticism.* By Alexander Darroch, M.A., Professor of Education in the University of Edinburgh. (3s. 6d. net. Longmans.) (2) *The Critics of Herbartianism, and other Matter contributory to the Study of the Herbartian Question.* By F. H. Hayward, D.Lit., M.A., B.Sc. (Lond.), B.A. (Cantab.), F.C.P., assisted by M. E. Thomas. (4s. 6d. Swan Sonnenschein.)

(1) Prof. Darroch presents five lectures that he delivered in the University of Edinburgh when he was still Lecturer on Educational Method and Psychology in the Church of Scotland Training College, Edinburgh, and assistant (we think) to Prof. Laurie in the University. He discusses Herbart's psychology and ethic and indicates their bearings on educational theory and practice. He comes to this (page 147): "The fundamental fallacy of the Herbartian school is the emphasis which it lays upon instruction. In opposition to this view, it is maintained that instruction is only the initiatory and preparatory stage; that it is in the training of the pupil to a knowledge of the relations embodied in the facts, and in disciplining him to the self-application of principles, that the work of education really consists. This is true not merely in the narrower sphere which we call theoretical, but applies in every sphere of activity, ethical or practical. I have shown that this error is due to the psychological basis on which the theory is founded, and the first thing we have to do is to become fully aware of this, and to realize that empirical psychology, whether that of Herbart or of other writers, can give us only partial guidance in our educational efforts." Prof. Darroch writes with lucidity and verve, and he stands apparently on the same philosophical and educational platform with Prof. Laurie. But, unfortunately, he proceeds on the assumption that Herbart's pedagogy is "derived," "deduced," or "developed," from his psychology, which was some years later by the calendar. Prof. James has told us, indeed, that "the former was not derived in any sense from the latter." Clearly, the assumption is not without risk, and, so far, it prejudices Prof. Darroch's argument. Dr. Hayward rubs in the objection, and others, with merciless energy and satisfaction.

(2) Dr. Hayward is an enthusiastic Herbartian. After a general introduction of comprehensive scope, he gives the history of Herbart and of his doctrines, reviews usefully the somewhat limited Herbartian literature in English, and then deals successively with fourteen critics of Herbartianism, mostly German. Prof. Darroch, moreover, is castigated in an appendix. The little volume condenses vividly and piquantly a very wide range of educational facts, thought, and criticism. We commend it cordially.

RELIGION.

"The Century Bible."—(1) *Genesis.* Edited by W. H. Bennett, D.D., M.A., Litt.D., Professor in New College and Hackney College, London. (2) *Judges and Ruth.* Edited by G. W. Thatcher, M.A., B.D., Mansfield College, Oxford. (3) *I. and II. Kings.* Edited by the Rev. Prof. Skinner, D.D. (2s. 6d. net each; 3s. 6d., leather. Jack.)

(1) Dr. Bennett opens the Old Testament series with a most able handling of Genesis on parallel lines with the New Testament series. He prints the text of the Revised Version, marking distinctly "the division of the text between the documents out of which Genesis was compiled"; and he supplies a very sufficient body of explanatory notes at the foot of the page. The introduction (63 pages out of 412) deals with (1) the message of Genesis; (2) the historical circumstances of the period; (3) how Genesis was written; (4) the traditions and the documents from which Genesis was compiled; (5) how Genesis has been handed down to us; (6) how our Genesis has been divided up into its original documents; and (7) the interpretation of Genesis, together with various tables based on the division of the text among the documents. The treatment will, of course, be too bold for some and too conservative for others. At any rate, it is scholarly and instructive, and gives an effective popular exposition of the more generally accepted results of modern criticism—results that all serious students should, at all events, be acquainted with. (2) Mr. Thatcher gives a plain and effective analysis of Judges, and thereon suggests "a probable history" of the origin and development of the canonical book. He has little scope in Ruth; but he says well all that need be said. The notes to both books are careful and scholarly, and afford all necessary explanations. Perhaps the summaries of the matter in the text might have been to some extent dispensed with. (3) Dr. Skinner has expended much labour upon his difficult books, and the careful reader will be very grateful for it. The introduction discusses (1) the historical and religious value of the work (with special insistence on the importance of getting close to "the actual facts—the solid unimpeachable realities—of Israel's history"); (2) the framework (the editorial formulas), (3) the compiler and his standpoint, (4) the second redaction and date, (5) the sources, (6) later additions and redactions, (7) the Greek version, and (8) the troublesome questions of chronology. The notes are full and pointed, and three important matters are handled in an appendix. There is a useful map of Syria, Assyria, and Babylonia, and an excellent plan of Jerusalem, as well as several illustrative figures in the notes. All the volumes are very ably treated, and the publishers have furnished the same admirable get-up as in the New Testament series.

AGRICULTURE.

Agricultural Geology. By J. E. Marr, M.A., F.R.S. (6s. Methuen.)

Mr. Marr writes with his eye on the schedule framed for the guidance of candidates for the International Diploma in Agriculture; but his book will of course be useful to a much wider circle than students reading for examinations in agriculture. Though technical terms are necessarily employed, the chapters are easy reading to any fairly well educated person. Mr. Marr treats of the general characters and composition of the more important rocks, with a view to building, metalling, and fertilizing; of the operations of the various

Digitized by Google

geological agents, so as to illustrate the conditions that cause and control soil formation and water supply; and of the strata of the British Isles in the order of their formation, with reference to the disturbing movements and their effects, in order to secure the true reading of geological maps. "Two kinds of geological maps," he says, "are of particular importance to the student of agriculture—namely, that kind which exhibits the distribution and variations in the characters of the superficial accumulations which lie between the solid rocks and the soil (if the latter be present) and that which exhibits the distribution and variations in the characters of the solid rocks," and "the student should be thoroughly conversant with the significance of the various records which are entered upon these maps." The exposition is simple and lucid, and the geology is consistently subordinated to the purposes of the agriculturist. The work is effectively illustrated by a coloured geological map and 104 diagrams.

Agriculture for Beginners. By C. W. Burkett, Professor of Agriculture; F. L. Stevens, Professor of Biology; and D. H. Hill, Professor of English, in the North Carolina College of Agriculture and Mechanic Arts. (3s. 6d. Ginn.)

This powerful combine of authors has produced a book that is comprehensive and practical, if not very big. They hold, on grounds of experience, "that agriculture is an eminently teachable subject," and they "are convinced that the theory and practice of agriculture can be taught at one and the same time," and they conclude that the training of the farm lad "must begin in the public schools." To the teacher they say: "Lead the pupils out into the field, make simple experiments before them, and have them also perform experiments. Let them learn directly from Nature." The authors treat of the soil, plants (and their diseases), orchard and field insects, farm crops, domestic animals, and farm dairying. The handling is quite simple and practical. The book, though primarily meant for American schools, may be readily utilized here. Besides a frontispiece, there are 212 figures.

NEW EDITIONS AND REPRINTS.

Messrs. A. & C. Black issue a sixpenny edition of *A Historic View of the New Testament*, by Percy Gardner, Litt.D.—the Jowett Lectures delivered at the Passmore Edwards Settlement in London, 1901. Prof. Gardner "has modified a few passages," in deference to criticisms, but has "not found any serious or important alterations to be necessary." The inquiry is thoughtful, sober, and instructive; and the type is excellent.

Messrs. Watts publish for the Rationalist Press Association (and by arrangement with Messrs. Smith, Elder, & Co.) *An Agnostic's Apology*, by the late Sir Leslie Stephen, in their "Cheap Reprints" series (6d.). The print is very good.

Mr. Harrap provides a "Shorter Course" of *Heath's Practical French Grammar* (3s. 6d., Heath's "Modern Language Series"), by W. H. Fraser, B.A., and J. Squair, B.A., Professors of the Romance Department, University of Toronto. A dozen pages of extracts for translation from English into French have been omitted; and the exercises in Part II. have been "entirely reconstructed and very considerably condensed," and continuous passages relating to daily life have been substituted for the detached sentences of the original exercises. The work is thus rendered more manageable and effective for younger students.

Mr. Stead has added to "Books for the Bairns" *The Story of Joseph and his Brethren* (No. 96), and *The Ancient Mariner* (No. 97), both illustrated by Brinsley le Fanu (1d. each).

Mr. Fisher Unwin presents a "complete popular edition" of Prof. Villari's standard *Life and Times of Savonarola* (pages xlviii+792), with all the original illustrations, at the amazing price of 2s. 6d. net. The volume is uniform in size and binding with the cheap edition of Morley's "Cobden."——Mr. Unwin has also republished Ebenezer Elliott's *Corn-Law Rhymes*, with other verses (2d.), reprinting from the two-volume edition of Elliott's Poetical Works (1876).

The University Tutorial Press (Clive) issues an enlarged third edition of *The Early Principate—a History of Rome*, 44 B.C.–138 A.D., by A. H. Allcroft, M.A. (Oxon.), and J. H. Haydon, M.A. (Lond. and Camb.)—an able, independent, and comprehensive work. Also a "second impression" of Prof. Stout's useful volume *The Groundwork of Psychology* (4s. 6d.).

Messrs. E. J. Arnold & Son (Leeds) issue a twelfth edition of *Hamlet* (2s. 6d.), and a tenth edition of *King Lear* (2s.), by Thomas Page, in "Moffatt's Plays of Shakespeare." Both volumes are thoroughly revised and somewhat enlarged, various new features being added. The annotations, &c., are comprehensive, careful, and instructive.

Mr. Elkin Mathews issues a third edition of Mr. Jonathan Nield's *Guide to the best Novels and Tales* (4s. net), revised and enlarged so extensively, especially in details, as to be almost a new book—a well deserved popularity.

We regret that the price of Part II. of Clowes and Coleman's *Elementary Practical Chemistry* (Churchill) was accidentally misstated in our last issue. It ought to have been 2s. 6d. net (not 4s. 6d. net)—the same price as Part I.

FIRST GLANCES.

Classics.

Latin Anthology, A, for Beginners. By George B. Gardiner, M.A., D.Sc., and Andrew Gardiner, M.A. 2s. E. Arnold.

[100 lessons. Careful and representative selection, with notes (specially directed to translation into good English) and full vocabulary. Excellent.]

Latin Course, Longmans', Part II. 2s. 6d.

[Pronouns, and onwards. Explanations unusually ample and lucid; exercises; vocabularies. Very serviceable.]

Tacitus. Agricola. Edited by Gilbert Norwood, B.A. (Cantab.), and A. F. Watt, M.A. (Oxon.). 2s. 6d. Clive.

[Introduction biographical, historical (with map), and literary. Notes full, pointed, and scholarly.]

Xenophon. Anabasis, IV. Edited by G. H. Nall, M.A. 2s. Blackie. Illustrated Greek Series.

[Map and illustrations; usefully annotated; no vocabulary.]

Mathematics.

Algebra for Junior Forms. By R. B. Morgan, B.Litt., L.C.P. 1s. 6d. Relfe.

[On modern lines. With fourteen diagrams.]

Annals of Mathematics. January, 1904. 2s. Published under the auspices of Harvard University. Longmans.

Arithmetic, Higher, Worked Problems in. By W. P. Workman, M.A., B.Sc., and R. H. Chope, B.A. 2s. Clive.

["For Civil Service and other advanced examinations."]

Arithmetic, Studies in Graphic. By the Rev. J. Lightfoot, M.A., D.Sc. 1s. 6d. net. Normal Correspondence College Press.

Army Classes, Mathematical Papers for. By H. S. Brabant, B.A. 1s. 6d.; with Answers, 2s. 6d. Relfe.

Geometry, A New, for Junior Forms. By S. Barnard, M.A., and J. M. Child, B.A. (Cantab.). 2s. 6d. Macmillan.

[In three parts—Introductory, Practical, Theoretical; definitions; recent examination papers; answers. Includes roughly Euclid I., III. 1–31, and easy parts of IV.]

Geometry, A School. By H. S. Hall, M.A., and F. H. Stevens, M.A. Parts I.–V., 4s. 6d. Also in sections: Parts I.–IV., 3s.; Parts III. and IV., 1s. 6d.; Parts IV. and V., 2s.; Part V., 1s. 6d. Macmillan.

Geometry, Elementary. By Frank R. Barrell, M.A., B.Sc., Professor of Mathematics, University College, Bristol. Section III. 1s. 6d. Longmans.

Geometry, Elementary. Part I. By Cecil Hawkins, M.A. 2s. Blackie.

[Straight Line, Circle, and Plane Rectilineal Figures.]

Science.

Phase Rule, The, and its Applications. By Alex. Findlay, M.A., Ph.D., D.Sc., Lecturer and Demonstrator in Chemistry, University of Birmingham. With an Introduction to the Study of Physical Chemistry, by Sir William Ramsay, K.C.B., F.R.S., Editor of the Series (Text-Books of Physical Chemistry). 5s. The "Introduction" separately, 1s. net. Longmans.

[First volume of an important new series: 118 figures in the text. Introduction historical; illuminative.]

Physics, Elementary, Practical and Theoretical. Second Year's Course. By John G. Kerr, M.A., LL.D., and John N. Brown, A.R.C.S. 2s. Blackie. (Science Handbooks for Laboratory and Class-room.)

[Dynamics, Light, Heat. Exposition effective; numerous questions and exercises.]

Strength and Elasticity of Structural Members. By R. J. Woods, M.E., Mem.Inst.C.E., Fellow and Assistant Professor of Engineering, Coopers Hill. 10s. 6d. net. Edward Arnold.

[Mainly for students of engineering.]

Zoology. By Buel P. Cotton, A.M., Professor of Natural Science in the Illinois State Normal University. Part I.: Descriptive. Part II.: Practical. 4s. 6d. and 2s. Heath. (Modern Science Series.)

English Primers.

Alphabet School, The Royal. By S. Croft. Primers I., II., and III. 6d. net each. Murby.

["A systematic phonic reader"; the system founded on Pitman's alphabet and worked by the shorthand signs; alphabet taught by rhymes; "stories for afternoon readings."]

Infant Reader, The Royal King. No. III. 7d. Nelson.

[Attractive; prose and verse; many illustrations.]

Pitman's Lessons in English. Book I., 2d; cloth, 3d.

[Includes "exercises in spelling, word-building, grammar, composition, and the correct writing of English." Intended "for use in Standard I."]

Reading made Easy. Part II. By A. Snell. 8d. Philip.

[New edition, revised and enlarged with the help of Miss Caroline Herford and Miss M. A. Wroe. Good system; interesting lessons.]

Digitized by Google

Spelling for Promotion, Macmillan's. By R. F. Macdonald. Junior, Parts I. and II., 2d. each; Intermediate, 4d.; Senior, 4d.
[Graduated on simple and effective plan, which "keeps in view the sound, the meaning, and the sign." Very helpful.]

FRENCH SERIES.

Black's Cours élémentaire. Contes des Chevaliers, by Mrs. J. G. Frazer. With Notes by F. B. Kirkman, B.A. (Oxon.). 1s. 6d.
[Contains the stories already issued in the two Term Readers "Chevaliers de Charlemagne" and "Amis et Amiles, Aiol."]

Blackie's Little French Classics. (1) Shorter Fables from La Fontaine, edited by A. H. Wall, M.A.; (2) Une Episode sous la Terreur (Balzac), edited by Alex. Wright, M.A.; (3) Scenes of Travel (Gautier), edited by W. G. Hartog; (4) Select Poems of André Chénier, edited by Mary Kennedy, B.A.; (5) Select Essays from Montaigne, edited by E. C. Goldberg, M.A.; (6) Selections from Pascal, edited by Alice Ritson; (7) Scenes from Les Fâcheux (Molière), edited by Mrs. D'Arcy Collier; (8) Le Château de le Vie (Laboulaye), edited by E. B. le François. 4d. each.——In the supplementary series, Le Voyage de M. Perrichon (Labiche), edited by C. H. Clarke, M.A. 8d.

Dent's Modern Language Series. (1) Première Grammaire Française, par H. E. Berthon, M.-ès-Arts Hon., Maître de Conférences à l'Université d'Oxford. 1s. 6d. net. (2) New First French Book. By S. Alge and Walter Rippmann. 1s. 6d. net. (3) Elements of French Pronunciation and Diction. By Benjamin Dumville, B.A., with Introduction by P. A. Barnett, M.A., Superintendent of Education in Natal. 2s. 6d. net.
[Excellent series; according to the newest ideas.]

Hachette's Popular French Authors. Histoire de la Princesse Rosette (Comtesse de Ségur). Edited by J. Maurice Rey, B.-ès-L., Officier d'Académie. 4d.
[Very simple and suitable. Brief notes and vocabulary.]

Heath's Modern Language Series. La Mère de la Marquise (About). Edited by Murray P. Brush, Ph.D., Department of Romance Languages, Johns Hopkins University. 1s. 6d.
[Bright story; piquant and graceful style. Brief biographical introduction; slender, but sufficient, notes; full vocabulary.]

International Modern Language Series.—Les Romanesques (Rostand). Edited by Henry Le Daum, Instructor in North-Western University. 1s. 6d. Ginn.
[Introduction biographical, literary, and metrical. Notes brief; some of them somewhat obvious. Fresh and interesting.]

A REALLY SIMPLE

First French Reader.

PREMIÈRES LECTURES.

Written and Edited by F. B. KIRKMAN.

Contains Descriptions of French Life, based on Photographs and Pictures, Prose Fables, and Simple Poetry.

CAREFULLY GRADUATED. REFORM EXERCISES.

Can be used either as an ordinary Two-Term Reading Book or as the Centre of a Complete Course of Instruction (60 Lessons) for older Beginners (Evening Classes, Pupil Teachers, &c.).

Beautifully Bound, Printed, and Illustrated.

Price only 1s.

Ready by N.U.T. Conference.

For Complete Catalogue, write to—

A. & C. BLACK, SOHO SQUARE, LONDON, W.

(Near Tottenham Court Road Central London Station.)

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL AND LOGICAL FOUNDATIONS OF INTELLECTUAL EDUCATION.

To be delivered by W. E. JOHNSON, M.A., Sidgwick Lecturer in Moral Science in the University of Cambridge.

SYLLABUS.

I. Provisional definition of education as a practical science. Its dependence upon psychology. Its connection with the normative sciences of logic, æsthetics, and ethics. Education must assume general agreement with respect to the ultimate ends of life. It is a science of means, not of ends. A comparison between the lecturer's standpoint in education and the theories of Herbart. How far intellectual, æsthetic, and moral education can be distinguished. The position of so-called physical education. The practical opportunities afforded to the teacher of contributing to psychological observation. The two chief methods of obtaining particular psychological data—(i.) the introspective, (ii.) the interpretative. Range, difficulties, and connections of these two methods.

II. General analysis of mental states. The three fundamentally distinct factors—knowledge, feeling, activity. These three regarded as mutually dependent, not as antagonistic. Especially in the higher forms of mental process, action is prompted by feeling and guided by knowledge; and such action is spoken of as the manifestation of the will. Different forms and different degrees of activity. Education as mainly concerned with the control of the conscious activities of the child. Preliminary definitions of such terms as conation and purpose, interest and attention, &c.

III. The classification of intellectual processes by reference to so-called faculties. Preliminary definitions of sensation, perception, observation, memory, imagination, conception, reasoning. The practical errors that have arisen from a false view of this classification—things connected which should be separated, and things separated which should be connected. The key for understanding the due connection and separation of educational aims and influences to be found in the principle of unity of interest. Interest as progressive, and as involving subjective activity. The various faculties developed *pari passu* as they are brought to bear upon any object of study. The growing stages of childhood distinguished by the objects of interest, rather than by the prevalent exercise of one or other faculty. Two-fold function of the teacher in regard to interest. The whole theory summed up in the doctrine of apperception.

IV. General account of intellectual development. Active and receptive phases—the former continuously increasing in predominance as compared with the latter. Parallel growth in mind and brain. Retentiveness and modifiability. Differentiation and assimilation. Powers of distinguishing and of connecting. Facility and familiarity. The different forms of analysis and synthesis. Mental process and mental product. Permanent acquisitions and variable applications.

V. Perception as a direct and purposive co-ordination of sensory and motor elements. Temporal and spatial synthesis. Acquisition of physical aptitudes by practice. The gradually attained control and co-ordination of the sense-organs and organs of movement. Sense-discrimination aided by motor production—speaking, drawing, singing, &c. Imitation. Observation as systematized control of perceptual processes. The interest of curiosity. Prospective and retrospective attention and "meaning." Continuity of purpose and interest in such activities as listening and watching.

VI. Association or suggestion. Distinction and relation between integration and redintegration. Association (*a*) between parts contained in a common whole, and (*b*) between wholes containing a common part. Fundamental principles underlying all cases of association. Different forms of association. Activity and interest involved in association. Control of association by purpose. Pedagogic maxims based on the doctrine of association. Technical aids to association. Co-operative and antagonistic associations.

VII. Memory—ambiguities of the term. Some writers limit it to reminiscence. Broadly it includes the reproduction, in some kind of connected whole, either (*a*) of movements or (*b*) of images or (*c*) of ideas. In particular, verbal memory is based on the repetition, in a connected series, of the articulatory movements of speech. Man's intellectual powers as dependent largely on the control and imitation of these movements. Language as aiding and aided by accompanying images and ideas through a double process of association. The free reproduction, in varied forms of language, of significant trains of images and ideas. The teaching of composition. First beginnings of constructive thought.

VIII. Imagination: its three kinds, reproductive, interpretative, and originative. Imagination and perception cover the same ground. The power of imagination gauged by (*a*) its vividness and consequent influence upon feeling, (*b*) its subservience to purposive control. Childish imagination not more vivid, but less controlled, than that of the adult. Difficulties in exercising the child's imagination through the medium of words. Practically, imagination cannot be separated from ideation. Illustrations from the teaching of geography and history. The connection of imagination with æsthetic feeling and appreciation. Poetry and literature.

IX. Ideas and conceptions. How knowledge passes from the relatively particular and indefinite to the relatively general and definite. The development of knowledge as evidenced by the presence of agreements or differences, not by the absence of differences or agreements. How to test a child's powers of thought by reference to his use of language. Ignorance of the conventions of adult language often confused with defect in the power of perceiving agreements or differences between things. Power of understanding to be measured by complexity and consistency in the use of language. The child's employment of nouns, adjectives, verbs, &c. The concrete and the abstract.

X. Terms and elementary propositions. Comparison between the psychological and the logical account of the intension and extension of terms. Logical definition and division. The proposition as expressing the analytic-synthetic function of thought. The conceptions of thinghood, causality, and personality. The judgment as arising out of an attitude of interrogation or apparent inconsistency. Suspense and conviction. The apprehension of truth and reality as involving counterlimitation between subject and object. The developing conception of self in its relation to other selves.

XI. General judgments and reasoning. The avoidance of inconsistency. Deductive and inductive inference. Distinctions between the psychological principles of discovery and the logical principles of proof. The teaching of deductive and of inductive sciences. The importance of the heuristic method in both. Such teaching should promote (*a*) activity, (*b*) understanding, (*c*) retention. Danger in the teaching of inductive sciences of encouraging unsound reasoning. Educational aspects of the well known methods of induction.

XII. New formulations and general summary of principles, with further applications.

C. R. HODGSON, B.A., *Secretary.*

OXFORD UNIVERSITY PRESS.

Notes on Analytical Geometry. An Appendix. By A. Clement Jones, M.A., Ph.D. Crown 8vo, cloth, 6s. net.

Experimental & Theoretical Course OF GEOMETRY. With or without Answers. By A. T. Warren, M.A. Second Edition, thoroughly Revised, with many new Propositions and Figures. Crown 8vo, cloth, 2s.

Mathematical Gazette.—"This forms a valuable addition to the school library. We feel sure that those who use it will find it suggestive and stimulating. We welcome the short chapter on the construction of certain solids, being convinced that to show boys and girls how 'rule and compass' work on the flat helps them to plan and carry through the construction of various models (trays, boxes, &c.) is one of the surest ways of awakening and keeping awake their interest in geometry."

Lectures on the Logic of Arithmetic. By M. E. Boole. Crown 8vo, cloth, 2s.; or, interleaved with writing paper, 3s.

Educational Times.—"It would certainly have been a pity had the contents of its pages not become accessible to the public. . . . Good teachers will find in the new volume interesting confirmation of many of their own independent ideas, whilst the less gifted will learn from the authoress how they may make their own class lessons more instructive, more intelligible, and more adapted to awaken the interest and the inventive faculty of the scholar."

Geometry for Beginners. An Easy Introduction to Geometry for Young Learners. By G. M. Minchin. Extra fcap. 8vo, limp cloth, 1s. 6d.

Arithmetic. With or without Answers. By R. Hargreaves. Crown 8vo, cloth, 4s. 6d.

The Mimes of Herodas. Edited, with Introduction, Critical Notes, Commentary, and Excursus, by J. Arbuthnot Nairn, M.A. Demy 8vo, cloth, with Facsimiles of the recently discovered Fragments and other Illustrations, 12s. 6d. net.

Plauti Comoediae. Vol. I. (*Oxford Classical Texts.*) Edited by W. M. Lindsay, M.A. Crown 8vo, paper covers, 5s.; limp cloth, 6s.

Horace—Vol. II. **The Satires, Epistles,** AND DE ARTE POETICA. With a Commentary by E. C. Wickham, D.D. Crown 8vo, cloth, with a Map, 6s.

Uniform in binding and price with the ODES, EPODES, AND CARMEN SECULARE previously published.

Educational Times.—"Scholarly, elaborate, and helpful; and the print and get-up are very tasteful and attractive."

Quintilian—Institutionis Oratoriae. LIBER X. A Revised Text. Edited, for the use of Colleges and Schools, by W. Peterson, C.M.G., LL.D. Second Edition. Extra fcap. 8vo, cloth, 3s. 6d.

Sources for Roman History, B.C. 133-70. By A. H. J. Greenidge, M.A., and A. M. Clay. Crown 8vo, cloth, 5s. 6d. net.

Tibullus and Propertius. Selections. With Introduction and Notes by George Gilbert Ramsay, M.A., LL.D., Litt.D. Third Edition, Revised. Extra fcap. 8vo, cloth, 6s.

An Elementary Greek Grammar. Containing Accidence and Elementary Syntax. By J. B. Allen. Crown 8vo, cloth, 2s. 6d.

A Book for the Beginner in Anglo- SAXON. By the late John Earle, M.A. Extra fcap. 8vo, limp cloth, 2s. 6d.

Gower—Selections from the Con- FESSIO AMANTIS. Edited by G. C. Macaulay, M.A. Extra fcap. 8vo, cloth, with Frontispiece, 4s. 6d.

Dryden—An Essay of Dramatic POESY. Edited, with Notes, by Thomas Arnold, M.A. Revised by William T. Arnold, M.A. Third Edition. Extra fcap. 8vo, cloth, 3s. 6d.

Shelley's Adonais. Edited, with Introduction and Notes, by William Michael Rossetti. Revised with the assistance of A. O. Prickard, M.A. Second Edition. Crown 8vo, cloth, 3s. 6d.; or 5s. in cloth extra.

Teachers' Guild Quarterly.—"The notes are very full, occupying 60 pages, and should prove valuable to those who want anything more than the poem itself."

Poems of English Country Life. Selected and Edited by H. B. George and W. H. Hadow. Crown 8vo, cloth, 2s.

Sir Thomas More's Utopia. Edited, with Introduction and Notes, by J. Churton Collins, M.A. Crown 8vo, cloth, 3s. 6d.

School History of England to Death of Victoria. With Maps, Plans, and select Bibliographies. By O. M. Edwards, R. S. Rait, and others. Crown 8vo, cloth, 3s. 6d.

Companion to English History (Middle Ages). Edited by Francis Pierrepont Barnard, M.A., F.S.A. Crown 8vo, cloth, with over 400 Illustrations, 8s. 6d. net.

The Student's Handbook to the UNIVERSITY AND COLLEGES OF OXFORD. Sixteenth Edition. Revised to September, 1903. Crown 8vo, 2s. 6d. net; by post, 2s. 9d. net.

History of French Versification, with numerous Examples from the Poets, by L. E. Kastner, M.A. Crown 8vo, cloth, gilt top, 5s. 6d. net.

Saturday Review.—"It will be strange if a moderately careful study of this by no means crabbed or too technical treatise does not open to the English reader a new world."

John Bull in France; or, French as it is Spoken. By Leon Delbos, M.A. Fcap. 8vo, cloth, or, on Oxford India paper, 2s. 6d.

Concise French Grammar, including Phonology, Accidence, and Syntax, for use in Upper and Middle Forms. By A. H. Wall. Crown 8vo, cloth, 4s. 6d.

French Primer, for use in Middle and Lower Forms. By the same. Extra fcap. 8vo, cloth, 2s.

Complete Catalogue post free on application.

From Ginn & Company's List.

An Illustrated School Geography.

By ANDREW J. HERBERTSON, F.R.S.E., F.R.G.S., AND ALEXIS FRYE.

Revised Edition, 1904. Large 4to. Price 5s.

An adaptation by Prof. HERBERTSON of FRYE'S "Complete Geography," for use in English Schools. Contains nearly 700 Illustrations and Diagrams, about 50 Outline and Photographic Relief Maps, and 16 pages of fully Coloured Maps.

First Studies of Plant Life. By G. F. ATKINSON, Ph.B. Brings the Life Processes of Plants within reach of the Child as living beings with needs like his own. Upwards of Three Hundred Illustrations. 2s. 6d.

The Sciences. By E. S. HOLDEN. Introduces the pupil into the domains of Astronomy, Chemistry, Physics, Geology, Physiography, and the like, and treats in a simple, vivid, and interesting manner of subjects about which every child is curious. Illustrated. 2s. 6d.

THE JANE ANDREWS BOOKS.

Illustrated. Price 2s. each.

Seven Little Sisters who live on the Round Ball that floats in the Air. Illustrates the Manners, Customs, and Child-life of the Seven Races of Mankind.

Each and All: the Seven Little Sisters prove their Sisterhood. This continues the story of the Seven Little Sisters.

Ten Boys who lived on the Road from Long Ago to Now. The World's History at Ten Stages, illustrated by the Life-story of as many Boys.

Stories Mother Nature told her Children. Dame Nature here tells how the Indian Corn grows; how the Frost Giants play; about the Amber, the Dragon-fly, Coral, Starfish, and other delightful Stories.

Stories of My Four Friends. The Four Friends are the four Seasons, and they weave into Stories the wonderful workings of Nature.

YOUTH'S COMPANION SERIES.

GEOGRAPHICAL READERS. Each 144 pages. Illustrated. Price 1s.

The Wide World. (Brief, Comprehensive Survey of Child-life in Japan, Egypt, Holland, France, Switzerland, Sweden, America, and Alaska.)

Northern Europe. (Descriptions and Stories of the Faroe Islands, Norway, Holland, Belgium, the Alps, the Moselle, &c.)

Under Sunny Skies. (Pictures of Life in Spain, Italy, Greece, Turkey, Asia Minor, and Northern Africa.)

Towards the Rising Sun. (Sketches of Life in Siam, Benares, Korea, Japan, and the East Indies.)

Strange Lands near Home. (U.S.A.) (Short Articles on the West Indies, Mexico, and the various Countries of South America.)

SCIENCE READER.

Triumphs of Science. Explanations and Descriptions of many of the Wonders of Modern Scientific Workmanship and Ingenuity. 141 pages. Illustrated. 1s. 6d.

DESCRIPTIVE LISTS POST FREE ON APPLICATION. BOOKS SENT ON APPROVAL TO TEACHERS.

CASEY'S EUCLID.

THE ELEMENTS OF EUCLID,

BOOKS I.—VI., AND PROPOSITIONS I.—XXI. OF BOOK XI.

Together with Appendix on the CYLINDER, SPHERE, CONE, &c., with Copious Annotations and Numerous Exercises.

By JOHN CASEY, LL.D., F.R.S., Fellow of the Royal University of Ireland, Vice-President, Royal Irish Academy, &c., &c.

Seventeenth Edition, price 4s. 6d., or in Two Parts, each Half-a-Crown.

A KEY TO THE EXERCISES

IN THE SIX BOOKS OF CASEY'S "ELEMENTS OF EUCLID."

By JOSEPH B. CASEY, Tutor, University College, Dublin.

Fourth Edition. Small 8vo, price 6s.

A SEQUEL

TO THE FIRST SIX BOOKS OF THE "ELEMENTS OF EUCLID."

PART I.

Sixth Edition, Revised and greatly Enlarged, price 3s. 6d., cloth.

A TREATISE ON THE

ANALYTICAL GEOMETRY

OF THE POINT, LINE, CIRCLE, AND THE CONIC SECTIONS,

Containing an account of its most recent Extensions, with numerous Examples.

Second Edition, Revised and Enlarged, 564 pp., price 12s.

A TREATISE ON

ELEMENTARY TRIGONOMETRY.

With numerous Examples and Questions for Examination.

Third Edition. Small 8vo, 148 pp., price 3s.

KEY TO THE EXERCISES

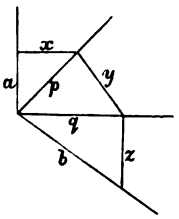
MATHEMATICS.

Propositions connected with Spirals.

By THEODORE W. HAY.

Theorem I.—If the angle between a and b be made up of three equal angles between the lines a, p, q, and b, and from any point in a a straight line x perpendicular to a be drawn to meet p, and from the point of intersection of p and x a straight line y perpendicular to p be drawn to meet q, and from the point of intersection of q and y a straight line z perpendicular to q be drawn to meet b, then



$$a^2/b^2 = x^3/z^3.$$

$$b^2 = q^2 + z^2 = z^2 + y^2 + p^2 = z^2 + y^2 + x^2 + a^2;$$

therefore $b^2 - a^2 = z^2 + y^2 + x^2$ .....(i.).

The triangles axp, pyq, qzb are similar; therefore $x/p = y/q$, *i.e.*, $x/y = p/q$ and also $y/z = p/q$; therefore $x/y = y/z$, and $y^2 = xz$.

Hence $b^2 - a^2 = z^2 + xz + x^2$ .....(ii.).

Now $x^2/a^2 = z^2/q^2 = z^2/(b^2 - z^2)$; therefore

$$a^2 = [x^2(b^2 - z^2)]/z^2 \quad \text{and} \quad b^2 - [x^2(b^2 - z^2)]/z^2 = x^2 + xz + z^2.$$

From this we get at once $b^2(z^2 - x^2) = z^3(x + z)$ or

$$b^2 = z^3/(z - x) \text{ .....(iii.).}$$

Also, from (ii.), $a^2 = b^2 - z^2 - xz - x^2$, *i.e.*,

$$a^2 = z^3/(z - x) - z^2 - xz - x^2 = x^3/(z - x) \text{ .....(iv.).}$$

Therefore, combining (iii.) and (iv.), $a^2/b^2 = x^3/z^3$.

Note.—The formula $a^2/b^2 = x^3/z^3$ holds good whatever angle a and x make; for $q = \sqrt[3]{(ab^2)}$ (being the second of two means between a and b); now $a/x = q/z = \sqrt[3]{(ab^2)}/z$; therefore $a/\sqrt{(ab^2)} = x/z$; therefore

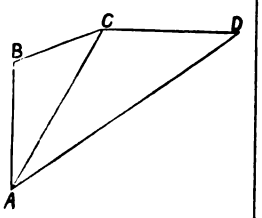
$$a^3/ab^2 = x^3/z^3 = a^2/b^2,$$

without reference to the angle between a and x.

Theorem II.—The formula $a^2/b^2 = x^3/z^3$ affords a proof of the following theorem: that the sum and difference of the parts of a line divided in extreme and mean ratio are as the cubes of the parts.

Lemma.—In the triangle ABC let

$$AC \cdot BC = AB^2.$$

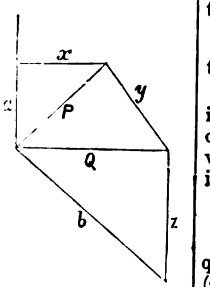


If from C a straight line CD be drawn making $\angle ACD = \angle B$, and CD be taken equal to AB, then the triangle formed by joining AD will be similar to the triangle ABC and $\angle CAD = \angle BAC$.

By hypothesis $AC \cdot CB = AB^2 = CD^2$; therefore $AC/CD = CD/CB = AB/CB$, also $\angle ACD = \angle B$; therefore the triangles ABC, ACD are similar, and, because $AC/CD = AB/BC$, therefore

$$\angle CAD = \angle BAC.$$

In the diagram let the angles between a and x, p and y, q and z be right angles, and let $a = y$; then



$$b^2 = z^2 + y^2 + x^2 + a^2 = z^2 + 2y^2 + x^2$$
$$= z^2 + 2xz + x^2;$$

therefore $b = x + z$ .....(1).

Again, $a^2 = y^2 = xz$; but $a^2 = x^3/(z - x)$ as shown above; therefore $xz = x^3/(z - x)$ or $z = x^2/(z - x)$. This evidently gives $xz = (z + x)(z - x)$. But, by (1), $b = x + z$; therefore $zx = b(z - x)$, or

$$z - x = xz/b = a^2/b \text{ .....(2).}$$

Now, since $z^2 - x^2 = xz$, therefore $(z + x)x = z^2$, *i.e.*, $(z + x)$ is a line cut in extreme and mean section, x and z being the parts, and $z > x$.

Combining (1) and (2), $(z + x)/(z - x) = b(a^2/b) = b^3/a^2 = z^3/x^3$.

[Rest in *Reprint*.]

15379. (Rev. Prebendary WHITWORTH, M.A.)—In how many different orders can the eight digits 3, 3, 3, 3, 7, 7, 7, 7 be arranged so as to express a number divisible by 37?

Solution by SOLIDUS.

As there are but 70 different numbers formed from the digits 7, 7, 7, 7, 3, 3, 3, 3 it would not take long to test each separately as to divisibility by 37. But the following analysis shortens the actual arithmetical work and shows that there are 18 such numbers divisible by 37, and no more. Since $7003 - 3007 = 3996 = 37 \times 108$, it follows that, if in any number we interchange a 3 and a 7 which are separated by two intervening digits, we do not alter the remainder of the number when divided by 37. Hence in a number consisting entirely of 7's and 3's the digits in the 1st, 4th, and 7th places may be permuted amongst one another without altering the divisibility by 37. Let us call these three places "the place-group I." Similarly the place-group II will consist of the 2nd, 5th, and 8th places, and place-group III of the 3rd and 6th places. All the possible numbers formed by 7, 7, 7, 7, 3, 3, 3, 3 might be classified as follows, according to the number of 7's in each place-group:—

I.....	3	3	2	2	2	1	1	1	0	0
II	1	0	2	1	0	3	2	1	3	2
III.....	0	1	0	1	2	0	1	2	1	2

Of these nine types of numbers it is easy by taking a specimen of each to verify that the only type divisible by 37 is that in which place-group I contains one 7, place-group II two 7's, and place-group III one 7, and that there are 18 permutations possible within the group. These are the numbers:—

33337777, 33377737, 73337737, 33737377, 33777337, 73737337,
37337773, 37373737, 77333737, 37733377, 37773337, 77733337,
37333777, 37377733, 77337733, 37737373, 37777333, 77737333.

15173. (Professor NEUBERG.)—Si tan α, tan β, tan γ sont les racines de l'équation $ax^3 + 3bx^2 + 3cx + d = 0$, former l'équation qui a pour racines tan α tan $(\beta + \gamma)$, tan β tan $(\gamma + \alpha)$, tan γ tan $(\alpha + \beta)$.

Solution by R. TUCKER, M.A., F. W. REEVES, B.A., *and* M. RAMPAL.

Proceeding in the usual way, we get

$y = \tan\alpha \tan(\beta + \gamma) = x[(-3b/a) - x]/(1 + d/ax) = -(ax^3 + 3bx^2)/(ax + d)$, *i.e.*, $y = (3cx + d)/(ax + d)$: hence x is linear in y, and the substitution $x = d(y - 1)/(3c - ay)$ gives the required equation in y.

15008. (D. BIDDLE.)—A hollow sphere of radius unity has concentric to it a smaller sphere of radius ρ. Find the greatest number of spheres that can be made to occupy the intervening space, each having internal contact with the one and external contact with the other original sphere.

Solution by J. P. HJORTH.

Imagining cones put with their tops at the centre of the original spheres, such that each of them is touching one of the added spheres, the number sought is equal to the number of circles of radius v which can be drawn on the surface of the sphere without cutting one another, where $\sin v = (1 - \rho)/(1 + \rho)$. Imagining the surface entirely covered with such circles, viz., when each is touching four others, and drawing the spherical tangents at the points of contact, the surface is divided into squares whose sides are equal to $2v$ and whose angles are $2x$, where

$$\tan x = \tan v/\sin v = (1 + \rho)/(2\sqrt{\rho});$$

the area of such a square is $t = \frac{1}{720}(8x - 360)4\pi$, and for the determination of n, the required number, we have $nt \leqslant 4\pi$, *i.e.*,

$$n(8x - 360) \leqslant 720, \quad n \leqslant 720/(8x - 360);$$

therefore the required number is the greatest integer in $720°/(8x - 360°)$.

[The Proposer observes that the above solution seems correct, except in making each added sphere be in contact with a restricted number of other similar ones, namely, four. This would be the case for a particular value of ρ only; as ρ approached unity, and the added spheres became infinitesimal, their centres would be arranged hexagonally.]

14735. (Professor MORLEY.)—Given five planes $a_1, \ldots, a_5$, and a quadric Q, let a quadric Q_n pass through the intersection of Q and a_n $(n = 1, \ldots, 5)$ and the four intersections of the four other planes. Then Q_n intersects Q in a second plane β_n, whose polar as to Q is a point a_n. Prove that the line a_1a_2 passes through the point (a_3, a_4, a_5); or, reciprocally, that the line a_1a_2 lies in the plane $a_3a_4a_5$. Also prove that, if one of the points a lies on Q, then all the points a lie on Q. Arrange the proof so as to hold for the analogous theorem in n dimensions. [The theorem in two dimensions that, given four lines and a conic C, and conics C_n being passed through the three intersections of three lines and the intersections of C and the fourth line, then, if one C_n touches C, all C_n's touch C, is M. Humbert's, *Comptes Rendus*, Vol. CXXIX.; and an elegant elementary proof is given by M. Bricard, *Nouv. Ann.*, Sér. 3, Vol. XIX., p. 369.]

Solution by A. M. NESBITT, M.A.

Take $Q \equiv (abcdfghpqr)(xyz\omega)^2 = 0$. Let the five planes $a_1, \ldots, a_5$ be $x = 0$, $y = 0$, $z = 0$, $\omega = 0$, and $Ax + By + Cz + D\omega = 0$; then

$$Q_5 \equiv Q - a_5L, \quad \text{where } L \equiv ax + \beta y + \gamma z + \delta\omega;$$

$$Q_4 \equiv Q - \omega L', \quad \text{where } L' \equiv \alpha' x + \ldots + \delta'\omega; \ldots.$$

Now Q_5 passes through $yz\omega$, $zx\omega$, $xy\omega$, and xyz; therefore $\alpha = a/A$,

Digitized by Google

$\beta = b/B$, .. ; therefore the condition that L should touch Q is

$$\begin{vmatrix} a & h & g & p & a/A \\ h & b & f & q & b/B \\ g & f & c & r & c/C \\ p & q & r & d & d/D \\ a/A & b/B & c/C & d/D & . \end{vmatrix} = 0,$$

which is therefore the condition that a_5, the pole of L, lies on Q.

Again, since Q_4 passes through xyz, we have $\delta' = d$, and, since it also passes through xya_5, we have

$$cz^2 + dw^2 + 2rzw = (\gamma' z + d\omega)\omega \quad \text{or} \quad cz + 2r\omega = \gamma'\omega.$$

But, at xya_5, $Cz + D\omega = 0$; whence $\gamma' = (2r/D - c/C)D$. Similarly

$$\beta' = (2q/D - b/B)D, \quad \alpha' = (2p/D - a/A)D;$$

therefore $L'/D \equiv (2p/D - a/A)x + (2q/D - b/B)y + (2r/D - c/C)z + d/D\,\omega$, and the condition that a_4, the pole of L', lies on Q is

$$\begin{vmatrix} a & h & g & p & 2p/D - a/A \\ h & b & f & q & 2q/D - b/B \\ g & f & c & r & 2r/D - c/C \\ p & q & r & d & d/D \\ 2p/D - a/A & 2q/D - b/B & 2r/D - c/C & d/D & \end{vmatrix} = 0.$$

But this condition is equivalent to the former one, since, by multiplying the fourth column of the former by 2/D, and subtracting the fifth column, for a new fifth column that determinant has the first four rows identical with those above, and the fifth row is

$$a/A \quad b/B \quad c/C \quad d/D \quad 2d/D^2.$$

Now, making a new fifth row by subtracting this fifth row from 2/D times the fourth row, we see that the conditions are absolutely identical.

Again, if the co-ordinates of a_4 be $(x_4, y_4, z_4, \omega_4)$, of a_5 be $(x_5, \ldots)$, the conditions that a_4a_5 passes through $a_1a_2a_3$, *i.e.*, through $x = y = z = 0$, are

$$\begin{Vmatrix} 0 & 0 & 0 & 1 \\ x_4 & y_4 & z_4 & \omega_4 \\ x_5 & y_5 & z_5 & \omega_5 \end{Vmatrix} = 0, \quad i.e., \text{ that } y_4z_5 = y_5z_4, \; z_4x_5 = z_5x_4.$$

But, if a_4 be the pole of $L' = 0$, *i.e.*, of

$$(2p/D - a/A)x + (2q/D - b/B)y + (2r/D - c/C)z + d/D\,\omega = 0,$$

and (A), (B), (C), (D), F, G, H, P, Q, R denote the minors of $a, b, c, d, f, g, h, p, q, r$ in Δ, we have

$$\Delta y_4 = K[H\alpha' + (B)\beta' + F\gamma' + Q\delta'], \quad \Delta z_4 = K[G\alpha' + F\beta' + (C)\gamma' + R\delta'],$$
$$\Delta x_4 = K[(A)\alpha' + H\beta' + G\gamma' + P\delta'],$$

where $\alpha', \beta', \gamma', \delta'$ have the values given above, *i.e.*, that

$$x_4 : y_4 : z_4 = \begin{vmatrix} \alpha' & \beta' & \gamma' & \delta' \\ h & b & f & q \\ g & f & c & r \\ p & q & r & d \end{vmatrix} : \begin{vmatrix} a & h & g & p \\ \alpha' & \beta' & \gamma' & \delta' \\ g & f & c & r \\ p & q & r & d \end{vmatrix} . \begin{vmatrix} a & h & g & p \\ h & b & f & q \\ \alpha' & \beta' & \gamma' & \delta' \\ p & q & r & d \end{vmatrix} .$$

Similarly $x_5 : y_5 : z_5 =$ similar determinants with $\alpha, \beta, \gamma, \delta$ in place of $\alpha', \beta', \gamma', \delta'$. Thus, rejecting common factors, we get

$$y_4z_5 = \begin{vmatrix} a & h & g & p \\ h & b & f & q \\ a/A & b/B & c/C & d/D \\ p & q & r & d \end{vmatrix} \cdot \begin{vmatrix} a & h & g & p \\ 2p/D - a/A & 2q/D - b/B & 2r/D - c/C & d/D \\ g & f & c & r \\ p & q & r & d \end{vmatrix}.$$

In the first of these factors build up a new third row by subtracting the third row from 2/D times the fourth; this gives

$$(2p/D - a/A)(2q/D - b/B)(2r/D - c/C)\,d/D,$$

and in the second factor build up a new second row by subtracting the second row from 2/D times the fourth row; this gives

$$a/A \quad b/B \quad c/C \quad d/D.$$

Hence $y_4z_5 = y_5z_4$, and, similarly, $z_4x_5 = z_5x_4$; therefore a_4a_5 passes through $a_1a_2a_3$. The reciprocal proposition may be proved in a precisely similar way. [Rest in *Reprint*.]

15470. (Salutation.)—The sines of two angles are expressible in proper fractions the denominators of which differ by unity; and their cosines are inversely proportional to the respective denominators. The latter being given, find the several numerators.

Solution by W. Scrimgeour, M.A., B.Sc.

Let $\angle MOP = A$, $\angle MOQ = B$,

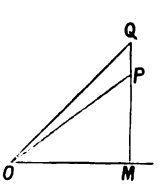
$OP = a$, $OQ = a+1$, $MP = x$, $MQ = y$.

Then $\sin A = x/a$, $\sin B = y/(a+1)$,

$\cos A = OM/a$, $\cos B = OM/(a+1)$.

Hence the last condition is satisfied, the cosines being inversely proportional to the denominators.

$$OM^2 = a^2 - x^2 = (a+1)^2 - y^2;$$



therefore $y^2 - x^2 = 2a + 1$. Let b, c be the factors of $2a+1$; therefore $(y+x)(y-x) = bc$. Let $y+x = b$, $y-x = c$; therefore $y = \frac{1}{2}(b+c)$, $x = \frac{1}{2}(b-c)$. Since $2a+1$ is odd, b and c are both odd; therefore x and y are integral. Give b, c all possible simultaneous values, and all the solutions should be obtained. Thus, if $a = 7$, $2a+1 = 15 = 3(5)$; therefore $y = 4$, $x = 1$; therefore $\sin A = \frac{1}{7}$, $\sin B = \frac{4}{5}$; $\cos A = \frac{1}{7}\sqrt{(48)}$, $\cos B = \frac{1}{5}\sqrt{(48)}$. This value of a also gives $y = 8$, $x = 7$.

[There is always the solution $x = a$, $y = a+1$, which gives

$$\cos A = \cos B = 0.]$$

$a = 22$ gives two other solutions, $x = 6$, $y = 9$; $x = 2$, $y = 7$.

Note.—There is possibly a general expression giving the *number* of values for x and y corresponding to a given value of a.

14821. (Professor Cochez.)—Construire un triangle connaissant la hauteur et la bissectrice de l'angle A ainsi que la somme $b + c = m$.

Solution by C. E. Youngman, M.A.

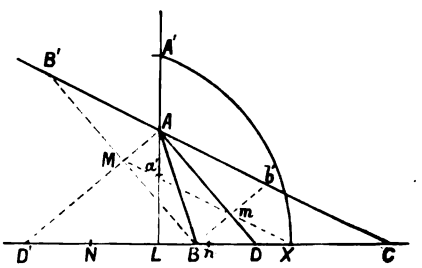
Let ABC be the required triangle, with CA produced till $AB' = AB$; AL the altitude; AD, AD' the bisectors of the angle A; and M, N, X the mid-points of BB', LD', and BC. Then

$$XM^2 = XL \cdot XD';$$

for

$$\angle XML = \angle XMB + \angle BML = \tfrac{1}{2}\angle A + \angle BAL = \angle DAL = \angle LD'M,$$

and XM touches the circle LD'M.



Now the triangle ALD is given; therefore also AD' and N; and to find X we need only take LA' along LA of the given length $XM = \frac{1}{2}(b+c)$, and then $NX = NA'$; and M, B, C follow in that order.

If $b - c$ were given instead of $b + c$, the same construction would do, modified as shown by the small letters. The problem is, in effect: To draw across an angle DD'B' (or D'Db') through a point A on its bisector, a line CB' (or Cb') of given length.

15359. (Robt. W. D. Christie.)—Without the use of the method of continued fractions, solve the equation $X^2 - 149Y^2 = 1$, and generalize your method.

Solutions (I.) *by* Lt.-Col. Allan Cunningham, R.E.; (II.) *by* R. F. Davis, M.A.; (III.) *by* A. H. Bell.

(I.) Since $13^2 - 149 \cdot 1^2 = +20$ and $12^2 - 149 \cdot 1^2 = -5$, therefore

$$-4 = (13^2 - 149 \cdot 1^2)/(12^2 - 149 \cdot 1^2) = t_1^2 - 149 \cdot u_1^2, \text{ suppose.}$$

The values of t_1, u_1 may be found by the method of conformal division (see Col. Cunningham's paper "On the Connexion of Quadratic Forms" in *Proc. Lond. Math. Soc.*, Vol. xxviii., 1896, p. 289), whence

$$t_1 = \tfrac{1}{2}(13 \cdot 12 + 149 \cdot 1 \cdot 1) = 61, \quad u_1 = \tfrac{1}{2}(13 \cdot 1 + 12 \cdot 1) = 5.$$

Thus $61^2 - 149 \cdot 5^2 = -4$. Now square this; then

$$(61^2 + 149 \cdot 5^2)^2 - 149(2 \cdot 61 \cdot 5)^2 = 7446^2 - 149 \cdot 610^2 = +16,$$

giving

$$3723^2 - 149 \cdot 305^2 = +4.$$

Hence $-1 = (3723^2 - 149 \cdot 305^2)/(61^2 - 149 \cdot 5^2) = t_2^2 - 149 \cdot u_2^2$ suppose; and, by conformal division,

$$t_2 = \tfrac{1}{4}(61 \cdot 3723 + 149 \cdot 5 \cdot 305) = 113582,$$
$$u_2 = \tfrac{1}{4}(61 \cdot 305 + 5 \cdot 3723) = 9305;$$

therefore $113582^2 - 149 \cdot 305^2 = -1$. Now square this; then

$$(113582^2 + 149 \cdot 305^2)^2 - 149(2 \cdot 305 \cdot 113582)^2 = +1,$$

or

$$25801741449^2 - 149 \cdot 2113761020^2 = +1.$$

To generalize the above, *i.e.*, to find $X^2 - D \cdot Y^2 = +1$ (D being given), compute the quantities $x_1^2 - D \cdot y_1^2 = a_1$, $x_2^2 - D \cdot y_2^2 = a_2$, ... for any chosen values of (x_1, y_1), (x_2, y_2), ..., until two results a_m, a_n are obtained such that $a_n = k \cdot a_m$. Then (in some cases not easily specified) the value of $k = a_n/a_m$ can be obtained in the form $t_1^2 - D \cdot u_1^2 = k$, by conformal division.

By further trials, another partition of k may certainly be found, say, $\pm k = t_1'^2 - Du_1'^2$. When this is found the partition $X'^2 - D \cdot Y'^2 = \pm 1$ can always be found by conformal division; and, if the result is -1 (*i.e.*, if the values of k above be of opposite sign), then $X = X'^2 + D \cdot Y'^2$, $Y = 2X'Y'$ will satisfy $X^2 - DY^2 = +1$.

(II.) If $x = \alpha$, $y = \beta$ satisfy the equation $x^2 - Ny^2 = -1$, it may easily be shown that $x = 2N\beta^2 - 1$, $y = 2\alpha\beta$ satisfy the equation $x^2 - Ny^2 = +1$. For instance, $x = 18$, $y = 5$ satisfy the equation $x^2 - 13y^2 = -1$; therefore $x = 649$, $y = 180$ must satisfy the equation $x^2 - 13y^2 = 1$. Let us

Digitized by Google

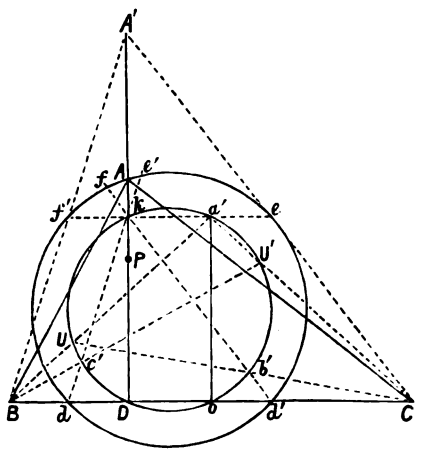
endeavour to solve $x^2-149y^2=-1$ as a preliminary step to solving the equation $x^2-149y^2=1$.

$$149y^2=1+x^2=(5u-10v)^2+(10u+7v)=149(u^2+v^2).$$

Hence we require to make $7u-10v=1$ and $u^2+v^2=y^2$. The first condition is satisfied by taking $u=10t+3$, $v=7t+2$; and the second condition gives $(10t+3)^2+(7t+2)^2=\square$, whence $t=762$ (by the help of $t=-\frac{1}{3}$, for which $10t+3:7t+2=4:3$). Thus $u=7623$, $v=5336$; and $x=113,582$, $y=9,305$ satisfy the equation $x^2-149y^2=-1$. Therefore $x=2.149.9,305^2-1$ and $y=2.113,582.9,305$ will satisfy the equation $x^2-149y^2=1$. [For rest *v.* next issue.]

14862. (John Griffiths, M.A.)—If D be the foot of the perpendicular from the vertex A upon the base BC of a triangle ABC, whose orthocentre is P, and DA be produced to A′ so that AA′ = DP, prove that the nine-point circle of ABC is a G.B. circle (generalized Brocard circle) of A′BC.

Solution by C. E. Youngman, M.A.



Let o, k be the mid-points of BC and DA′; then k is also mid-point of AP, and ok is a diameter of the circle. Find d, d', e, f', the mid-points of BD, DC, CA′, A′B; then $f'ke$ is parallel to BC, and kd, kd' are parallel to A′B, A′C or to oe, of'. Also $f'd$ and $d'e$ are both perpendicular to BC; therefore d, d', e, f lie on a circle. This circle is concentric with the other, since the diameters de and ok bisect each other. Let e', f be the points at which it cuts kd, kd' again.

Project o upon ke, kf, kd into the points a', b', c'; these will be vertices of a triangle inversely similar to A′BC, inscribed in the circle ok; and we have $a'e=f'k=Bd$, $b'f=d'k=Ce$; hence Ba' and Cb' are parallel to de and ef. Let them meet at U; then $\angle b'Ua'=\angle def=\angle dd'f=\angle BCA'=\angle b'c'a'$; therefore U lies on the circle ok, and also on the circle through BC touching CA′. Similarly, Bc' and Ca' meet at U′, lying on the circle ok and the circle through BC touching BA′. Hence

$$\angle UCA'=\angle UBC=\angle U'CB=\angle U'BA'=\omega'=90°-\angle Ua'o$$
$$=90°-\angle Uko=\angle Uok=\angle U'ok.$$

Therefore U, U′ are an isogonal pair in A′BC, and possess properties analogous to those of its Brocard points. We have also

$$\cot\omega'=Bo/oa'=BC/DA'=\cot A'BC+\cot A'CB.$$

Since parallels through d, e, f to A′B, BC, CA′ meet at k, parallels through C, A′, B to ef, fd, de must also meet; therefore A′U is parallel to fd; therefore CUA′ is a right angle; and similarly with A′U′B.

4991. (G. A. Ogilvie.)—Show (1) that there is only one point the polars of which with respect to four conics form a parallelogram, and (2) find the area of the parallelogram for any four conics.

Note on the above Question by R. F. Whitehead, B.A.

Suppose the polars of a point P with regard to two conics centres C_1, C_2 to be parallel, meeting in a point Q at infinity. Since C_1P, C_2P are the polars of Q, (1, 1) relations connect the lines C_1P, C_2P with Q, which traverses the line infinity, and therefore a (1, 1) relation connects them with each other. Hence P describes a conic through C_1C_2; obviously the conic will circumscribe the self-polar triangle. Hence, if we take the conics in pairs S_1, S_2 and S_3, S_4, there will be *four* points, the intersections of two such conics, whose polars form a parallelogram. Altogether there will be *twelve* such points.

15074. (Professor Neuberg.)—Construire le centre et les asymptotes de l'hyperbole équilatère qui passe par deux points donnés A, B et qui touche une droite donnée d en un point donné C.

Solution by Professor Sanjána, M.A., *and* F. W. Reeves, B.A.

Since three points A, B, C on the curve are given, a fourth point, viz., the orthocentre O of the triangle ABC, is known to lie on it. The problem therefore reduces to the description of a conic passing through A, B, C, O, and touching d; this is easily effected. (See Besant's *Geometrical Conics*, § 250.)

QUESTIONS FOR SOLUTION.

15534. (Hon. G. R. Dick.)—If Δ denotes the operator of the calculus of finite differences and $E=1+\Delta$, prove that

$$(x\Delta^2E^{-1})^n=\Delta^{n-1}(xE^{-1})^n\Delta^{n+1}.$$

15535. (Rev. F. H. Jackson.)—If $(x)_n=x(x-1)(x-2)\ldots(x-n+1)$, find a product expression for the series

$$(x)_n(y)_n-n(x)_{n-1}(y)_{n-1}(x)_1(y)_1+\{n[(n-1)]/2!\}(x)_{n-2}(y)_{n-2}(x)_2(y)_2-\ldots,$$

a curious analogy of Vandermonde's theorem. The series

$$F(a.a-\delta+1.a-\epsilon+1.\delta-\epsilon-1)$$

summed by Prof. A. C. Dixon can be transformed into the above for all values of n.

15536. (*Communicated by* J. L. S. Hatton.)—Evaluate the determinant

$$\begin{vmatrix} a & b & c & d & e & f & g & h \\ h & a & b & c & d & e & f & g \\ g & h & a & b & c & d & e & f \\ f & g & h & a & b & c & d & e \\ h & g & f & e & d & c & b & a \\ a & h & g & f & e & d & & \\ b & a & h & g & & e & d & c \\ c & b & a & h & g & f & e & d \end{vmatrix}.$$

15537. (*Communicated by* H. J. Woodall, A.R.C.S.)—Interpret $x^{\sqrt{2}}$.

15538. (W. H. Blythe, M.A.)—There are N bullets in a bag to be divided among n people. The first takes what he considers to be his share, finding one remainder which he lays aside. The second, not knowing the first has removed any of the bullets, does exactly the same thing, and each of the people in turn repeats the process. Finally, the remaining bullets are divided into n equal portions, with one remainder, each person taking his share. Show that N is of the form An^p-n+1, where A is any positive integer, and p is not less than $n+1$. Find an expression for the share of each person.

15539. (Lt.-Col. Allan Cunningham, R.E.)—For what forms of m is $X^3\pm1\equiv0\pmod m$? Show how to find X when m is given. Ex.—$m=99991$.

15540. (Robt. W. D. Christie.)—Solve the equation in positive integers

$$[\tfrac{1}{2}(p+e-f)][\tfrac{1}{2}(p+f-e)]-p[\tfrac{1}{2}(p-e-f)]=1,$$

when p is any prime whatever of form $4m+1$. Will it be true also for n?

15541. (Rev. T. Roach, M.A.)—Sum the series

$$(1)\quad \frac{1}{1.2}-\frac{1}{5.6}+\frac{1}{9.10}-\ldots, \qquad (2)\quad \frac{1}{2}-\frac{2}{5}+\frac{3}{8}-\frac{4}{11}+\ldots.$$

15542. (D. Biddle.)—A triangle is inscribed in a circle of given radius, and has its centroid at a given distance from the centre. (1) Define the limits of area of inscribed triangles whose centroids are thus placed; and (2), given any area within those limits, inscribe a second triangle having this area, and whose centroid occupies the same position as that of the former or one equidistant from the centre of the circle.

15543. (Professor S. Sircom.)—If D, E, F be any points on the sides BC, CA, AB respectively of a triangle ABC, and X, Y, Z the points in which EF, FD, DE respectively meet the same sides, then

$$(DZ.EX.FY)/(DY.EZ.FX)=-(AF.BD.CE)/(AE.BF.CD).$$

15544. (Professor Lauvernay.)—Démontrer qu'il existe un triangle, et un seul, tel que la circonférence inscrite a ce triangle passe par son orthocentre et son centre de gravité.

15545. (Professor Cochez.)—Étudier la courbe

$$3x^2y-3y(2a-y)x+y^3-3ay^2+3a^3=0.$$

15546. (Professor Nanson.)—Find the locus of the foci of a conic touching four given lines, and deduce the locus of the focus of a parabola touching three given lines.

15547. (Professor Sanjána, M.A.)—A central conic, whose minor axis is of given length, touches two fixed straight lines; if one focus moves on a given straight line, prove that the other moves on a hyperbola having its asymptotes parallel to the fixed lines.

15548. (Professor Neuberg.)—Soient P, Q deux points d'une parabole symétriques par rapport à l'axe de cette courbe. La perpendiculaire élevée en un point quelconque M de la parabole sur la corde PM rencontre le diamètre passant par Q en un point N. Démontrer que la projection de MN sur le diamètre QN est constante.

15549. (A. M. Nesbitt, M.A.)—CP, CQ are conjugate semi-diameters of an ellipse. If the triangle CPQ be of constant area, prove that the envelope of PQ is a similar ellipse.

15550. (H. Bateman, B.A.)—Prove that, if a prism whose cross-section is a regular polygon be of the right density, it can float in water with one generator and the middle point of a side in the surface.

Digitized by Google

15551. (Professor Langhorne Orchard, M.A., B.Sc.)—Show *from first principles* that the freezing-point of water is lowered by increase of pressure.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

9811. If masses P, Q, and R be placed at the vertices A, B, and C respectively of the triangle of reference, show that the trilinear equations to the principal axes at the centre of gravity of the masses will be

$$lx + my + nz = 0 \quad \text{and} \quad l'x + m'y + n'z = 0,$$

where $l : m : n$ and $l' : m' : n'$ are determined by the equations

$$P(l/a) + Q(m/b) + R(n/c) = 0, \quad P(l'/a) + Q(m'/b) + R(n'/c) = 0,$$

$$P(ll'/a^2) + Q(mm'/b^2) + R(nn'/c^2) = 0,$$

and

$$ll' + mm' + nn' - (mn' + m'n)\cos A - (nl' + n'l)\cos B - (lm' + l'm)\cos C = 0,$$

and that at any point the principal axes are conjugate (*i.e.*, each passes through the pole of the other) with respect to the conics

$$Pl^2/a^2 + Qm^2/b^2 + Rn^2/c^2 = 0$$

and

$$l^2 + m^2 + n^2 - 2mn\cos A - 2nl\cos B - 2lm\cos C = 0$$

(the circular points at infinity).

9862. (Capitaine De Rocquigny.)—Les n premiers nombres entiers sont dans une urne. On en tire au hasard trois. Quelle est la probabilité que l'un de ces nombres est égal à la somme des deux autres ou égal à leur demi-sommet ?

9870. (R. Tucker, M.A.)—O, Ω, Ω' are the in-centre and Brocard points of a triangle ABC. Ω_1, Ω_1'; Ω_2, Ω_2'; Ω_3, Ω_3' are the images of Ω, Ω' with respect to AO, BO, CO. Prove that, if ρ_1, ρ_2 are the radii of the circles round Ω, Ω_1, Ω_2, Ω_3; Ω', Ω_1', Ω_2', Ω_3' respectively, and if $\lambda^2 \equiv a^2b^2 + b^2c^2 + c^2a^2$, then

$$\rho_1^2 \sim \rho_2^2 = [abc\,\Pi(a-b)]/\lambda^2, \quad \rho_1^2 + \rho_2^2 = abc\,[\Sigma a\,\Sigma a^3 - (\Sigma a^2)^2]/(2s\lambda^2).$$

The equations to the two circles in trilinear co-ordinates are easily obtained from the fact that they are concentric with the in-circle of ABC.

9935. (Professor Schoute.)—To show that the diameters of a general quadratic complex (Plücker, *Neue Geometrie des Raumes*, p. 228) form a congruency (2, 1).

10261. (Professor Dépiez.)—On décrit des coniques semblables entre elles, ayant même centre O et passant par un même point P. Démontrer que (1) les sommets et les foyers de ces courbes décrivent des podaires de coniques; (2) le centre du cercle osculateur en P décrit une quartique; (3) les directrices enveloppent une conique.

10772. (G. H. Bryan, M.A.)—A liquid film is supported on a framework in the form of an equilateral triangle of side a. If the difference of pressures (p) on the two sides of the film is so small that the surface of the film is nearly plane, prove that its equation may be written $z = \frac{2}{3}a^2(p/T)\xi\eta\zeta$, where z is the perpendicular distance of any point from the plane of the triangle, ξ, η, ζ the *areal* co-ordinates of the foot of this perpendicular, and T the surface tension.

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss Constance I. Marks, B.A., 10 Matheson Rd., West Kensington, W.

Vol. IV. (New Series) of the "Mathematical Reprint," is now ready, and may be had of the Publisher, Francis Hodgson, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, March 10th, 1904.—Dr. E. W. Hobson, Vice-President, and, temporarily, Prof. Elliott, Vice-President, in the Chair.

Mr. S. T. Shovelton was elected a member.

The following papers were communicated:—

"On Inner Limiting Sets of Points in a Linear Interval": Dr. E. W. Hobson.

"Illustrations of Modes of Decay of Vibratory Motions": Prof. A. E. H. Love.

"The Unique Expression of a Quantic of any Order in any Number of Variables with an Application to Binary Perpetuants": Mr. P. W. Wood.

"The Derivation of Generalized Bessel Coefficients from a Function analogous to the Exponential": Rev. F. H. Jackson.

"Transformation of Generalized Legendre Functions": Rev. F. H. Jackson.

"Singularities of Functions determined by Taylor's Series": Mr. H. M. Macdonald.

Mr. Edward Arnold's List.

PATRIOTIC SONG. A Book of English Verse.

Being an Anthology of the Patriotic Poetry of the British Empire from the Defeat of the Spanish Armada until the Death of Queen Victoria. Selected and Arranged by ARTHUR STANLEY. xxvii + 363 pages. Crown 8vo, 2s. 6d.

3/6 AN ARITHMETIC FOR SCHOOLS. 3/6

By J. P. KIRKMAN, M.A., and A. E. FIELD, M.A., Assistant Masters at Bedford Grammar School.

An entirely new Text-Book based upon the most recent methods of instruction. The volume contains an Appendix on some of the possibilities of Squared Paper, a knowledge of which is required by some Civil Service Examiners. Crown 8vo, 500 pages. With or without Answers. Cloth, 3s. 6d.

"An excellent school arithmetic on a good plan well carried out. In addition to its value as a text-book, the work is attractive from the quantity of instructive general information it contains. This is so simply and directly given that a student can scarcely fail to be thoroughly interested and vividly impressed. The theory of the elementary rules is exceptionally clear and convincing."—*Educational Times.*

ARNOLD'S LITERARY READING BOOKS.

THE GREENWOOD TREE. A Book of Nature Myths and Verses for Upper Standards. 224 pages. Crown 8vo, 1s. 3d.

"It is really a charming collection of admirably edited matter circling round natural objects and phenomena, with a liberal sprinkling of old-world stories. It would be invidious to single out special extracts where all is of all-round excellence."—*School World.*

IN GOLDEN REALMS. An English Reading Book for Junior Forms. 224 pages. Cloth, 1s. 3d.

Designed to form an introduction to the study of English Literature. Containing folk-tales from various sources, stories from Homer, Virgil, the Beowulf poem, Chaucer, Malory, Froissart, Spenser, Shakespeare, Barbour, Scott, Lamb, and Washington Irving, and a large number of extracts from the works of the best poets.

Illustrated with beautiful black-and-white reproductions of famous Paintings in the Wallace, Tate, and National Galleries.

IN THE WORLD OF BOOKS. An English Reading Book for Middle Forms. 256 pages. Cloth, 1s. 6d.

Designed to introduce the pupil to some of the greatest names in English Literature. Containing interesting extracts, generally narrative, from the leading writers of prose and poetry from Cædmon and Bede to Thackeray and Tennyson, arranged in chronological order. Illustrated in a manner similar to the above.

SHILLING HANDBOOKS.

A FIRST COURSE IN ENGLISH LITERATURE. By RICHARD WILSON, B.A. 144 pages. Crown 8vo, 1s.

A FIRST COURSE IN ENGLISH ANALYSIS AND GRAMMAR. By RICHARD WILSON, B.A., Author of "Arnold's Language Lessons." 144 pages. Crown 8vo, 1s.

ARNOLD'S NEW SHILLING GEOGRAPHY. The World, with special reference to the British Empire. With Diagrams, Sketch Maps, and Statistical Tables. Suitable for Junior and Lower Middle Forms in Secondary Schools. 160 pages. Crown 8vo, cloth, 1s.

PHYSIOLOGY FOR BEGINNERS. By LEONARD HILL, M.B., F.R.S. 124 pages. Cloth, 1s. With a large number of new and clear Diagrams.

THE NEW ZEALAND COLONY. Its Geography and History. With Illustrations and a Coloured Map. Cloth, 1s.

THE AUSTRALIAN COMMONWEALTH. Its Geography and History. A Reading Book for Schools. 144 pages. With Illustrations and Coloured Map. Cloth, 1s.

This book has been written by an Australian, and the illustrations consist of reproductions from photographs and from drawings made by an artist who has spent many years in Australia.

A HISTORY OF ENGLAND.

By C. W. OMAN, M.A., Fellow of All Souls' College, Oxford. Fully furnished with Maps, Plans of the principal Battlefields, and Genealogical Tables. 760 pages. Ninth and Enlarged Edition (to end of South African War). Crown 8vo, cloth, 5s.

Special Editions, each volume containing a separate index.

In Two Parts, 3s. each: Part I., from the Earliest Times to 1603; Part II., from 1603 to 1902.

In Three Divisions: Division I., to 1307, 2s.; Division II., 1307 to 1688, 2s.; Division III., 1688 to 1902, 2s. 6d.

A Complete Educational Catalogue will be forwarded post free on application.

LONDON: EDWARD ARNOLD, 37 BEDFORD STREET, STRAND.

King's Scholarship.

Students entering for the Examination for the above Scholarship

SHOULD BE SURE TO GET

Chapman & Hall's Student's Edition

OF

DAVID COPPERFIELD.

BY CHARLES DICKENS.

With Frontispiece. Crown 8vo. 1s. net.

In addition to containing the authoritative Text as revised and corrected by the Author in 1867, it comprises the following Special Features prepared for the purposes of the Examination:—

1. **A Biographical Introduction, which also gives a short account of the writing of the book.**
2. **A List of Characters in the Story, with full description of each, and the part each plays in the narrative.**
3. **A Synopsis of the principal Incidents and Scenes.**
4. **Notes.**

MACMILLAN & CO.'S LIST.

THE MAKING OF ENGLISH.

By HENRY BRADLEY, Hon. M.A. Oxon., Hon. Ph.D. Heidelberg, sometime President of the Philological Society. Globe 8vo, 4s. 6d.

New Works on Geometry to meet the New Requirements.

A SCHOOL GEOMETRY.

By H. S. HALL, M.A., and F. H. STEVENS, M.A. Crown 8vo.

PARTS I. and II.—PART I. Lines and Angles, Rectilineal Figures. PART II. Areas of Rectilineal Figures (containing the substance of Euclid, Book I.). 1s. 6d.

PART III.—Circles (containing the substance of Euclid, Book III., 1-34, and Part of Book IV.). 1s.

PARTS I., II., and III. 2s. 6d.

PART IV.—Squares and Rectangles, Geometrical Equivalents of certain Algebraical Formulæ (containing the substance of Euclid, Book II. and Book III., Props. 35-37). Sewed, 6d.

PARTS I.-IV. 3s.

PARTS III. and IV.—Containing the Substance of Euclid, Books II. and III. and Part of Book IV. 1s. 6d.

PART V.—Containing the substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d.

PARTS I.-V.—4s. 6d.

PARTS IV. and V.—Containing the substance of Euclid, Book II., Book III., 35-37, and Book VI. 2s.

PART VI.—Containing the substance of Euclid, Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures. [*In the press.*

*** This Work is based upon the recommendations of the Mathematical Association.

ROYAL COLLEGE OF SCIENCE MAGAZINE.—"The book certainly maintains the high reputation of the authors' mathematical works, and we feel sure even the upholders of Euclid will welcome this rival."

A NEW GEOMETRY FOR SCHOOLS.

By S. BARNARD, M.A., Assistant Master at Rugby School, late Fellow and Lecturer at Emmanuel College, Cambridge, and J. M. CHILD, B.A. (Cantab.), Lecturer in Mathematics, Technical College, Derby. Crown 8vo, 4s. 6d.

GUARDIAN.—"The book should receive a very wide—we may almost hope a universal—circulation."

A NEW GEOMETRY FOR JUNIOR FORMS.

By **S. BARNARD, M.A., and J. M. CHILD, B.A. (Cantab.).** Crown 8vo, 2s. 6d.

*** This Volume contains all the Practical and Theoretical Geometry required for a Pass by Junior Candidates in the University Locals.

NATURE.—"The work is simple, very thorough, and in every way suited to the requirements of junior students."

THEORETICAL GEOMETRY FOR BEGINNERS.

By C. H. ALLCOCK, Senior Mathematical Master at Eton. PARTS I., II., and III., Globe 8vo, 1s. 6d. each. PART IV. [*In the press.*]

NATURE.—"For those who do not wish to be tied to Euclid's sequence, and yet who desire to retain a strictly deductive system, the book will be found eminently suited. It is well written and beautifully printed."

PRACTICAL EXERCISES IN GEOMETRY.

By W. D. EGGAR, M.A., Assistant Master at Eton College. Globe 8vo, 2s. 6d.

TEACHER.—"As an introduction to the study of theoretical geometry, while also affording a training in itself, nothing could be better. The scheme of the book is excellent, and it is well carried out."

EIGHTH EDITION, Revised. WITH A CHAPTER ON GRAPHS.

ELEMENTARY ALGEBRA FOR SCHOOLS.

By H. S. HALL, M.A., and S. R. KNIGHT, B.A. Globe 8vo, 3s. 6d. With Answers, 4s. 6d. Answers, 1s. KEY, for Teachers only, 8s. 6d.

CLASSICAL LIBRARY. NEW VOL.

THE HOMERIC HYMNS. Edited, with Preface, Apparatus Criticus, Notes, and Appendices, by T. W. ALLEN, M.A., Fellow of Queen's College, Oxford, and E. E. SIKES, M.A., Fellow of St. John's College, Cambridge. 8vo, 10s. 6d. net.

NEW IMPRESSION NOW READY.

THE HISTORY OF HERODOTUS. Translated into English by G. C. MACAULAY, M.A., formerly Fellow of Trinity College, Cambridge. In 2 vols. New Impression. Crown 8vo, 18s.

NEW IMPRESSION NOW READY.

AN ELEMENTARY TREATISE ON CONIC SECTIONS AND ALGEBRAIC GEOMETRY, with numerous Examples and Hints for their Solution, especially designed for the use of Beginners. By G. HALE PUCKLE, M.A., St. John's College, Cambridge. New Impression. Crown 8vo, 7s. 6d.

Guardian.—"As an elementary treatise the work is now brought into line with the best modern expressions of the subject."

A MODERN SCHOOL. By PAUL H. HANUS, Professor of he History and Art of Teaching in Harvard University. Crown 8vo, 5s. net.

THIRD EDITION NOW READY.

ELEMENTS OF MARINE SURVEYING FOR THE USE OF JUNIOR NAVAL OFFICERS. With numerous Exercises. By the Rev. J. L. ROBINSON, M.A., late Chaplain and Naval Instructor, Royal Naval College, Greenwich. Third Edition, Revised and Enlarged. Crown 8vo, 7s. 6d.

NEW IMPRESSION JUST READY.

PIONEERS OF SCIENCE. By Sir OLIVER LODGE, F.R.S., Principal of the Birmingham University. With Portraits and other Illustrations. New Impression. Extra crown 8vo, gilt edges, 6s.

ELEMENTS OF INORGANIC CHEMISTRY. By HARRY C. JONES, Associate Professor of Physical Chemistry in the Johns Hopkins University. Crown 8vo, 6s. 6d.

ROYAL COLLEGE OF SCIENCE MAGAZINE.—"We can without hesitation recommend this book to elementary students."

THIRD EDITION NOW READY.

INTRODUCTION TO QUATERNIONS. By the late Professor PHILIP KELLAND, M.A., F.R.S., and P. G. TAIT, M.A. Third Edition, prepared by C. G. KNOTT, D.Sc., Lecturer in Applied Mathematics in the University of Edinburgh, formerly Professor of Physics in the Imperial University of Japan. Crown 8vo, 7s. 6d.

SECOND EDITION NOW READY.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A., LL.D.

The Session began October 1st, 1903. The College Courses are arranged with reference to the Degrees of the University of Wales, and include most of the subjects for the B.A. and B.Sc. Degrees of the London University. Students may pursue their first year of Medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional Fee for Ordinary Arts Course, £11. 1s.; Ditto for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students in Upper Bangor. Fee, Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than Twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses, apply to

JOHN EDWARD LLOYD, M.A.,
Secretary and Registrar.

UNIVERSITY OF LONDON.

THE MIDDLESEX HOSPITAL MEDICAL SCHOOL.

(Close to Oxford Circus, W.)

The SUMMER SESSION, 1904, commenced on Wednesday, 20th April.

Full opportunities for study are offered to Students preparing for any Examinations in Medicine and Surgery in the United Kingdom.

Classes will be held in the following subjects:—Midwifery, Pathological Histology, Public Health, Anatomy, Practical Physiology and Histology, Chemistry and Practical Chemistry, Therapeutics, Mental Diseases with Clinical Demonstrations, Practical Pharmacy.

Students entering in April are eligible to compete for the Entrance Scholarships (value £100 and £60) awarded at the commencement of the ensuing Winter Session. The Broderip Scholarships, Governors' Prize, Hetley Prize, Lyell Medal, Leopold Hudson Prize, and Freeman Scholarship are awarded annually; the Murray Scholarship (in connexion with the University of Aberdeen) every third year.

Eighteen resident appointments are open for competition annually, without fee.

The composition fee, admitting to the whole curriculum for the Diplomas of L.R.C.P., M.R.C.S., and L.S.A. is 135 guineas; or by three yearly instalments of 60, 50, and 35 guineas.

For University of London Students requiring Preliminary Science instruction, 145 guineas; or by instalments, 155 guineas. For members of Universities recognised by the General Medical Council and other Students who have completed their Anatomical and Physiological Studies, the fee for admission as General Students is 70 guineas; or by instalments, 75 guineas.

Students from the Universities of Oxford and Cambridge entering in May are eligible to compete for the University Scholarship of £60 awarded at the commencement of the Winter Session. Fee for Dental Students, 54 guineas.

The Residential College contains accommodation for thirty Students.

For Prospectus and further particulars apply to

J. MURRAY, M.B., F.R.C.S., *Dean.*

UNIVERSITY OF BIRMINGHAM.

SCHOLARSHIPS IN THE SCHOOL OF MODERN LANGUAGES.

TWO SCHOLARSHIPS in GERMAN (given by Mr. and Mrs. Charles Harding) of the annual value of £50 each, tenable during three years, are offered to Students entering the School of Modern Languages next Session. At the close of the third year Travelling Scholarships of £100 each, tenable at a German University for one year, may be awarded to these Scholars, provided that they have taken the B.A. Degree in the School of Modern Languages.

An Entrance Examination to the School of Modern Languages will commence on Monday, June 20th, 1904. Applications for admission must be received by the Registrar on or before June 13th.

For further particulars apply to the REGISTRAR at the University.

ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS

provides a Course of Professional Training in preparation for Work in Secondary Schools or in Families.

The Students attend the University Lectures on the Theory, History, and Methods of Education, and have systematic practice in Class Teaching in Schools.

Two Bursaries of £30 are offered to Graduates entering in October.

Apply for further particulars to the Principal, Miss M. R. WALKER, 5 Melville Street, Edinburgh.

BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON),

YORK PLACE, BAKER STREET, W.

Chairman of the Committee—Sir W. MATHER, M.P.
Treasurer—Mr. C. G. MONTEFIORE, M.A.
Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.
Principal—Miss E. LAWRENCE.

KINDERGARTEN AND SCHOOL.
Head Mistress—Miss A. YELLAND.

Students are trained for the Examinations of the National Froebel Union, and for the University of Cambridge Teachers' Examination, and Special Classes are held in subjects required for the Cambridge Higher Local Examinations.

TWO SCHOLARSHIPS of £20 each, and two of £15 each, tenable for two years at the Institute, are offered annually to Women Students who have passed certain recognized Examinations.

Prospectuses can be obtained from the PRINCIPAL.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.

JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Telegrams—"Educatorio, London."

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal—Miss STANSFELD

(Vice-President of the Ling Association of Gymnastic Teachers, Teacher of Gymnastics in the Cambridge Teachers' College, Froebel Educational Institute, Bedford Kindergarten College, Bedford High School, &c.).

THE object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Fencing, Lacrosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer.

There is an increasing demand for Teachers thoroughly trained on this system.

For Prospectus apply—37 Lansdowne Road, Bedford.

ROYAL HOLLOWAY COLLEGE

FOR WOMEN.
(UNIVERSITY OF LONDON.)

ENTRANCE SCHOLARSHIPS.—Eleven Entrance Scholarships from £75 to £35, and several Bursaries of £30, tenable for three years at the College, will be awarded on the results of an Examination to be held from June 27th to July 2nd, 1904. Names must be entered before June 1st. The College prepares Students for London Degrees and also for Oxford Honour Examinations. Inclusive fee, £90 a year.

The EASTER TERM begins on April 16th.

For forms of entry and further particulars apply to the SECRETARY, Royal Holloway College, Englefield Green S.O., Surrey.

THE ANSTEY PHYSICAL TRAINING COLLEGE FOR WOMEN TEACHERS

PROVIDES a full course of instruction in Swedish Educational Gymnastics, Medical Gymnastics, and Massage, the aim being to send out trained Teachers with increased health and bodily vigour, mental strength, and moral power; to spread a knowledge of Physiology and the Laws of Health; to teach Gymnastics, Outdoor Games, Dancing, Swimming, and other forms of Physical Exercise in Schools and Colleges; to treat cases of Spinal Curvature, and many ailments which can be cured by scientific movements.

This is a most attractive vocation for educated women, and there are plenty of good openings for those trained at this College.

Students are almost always engaged before finishing the course.

For further particulars apply to the Principal, Miss ANSTEY, The Leasowes, near Halesowen, Worcestershire.

Edited by JOHN KEEFE,

Principal of the Civil Service Academy, Liverpool and Manchester.

(Adapted also for the Classes of Technical Institutes, Higher Grade Schools; Certificate, Scholarship and other Public Examinations.)

ENGLISH COMPOSITION AND ESSAY WRITING. Adapted alike for Beginner and Advanced Student. Treats of Syntax, Synonyms, Paraphrasing, Simple Themes, Biographical Narratives, and contains ample Outlines on "Imperial Federation," "Payment of Members," "Shorter Parliaments," "Sunday Closing," "Standing Army," "Capital Punishment," "Eight Hours Question," and other subjects recently proposed in Civil Service and other Competitions. Crown 8vo, 2s. 6d.

HINTS ON COMPOSITION. Third Edition, considerably Enlarged. Demy 8vo, 6d.

"Under the title of 'Hints on English Composition,' Mr. Keefe, F.R.G.S., of Liverpool, has published a small *brochure*, which is a valuable compendium of practical information on prose composition, with special regard to the requirements of Civil Service Examinations."—*London Chronicle.*

CIVIL SERVICE SPELLING AND DICTATION BOOK. The work contains copious Lists of Words, ranged according to their number of syllables, likely to be mis-spelled, together with nearly ninety Dictation and Orthographical Exercises for Juniors and Seniors set in recent years by H.M. Civil Service Commissioners. Revised and Enlarged Edition. Crown 8vo, 1s. 6d. [*In the press.*

CIVIL SERVICE PENMANSHIP. This book contains varied Specimens of Civil Service Penmanship approved by the Examiners. It has been compiled to meet the wants of every individual student who wishes to minimize his labours in cultivating the popular "Civil Service" style of Writing. Third Edition. Fcap. folio, 1s.

INDEXING AND PRÉCIS WRITING. Many Exercises are provided in this important branch of work for candidates preparing for the Examinations, together with an Appendix. 212 pages. Crown 8vo, 2s.

CIVIL SERVICE TOT BOOK. Contains 144 Exercises in Long Tots or Compound Addition, and 192 Exercises in Cross Tots. Fourth Thousand. Fcap. oblong 4to, 1s.

HIGHER ARITHMETIC. This book contains exhaustive chapters, with ample Solutions of difficult Questions on Percentages, Stocks, Theory of Numbers, Scales of Notation, the Metric System, Duodecimals, Logarithms, Annuities, Surds, Continued Fractions, Square, Cube, and other Roots, together with 45 complete Examination Papers set during the last twenty years to competitors for Excise Assistantships and Second Division Clerkships. New and Revised Edition. Crown 8vo, 3s.

CIVIL SERVICE ARITHMETIC. Being a compilation of Papers set at Examinations for Boy Clerkships, Customs, Telegraph Learners, &c., together with Answers and an Appendix explaining Scales of Notation, the Theory of Numbers, Discount, Rate and Time in Compound Interest, Duodecimals, Clock Questions, Prime Factors, and other parts of Advanced Arithmetic usually considered difficult. Tenth Thousand. Crown 8vo, 1s. 6d.

CIVIL SERVICE BOOK-KEEPING. Examination Papers set for Second Division Clerkships, ranging over twelve years. These tests in Book-keeping are also well adapted to the needs of candidates preparing for the Examinations held by the Society of Arts, London Chamber of Commerce, and similar Examining bodies. Fcap. 4to, 1s.

DIGESTING RETURNS INTO SUMMARIES. This book contains most of the Exercises set during the last fifteen years in the open Competitions for Second Division Clerkships, Outport Clerkships, and Customs Assistants. Though mainly designed for Civil Service candidates, it will be found very useful to all who are engaged in Statistical Calculations. 2s. 6d. [*In the press.*

COPYING MANUSCRIPT. Contains Facsimiles of Exercises set in recent Civil Service Competitions. Fcap. folio, 2s.

COPYING TABULAR STATEMENTS. Contains 36 Exercises set in recent Examinations, with Hints for Practice. 4to, 1s.

A List giving full particulars of these Books, together with other Books suitable for Civil Service Candidates, will be sent post free on application.

MESSRS. LONGMANS & CO.'S LIST.

By SAMUEL RAWSON GARDINER, D.C.L., LL.D.

A STUDENT'S HISTORY OF ENGLAND.

Vol. I.: B.C. 55–A.D. 1509. With 173 Illustrations. Crown 8vo, 4s. Vol. II.: 1509–1689. With 96 Illustrations. Crown 8vo, 4s. Vol. III.: 1869–1901. With 109 Illustrations. Crown 8vo, 4s. COMPLETE IN ONE VOLUME, with 378 Illustrations. Crown 8vo, 12s.

A SCHOOL ATLAS OF ENGLISH HISTORY. With 66 Maps and 22 Plans of Battles, &c. Fcap. 4to, 5s.

OUTLINE OF ENGLISH HISTORY, B.C. 55–A.D. 1901. With 96 Woodcuts and Maps. Fcap. 8vo, 2s. 6d.

A NEW HISTORICAL ATLAS FOR SCHOOLS.

Messrs. Longmans & Co. have recently issued a New Edition of the late Prof. FREEMAN'S "HISTORICAL GEOGRAPHY OF EUROPE," price 12s. 6d., the ATLAS to which, containing 65 Maps in Colour, is issued separately, price 6s. 6d., for the use of Historical Students in Schools.

By BENJAMIN HALL KENNEDY, D.D.

THE REVISED LATIN PRIMER. Crown 8vo, 2s. 6d.

THE SHORTER LATIN PRIMER. Crown 8vo, 1s.

EXERCISES ON THE SHORTER LATIN PRIMER. By M. G. and J. E. KENNEDY and H. WILKINSON, M.A. Crown 8vo, 1s. 6d.

A KEY, for the use of Masters only. 2s. 9d. net, post free.

Works by G. S. NEWTH, F.I.C., F.C.S.,

Demonstrator in the Royal College of Science, London; Assistant Examiner in Chemistry, Board of Education.

A Text-Book of Inorganic Chemistry. With 146 Illustrations. Crown 8vo, 6s. 6d.

Chemical Analysis, Quantitative and Qualitative. With 100 Illustrations. Crown 8vo, 6s. 6d.

Chemical Lecture Experiments. With 230 Diagrams. Crown 8vo, 6s.

Elementary Practical Chemistry. With 108 Illustrations and 254 Experiments. Crown 8vo, 2s. 6d.

Works by Professor GANOT.

Translated and Edited by E. ATKINSON, Ph.D., F.C.S., and Revised by Professor A. W. REINOLD, M.A., F.R.S.

Elementary Treatise on Physics, Experimental and Applied. Sixteenth Edition (1902). With 9 Coloured Plates and Maps, and 1,048 Woodcuts. Crown 8vo, 15s.

Natural Philosophy for General Readers and Young Persons. Ninth Edition (1900). With 7 Plates, 632 Woodcuts, and an Appendix of Questions. Crown 8vo, 7s. 6d.

By the Rev. D. D. MORRIS, B.A.

This Edition has received numerous Additions, and brings up British History to the Accession of King Edward the Seventh.

The One Hundred and Second to One Hundred and Ninth Thousand.

A Class-Book History of England, designed for the use of Students preparing for the University Local Examinations, or for the London University Matriculation, and for the Higher Classes of Elementary Schools. With 24 Historical Maps and Plans of Battles, and 29 Illustrations engraved on Wood. Fcap. 8vo, 3s. 6d.

By A. A. SOMERVILLE, M.A.

A First French Writer. For the use of Lower and Middle Forms of Schools. Crown 8vo, 3s. 6d.

By FRANCIS DAVID MORICE, M.A.

Stories in Attic Greek. With Notes and Vocabulary. Crown 8vo, 3s. 6d.

By ARTHUR SIDGWICK, M.A.

A First Greek Writer. Crown 8vo, 3s. 6d.

A KEY, for the use of Masters only. 5s. 2½d. net, post free.

Introduction to Greek Prose Composition. With Exercises. Crown 8vo, 5s.

A KEY, for the use of Masters only. 5s. 3d. net, post free.

Scenes from Greek Plays. Abridged and Adapted for the use of Schools. Fcap. 8vo, 1s. 6d. each.

Aristophanes.—The Clouds. The Frogs. The Knights. Plutus.

Euripides.—Iphigenia in Tauris. The Cyclops. Ion. Electra. Alcestis. Bacchae. Hecuba. Medea.

An Introduction to Greek Verse Composition. By ARTHUR SIDGWICK, M.A., and F. D. MORICE, M.A. With Exercises. Crown 8vo, 5s.

Full and complete CATALOGUE post free on application.

AN ELEMENTARY AND INTERMEDIATE ALGEBRA.

With Exercises and Answers. By the Rev. J. LIGHTFOOT, D.Sc., M.A.
Crown 8vo, 472 pp., strongly bound in cloth. **Price 4s. 6d.**

This valuable new work covers all the Algebra generally required for the Preliminary and Intermediate Examinations at the Universities. A special feature is the very clear and interesting treatment of graphic methods.

Specimen pages post free on application.

"A well arranged practical book, well up to modern requirements."—*Head Teacher.*

"Logical development; principles rigorously established."—*Educational Times.*

"A most valuable introduction to the study of algebra."—*Irish Teachers' Journal.*

"The teaching is unimpeachable and healthy. We wish success to this fine exposition of algebra."—*Schoolmaster.*

"An excellent treatment of the whole subject."—*Education Gazette* (issued by the Department of Public Education, South Africa).

"The matter is very logically arranged, and the illustrative examples are perfect models of mathematical reasoning and statement."—*Teachers' Aid.*

"A first-rate book. It covers much ground, is full of lucid explanation, has abundant examples, is capitally planned, and possesses some unique features. Altogether, it should take a high place among the best of modern school books."—*Board Teacher.*

"Among newer mathematical text-books suitable for the use of young students there are few that have come under our notice that are so good as 'An Elementary and Intermediate Algebra,' by Dr. Lightfoot. . . . The book is a most commendable piece of work and deserving of high praise."—*School Guardian.*

"In spite of the large number of algebra books on the market, we cordially welcome the appearance of this one. It is well arranged, and presents the subject in logical steps: the teaching is driven home by concrete illustrations; and what innovations have been made are distinct improvements."—*Practical Teacher.*

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL AND LOGICAL FOUNDATIONS OF INTELLECTUAL EDUCATION.

To be delivered by **W. E. JOHNSON**, M.A., Sidgwick Lecturer in Moral Science in the University of Cambridge.

SYLLABUS.

I. Provisional definition of education as a practical science. Its dependence upon psychology. Its connection with the normative sciences of logic, æsthetics, and ethics. Education must assume general agreement with respect to the ultimate ends of life. It is a science of means, not of ends. A comparison between the lecturer's standpoint in education and the theories of Herbart. How far intellectual, æsthetic, and moral education can be distinguished. The position of so-called physical education. The practical opportunities afforded to the teacher of contributing to psychological observation. The two chief methods of obtaining particular psychological data—(i.) the introspective, (ii.) the interpretative. Range, difficulties, and connections of these two methods.

II. General analysis of mental states. The three fundamentally distinct factors—knowledge, feeling, activity. These three regarded as mutually dependent, not as antagonistic. Especially in the higher forms of mental process, action is prompted by feeling and guided by knowledge; and such action is spoken of as the manifestation of the will. Different forms and different degrees of activity. Education as mainly concerned with the control of the conscious activities of the child. Preliminary definitions of such terms as conation and purpose, interest and attention, &c.

III. The classification of intellectual processes by reference to so-called faculties. Preliminary definitions of sensation, perception, observation, memory, imagination, conception, reasoning. The practical errors that have arisen from a false view of this classification things connected which should be separated, and things separated which should be connected. The key for understanding the due connection and separation of educational aims and influences to be found in the principle of unity of interest. Interest as progressive, and as involving subjective activity. The various faculties developed *pari passu* as they are brought to bear upon any object of study. The growing stages of childhood distinguished by the objects of interest, rather than by the prevalent exercise of one or other faculty. Two-fold function of the teacher in regard to interest. The whole theory summed up in the doctrine of apperception.

IV. General account of intellectual development. Active and receptive phases—the former continuously increasing in predominance as compared with the latter. Parallel growth in mind and brain. Retentiveness and modifiability. Differentiation and assimilation. Powers of distinguishing and of connecting. Facility and familiarity. The different forms of analysis and synthesis. Mental process and mental product. Permanent acquisitions and variable applications.

V. Percept on as a direct and purposive co-ordination of sensory and motor elements. Temporal and spatial synthesis. Acquisition of physical aptitudes by practice. The gradually attained control and co-ordination of the sense-organs and organs of movement. Sense-discrimination aided by motor production—speaking, drawing, singing, &c. Imitation. Observation as systematized control of perceptual processes. The interest of curiosity. Prospective and retrospective attention and "meaning." Continuity of purpose and interest in such activities as listening and watching.

VI. Association or suggestion. Distinction and relation between integration and redintegration. Association (*a*) between parts contained in a common whole, and (*b*) between wholes containing a common part. Fundamental principles underlying all cases of association. Different forms of association. Activity and interest involved in association. Control of association by purpose. Pedagogic maxims based on the doctrine of association. Technical aids to association. Co-operative and antagonistic associations.

VII. Memory—ambiguities of the term. Some writers limit it to reminiscence. Broadly it includes the reproduction, in some kind of connected whole, either (*a*) of movements or (*b*) of images or (*c*) of ideas. In particular, verbal memory is based on the repetition, in a connected series, of the articulatory movements of speech. Man's intellectual powers as dependent largely on the control and initiation of these movements. Language as aiding and aided by accompanying images and ideas through a double process of association. The free reproduction, in varied forms of language, of significant trains of images and ideas. The teaching of composition. First beginnings of constructive thought.

VIII. Imagination: its three kinds, reproductive, interpretative, and originative. Imagination and perception cover the same ground. The power of imagination gauged by (*a*) its vividness and consequent influence upon feeling, (*b*) its subservience to purposive control. Childish imagination not more vivid, but less controlled, than that of the adult. Difficulties in exercising the child's imagination through the medium of words. Practically, imagination cannot be separated from ideation. Illustrations from the teaching of geography and history. The connection of imagination with æsthetic feeling and appreciation. Poetry and literature.

IX. Ideas and conceptions. How knowledge passes from the relatively particular and indefinite to the relatively general and definite. The development of knowledge as evidenced by the presence of agreements or differences, not by the absence of differences or agreements. How to test a child's powers of thought by reference to his use of language. Ignorance of the conventions of adult language often confused with defect in the power of perceiving agreements or differences between things. Power of understanding to be measured by complexity and consistency in the use of language. The child's employment of nouns, adjectives, verbs, &c. The concrete and the abstract.

X. Terms and elementary propositions. Comparison between the psychological and the logical account of the intension and extension of terms. Logical definition and division. The proposition as expressing the analytic-synthetic function of thought. The conceptions of thinghood, causality, and personality. The judgment as arising out of an attitude of interrogation or apparent inconsistency. Suspense and conviction. The apprehension of truth and reality as involving counterhimitation between subject and object. The developing conception of self in its relation to other selves.

XI. General judgments and reasoning. The avoidance of inconsistency. Deductive and inductive inference. Distinctions between the psychological principles of discovery and the logical principles of proof. The teaching of deductive and of inductive sciences. The importance of the heuristic method in both. Such teaching should promote (*a*) activity, (*b*) understanding, (*c*) retention. Danger in the teaching of inductive sciences of encouraging unsound reasoning. Educational aspects of the well known methods of induction.

XII. New formulations and general summary of principles, with further applications.

C. R. HODGSON, B.A., *Secretary.*

MESSRS. BELL'S NEW BOOKS.

Educational Catalogue post free on application.

PART I. NOW READY. With or without Answers. 2s. 6d.

THE COMPLETE BOOK will be ready in JUNE. 4s. 6d.

NEW SCHOOL ARITHMETIC.

By **CHARLES PENDLEBURY, M.A.**, Senior Mathematical Master at St. Paul's School;

Assisted by **F. E. ROBINSON, M.A.**, Assistant Master at St. Paul's School.

Since Mr. Pendlebury's original Text-book on Arithmetic was first published, there have naturally been some changes in the ideas of how the subject should be taught, and some additional demands due to the increase of scientific requirements. Some of these changes were formulated in the report issued in 1902 by a Committee appointed by the Mathematical Association. The changes there recommended as regards Arithmetic, although not so far-reaching as those advocated in the teaching of Geometry, are yet very important, and they have been embodied in this book.

The basis of the book is the Sixteenth Edition of Pendlebury's Arithmetic. Much of the old matter has been retained, and much new matter has been added. Some alteration in the arrangement of the sections has also been made. The new feature which will perhaps be the most noticeable is the position assigned to the Metric System of Weights and Measures. They are introduced here simultaneously with the corresponding British Standard Weights and Measures, and are treated as on practically the same footing.

The new method of Multiplication is adopted exclusively.

Graphical illustrations are used very freely, especially in the development of the earlier parts of the subject—in the simple rules, G.C.M., L.C.M., fractions, and elsewhere. The general use of Graphs for purposes of reduction and in other problems is treated in a separate section.

In the sections on Approximation and Decimalization of Money these operations are fully discussed; and in the Commercial Sections of the book—practice, proportion, interest, &c.—the method of decimalizing money is used very generally.

Many examining bodies having sanctioned the use of an algebraical symbol in place of a verbal periphrasis, the author has availed himself of this freedom wherever the nature of the problem allowed him to do so with advantage.

The section on Elementary Mensuration, and the new section on Logarithms, will be of use to the more advanced student.

The Examples of all kinds are unusually abundant, and at the end of the book is a collection of easy Examination Papers, consisting of seven questions each, followed by a large collection of more difficult problems.

ELEMENTARY GEOMETRY.

By **W. M. BAKER, M.A.**, Head Master of the Military and Civil Department at Cheltenham College, and **A. A. BOURNE, M.A.**, Head Mathematical Master on the Classical Side at Cheltenham College.

THIS BOOK IS NOW PUBLISHED IN THE FOLLOWING FORMS:—

COMPLETE. Crown 8vo. Third Edition. 4s. 6d.

Book I. Fourth Edition. 1s.
Books I. and II. Fourth Edition. 1s. 6d.
Books I.-III. Sixth Edition. 2s. 6d.
Books II. and III. 1s. 6d.
Books II.-IV. 2s. 6d.
Books I.-IV. Fourth Edition. 3s.
Books III. and IV. 1s. 6d.
Book IV. 1s.
Books IV.-VII. Second Edition. 3s.
Books V.-VII. 2s. 6d.
ANSWERS to the Numerical and Mensuration Examples. 6d.
A FULL KEY. 6s. net.
ELEMENTARY GRAPHS. Reprinted from the above. New and Enlarged Edition. 6d. net.

FOURTH EDITION. Crown 8vo, with or without Answers, 3s.

EXAMPLES IN ALGEBRA.

By C. O. TUCKEY, M.A., Assistant Master at Charterhouse, late Scholar of Trinity College, Cambridge.

Crown 8vo, with or without Answers, 1s. 6d.

EXAMPLES IN PRACTICAL GEOMETRY AND MENSURATION.

By J. W. MARSHALL, M.A., and C. O. TUCKEY, M.A., Assistant Masters at Charterhouse.

"One is almost inclined to think that a good collection of examples like this is better to put into the hands of the class than any text-book. The good teacher will supply the text as it is wanted."—*Preparatory School Review.*

IN TWO PARTS. With numerous Illustrations. Crown 8vo, 1s. 6d. each.

BELL'S FRENCH COURSE.

By PERCY ATHERTON, M.A., Assistant Master at Haileybury College.

"The lessons are thoroughly progressive and exceedingly intelligent in their points. The selections for reading exercises are well chosen, and the lessons in grammar not only complete the book, but help towards its value as a teaching medium. In every sense the volume is a success."—*Practical Teacher.*

"Well suited to help a teacher to combine the old and the new methods—drill in grammar and fluency of speech."—*Times.*

THE STUDENTS' SHAKESPEARE.

Educational Times.—"On the whole, we do not think that any better editions are available."

THE TRAGEDY OF HAMLET. Edited, for the use of Students, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge. Fcap. 8vo, 3s.

Guardian.—"In the Students' Shakespeare edition of 'Hamlet' Mr. Verity has undoubtedly surpassed all previous efforts."

Pall Mall Gazette.—"It is not often that one can be forced into enthusiasm by a text-book, but we have here a perfect example of the manner in which Shakespeare should be read and studied."

THE TRAGEDY OF MACBETH. Edited by A. W. VERITY, M.A. Fcap. 8vo, 2s. 6d.

Guardian.—"An edition of rare merit, suited to the highest study of the poem."

ELEMENTARY GEOMETRY (PRACTICAL AND THEORETICAL). By C. GODFREY, M.A., Senior Mathematical Master at Winchester College, and A. W. SIDDONS, M.A., Fellow of Jesus College, Cambridge, Assistant Master at Harrow School.

Now Ready (1) Complete in One Volume, Third Impression, large crown 8vo, pages xi + 355. 3s. 6d.

Or (2) in Two Volumes, Vol. I. (Experimental Course, and Books I. and II.), 2s.; Vol. II. (Books III. and IV.), 2s.

Or (3) in Five Parts:—

Part I.	Experimental Geometry.	1s.
Part II.	Theoretical Geometry. Book I.	1s.
Part II.	" " Book II.—Area.	1s.
Part II.	" " Book III.—The Circle.	1s.
Part II.	" " Book IV.—Similarity.	1s.

ANSWERS TO THE EXAMPLES, 4d., post free.

A Key is in preparation.

Guardian, January 13, 1904.—"A most admirable text-book for the beginner. . . . The experimental part, which occupies the first sixty pages, is of the simplest character. . . . In the theoretical part the treatment is eminently satisfactory. . . . The book has every claim to a wide recognition."

Preparatory Schools Review.—"After a careful examination of the various books on the New Geometry that have recently been published, we have no hesitation in commending Godfrey and Siddons's book as the best for preparatory schools."

THE CAMBRIDGE PHYSICAL SERIES.—New Volumes.

General Editors—

F. H. NEVILLE, M.A., F.R.S., and W. C. D. WHETHAM, M.A., F.R.S.

RADIO-ACTIVITY. By E. RUTHERFORD, D.Sc., F.R.S., F.R.S.C., Macdonald Professor of Physics, McGill University, Montreal. Demy 8vo, 10s. 6d. net.

CONDUCTION OF ELECTRICITY THROUGH GASES. By J. J. THOMSON, D.Sc., LL.D., Ph.D., F.R.S., Fellow of Trinity College, Cambridge, Cavendish Professor of Experimental Physics, Cambridge. Demy 8vo, 16s.

Times.—"Radium and the property of radio-activity presented the physicist with a most abstruse and intricate problem, and, largely owing to the assistance derived from these researches, that problem is now completely solved."

CAMBRIDGE LOCAL EXAMINATIONS, DECEMBER, 1904.

PITT PRESS SHAKESPEARE FOR SCHOOLS.

KING RICHARD II. With Introduction, Notes, Glossary, and Index. By A. W. VERITY, M.A. Third Edition. 1s. 6d.

School World.—"It would be difficult to praise this work (or this series) too highly."

PITT PRESS SERIES. New Volumes.

SCOTT.—KENILWORTH. Edited, with Introduction and Notes, by J. H. FLATHER, M.A., Emmanuel College. 2s. 6d. [*Juniors and Seniors.*

School World.—"An admirable presentation in educational form of what is perhaps Scott's most fascinating novel. . . . Altogether this edition is worthy of high praise."

THE STORY OF THE KINGS OF ROME. Edited by G. M. EDWARDS, M.A., Fellow and Tutor of Sidney Sussex College. 1s. 6d. [*Preliminary.*

Guardian.—"A useful and attractive book for early use. . . . This book contains much useful idiom, and is an excellent introduction to the legends of Rome."

The Educational Times.

The Mosely Educational Commission.

Mr. Mosely has lost no time in getting together the reports of the members of his Educational Commission to the United States. They fill a goodly volume of four hundred close-printed pages, which may be obtained from the publishers (the Co-operative Printing Society, Tudor Street, E.C.) at the nominal price of one shilling; nay, Mr. Mosely has arranged that "any Education Authority in the British Isles (or member of same), county councillor, local manager, head master, head mistress, or registered teacher may obtain copies *free* on forwarding to the publishers the cost of postage (4d.) and stating qualifications." We trust that both the general public and the special classes mentioned will liberally avail themselves of Mr. Mosely's generosity. For it is only in this way that they are likely to appreciate the variety of matter and opinion exhibited in the volume, no adequate summary being possible within the narrow newspaper limits. And the main value of the Report lies, not so much in the views expressed upon the general question, but rather in the independent opinions of the special representatives of special departments or of special aspects. The reports vary greatly in importance, as in extent: some are the impressions of a first visit for a few weeks, others include comparisons with longer previous visits; most are the skilled expression of wide and prolonged experience, a few the rough and ready results of a more limited outlook. Yet there is not one of them but carries a message of suggestion, whether by way of warning or of encouragement. Mr. Mosely deserves the warm thanks of all serious educationists for his thoughtful and public-spirited enterprise. And everybody — and especially such as know American hospitality—will appreciate the warmth of his gratifying reception on the other side of the Atlantic, and join in his grateful acknowledgments.

Mr. Mosely prefixes an account of the ready assistance accorded him by the Board of Education, and of the objects he proposed. The subjects of investigation were ranged under four heads:

1. The development of individuality in the primary schools.
2. The social and intellectual effects of the wide distribution of secondary education.
3. The effect of specific instruction given (1) in business methods, (2) in applied science.
4. The present state of opinion as to the value of professional and technical instruction of University rank designed with special reference to the tasks of business life.

The essential feature of the inquiry, to Mr. Mosely's own mind at least, was "to ascertain how far education in the United States is responsible for her industrial progress." Personally he is "convinced that, if the British Empire is to hold its own, our old industrial methods will have to be dropped, and especially our present method of popular education will have to be changed." He was deeply impressed with "the intense belief of the Americans in the education of the masses," with their conviction that "from a purely business point of view the money spent on education is a magnificent investment for their country," and with the fine educational buildings and their lavish equipment. He was particularly struck with "the success attained in making the scholars self-reliant—in bringing out their individual qualities and teaching them to reason"; indeed, "in some respects," he says, "this seems to me to be the most important factor of all in American education, and I think it largely accounts for the success of the pupils in after life." The comments of many of the Commissioners on this feature of the schools are very instructive, tending to give weight to other considerations as factors in the result. At the same time Mr. Mosely looks with less favour on certain other aspects of American education: the large preponderance of women teachers (for "teacher" is feminine in the American vocabulary), the inadequacy of salaries, the neglect of musical education amongst the school-children, and other minor defects, "merely those of youth." He is very fair-minded in his remarks, and, although he "does not pose as an educationalist," his comments are very well worth study.

The Joint Report of the Commissioners is very brief and pointed. They are all "deeply impressed" with the evidences of "the absolute belief in the value of education, both to the community at large and to agriculture, commerce, manufactures, and the service of the State." This belief in education has in the past been "the effect rather than the cause of American prosperity," but "during the last quarter

Digitized by Google

of a century education has had a powerful and far-reaching influence, and it cannot be doubted that in the future it will become more and more the cause of industrial and commercial progress and of national well-being." They accordingly "desire to impress on the British public the absolute need of immediate preparation on our part to meet the competition" of American commerce, conducted by "trained men, gifted with both enterprise and knowledge." They are also impressed with the spirit that animates teachers and pupils alike; and they remark that "the absence of class prejudices and of any 'religious difficulty' serves most materially to facilitate the work of the schools." They note the most important movement towards the closest connexion between theory and practice: "the services of experts in various branches of knowledge are, therefore, held in high esteem and are in constant demand." They are very forcibly struck with "the important part which manual training is beginning to assume in the schools." Though impressed with the public and private liberality on behalf of education, they regard the remuneration of teachers as "by no means always placed on a satisfactory basis"; and, with the exception of Prof. Armstrong and Mr. Blair, they "view somewhat with alarm the growing preponderance of women teachers." Lastly, they draw attention to "the extent to which the work of education is organized and its various grades co-ordinated," and impress the need of effecting similar organization in this country.

The generalities are limited in the particular reports in various ways and in various degrees; and we must refer the reader to the volume itself. Apart from the more technical reports, it may not be invidious to draw special attention to the comments of Dr. Gray (Bradfield College), Principals Reichel and Rhŷs, and Dr. Gregory Foster. But the most caustic of all is Prof. Armstrong. For instance:

> In point of fact, American cuteness would seem to be conditioned by environment rather than by school education. It is difficult to trace the development of any American peculiarities to the schools—or to find any evidence even that the schools seek to utilize and develop the national idiosyncrasies.
>
> The belief in secondary education, especially for boys, is far less general [than the belief in elementary education]—it is probably no greater than ours—and yet it seems to me that it is by the existence of a well developed public high-school system that America is distinguished most from us, and potentially placed most in advance of us.
>
> American education is for the most part still governed by eminently academic and conservative traditions: in some respects it lacks depth and practical outlook to a strange extent.
>
> Evening class instruction, such as has grown up under our Science and Art Department, is almost unknown there.
>
> In interior arrangements even the most modern common schools are not superior to our own.
>
> The amount of attention paid in the [common] schools to reading and composition is in no way sufficient or satisfactory. . . . I was favourably impressed by the way in which English literature was taught [in the public high schools]; but I could not discover that the teaching was carried to a logical end and fondness for reading inculcated.
>
> The teaching of drawing [in the common schools] is also undeveloped. . . . I did not learn that the attempt was being made anywhere to put the teaching of arithmetic on a practical common-sense basis. . . . The schools are undoubtedly behind ours in promoting manual training, and even more bookish than ours in their tendencies. . . . The Nature-study lessons I witnessed, when not specifically botanical or zoological and scientific in character, were eminently superficial and worthless.

All the same, it would be unreasonable to expect perfection, even in America; and, with all deductions, there still remains in the detail of these reports a vast amount of illuminative criticism, which, it is to be hoped, will be turned to practical account here, as it no doubt will in America. Even Prof. Armstrong is far from being wholly adverse: he praises a good thing as vigorously as he denounces a bad thing. The whole Report is certainly a very valuable addition to the educational library. But it must be read and reduced to practice.

The Future of the Schools.

THERE will be no occasion to despair of elementary education so long as the National Union of Teachers produces, and receives with appreciation, such thoughtful discourses as the Presidential Address of Mr. Sharples at Portsmouth. In breadth of conception, in elevation of tone, and in earnestness of concentration upon the main point—the future of the children—this address offers impressive matter of consideration to those that are wrangling over tithes of mint and anise and cummin, as well as to those that have not yet grasped the range of the problems confronting the nation in these latter days. Mr. Sharples "implores the leaders of our Christian Churches to come to some common agreement for the sake of the children"; for otherwise "men will be driven to the only logical conclusion—secular instruction alone" (as many have already been driven)—a result that he, with most thoughtful men, would regard as a national calamity: "once the Bible is banished from the schools it will soon become a rare book in the home." There can be no doubt that the mass of the people are in favour of simple Biblical teaching in the schools; and it is not inside the schools, but outside of them, that there is—speaking broadly—any such thing as a "religious difficulty."

Mr. Sharples justly acknowledges that, as a rule, "the Education Committees have taken up their work with a broad-minded desire to carry out the provisions of the Act in the best interests of the children and the nation." Such an expression of confidence is significant, and it is very welcome. The exceptions will soon have to bend to conformity with the rule. The Committees are at once confronted with "a startling dearth of efficient teaching power." "Imagine a county in the position of Derbyshire," says Mr. Sharples, "where we read: 'We have particulars of schools where there is only one certificated teacher for each 100, 105, 107, 113, 120, 123, 124, 142, 145, 171, 180, 235, 237, 240, and even 353 children.'" There are counties that need a reinforcement of hundreds of certificated teachers. The remedy of "this enormous shortage" is "a prime and urgent necessity." Of course, Mr. Sharples has no alternative but to demand more money: the thing can be done upon no other terms than "by making the salaries of teachers worthy of their office, and sufficiently attractive to bring in a good supply of the 'raw material.'" The memorandum of the Board of Education on the training of pupil-teachers and students in training colleges is admirable in sense and in tone: but where is the money to raise its pious aspirations to solid facts of practical business? "If education is a branch of the national service," says Mr. Sharples, "the training of teachers should be a national, and not a local, charge; teachers will be trained, not for the locality, but for the nation." The contention seems obvious enough. The

Digitized by Google

House of Commons, however, has already agreed that the greater part of the cost shall be charged on the national Exchequer. But a still more definite settlement of the route would save misdirected expenditure and irksome wanderings along doubtful roads; but somehow it is all against the grain of our political and administrative genius to take thorough and decisive measures on distinct principles.

The complicated and difficult question of co-ordination will scarcely be forced: it will have to grow to solution. There is no longer any question of the importance of enabling the fit children to pass on from the primary school to higher and wider fields. "In hundreds of villages," however, Mr. Sharples points out, "it is not possible to link up the elementary schools with a good secondary school," even if the children did not continue to leave before being adequately prepared for such a school. If they stay, then arises the question of a sufficient staff; and Mr. Sharples suggests "the placing at the top class of every school in the country an additional certificated teacher." The proposal appears to be effective, and it is clearly simple; perhaps it is "open to the poorest Authority"; but at the same time it emphasizes the pressure of the question of an adequate supply of teachers. The higher-grade elementary schools, in spite of their chequered experiences, will now doubtless remain one —as, in many cases, they have been the only—bridge to the technical schools; and, if it be the case that "before there can be a real linking-up of the primary schools to the grammar schools the curricula of the lower forms in the latter schools would require a radical change," then such a change will be inevitable, whether it do or do not involve a postponement of such subjects as Latin and Greek to a later age. There is much to be considered at this point, and it is to be hoped that no changes will be rashly effected. Not that we should wish any undue delay; but it is well to be sure of the facts, and all the pertinent facts, before proceeding to definitive action.

The organization of the secondary schools, Mr. Sharples acknowledges, will be the most difficult task of the Authorities; and the correlation of the curricula of the various types of schools will be the stiffest job of all. As to private schools, Mr. Sharples says:

> For a time, at least, it will be necessary to utilize the private schools now in existence, and, after careful inquiry as to curricula and equipment, it may be necessary to subsidize them, subject to the usual safeguards as to representation on the management. None of this type should be aided, however, whose curricula do not form a link which will couple on to the technical school or University College.

Here, again, is a host of complications which need not be discussed speculatively; only it will be well to keep steadily in view the value of independent phases of educational work as well as the advantages of co-ordination. As to evening schools, Mr. Sharples revives an old contention of his: "that all youths employed in skilled trades or commercial houses should be compelled to attend classes two or three evenings per week in winter—classes where they could be taught the principles underlying the practical work they are taught in the workshops," the employers paying the fees in consideration of the benefit they receive. This course, he says, is actually taken now by many enlightened employers. Well, employers can lay down their own conditions—at least, some of them; and no doubt young fellows spend much of their time to less purpose; yet the principle of compulsion ought to be applied with very great hesitation. We are aware of the contrast at Charlottenburg: but we should like to see our Charlottenburgs filled by the natural force of a healthy public opinion, which will be all the better if it grow without compulsion. Mr. Sharples concludes with a warning note on the near possibilities of conflict between the modes of Government inspection and of Local Authority inspection, and he not obscurely hints that there is danger of a revival in local methods of ideas that have been happily abandoned in public methods. Let us hope that wiser counsels will prevail.

NOTES.

Now is "the appointed day" for the operation of the London Education Act. There has been not a little misgiving as to the prudence of the County Council in undertaking so promptly the conduct of such a large and complicated business. From Sir William Anson's statement it appears that only thirty-eight Education Committees have put the general Act in operation at the earliest possible date, others finding themselves compelled by the difficulty of making adequate arrangements to ask for postponements varying from one up to twelve months. The London County Council, however, has never been lacking in courage or confidence and one can but hope that its present alacrity will be justified in the result.

While, however, the Act comes generally into operation on May 1, the Board of Education have intimated (April 22) that there must be delay on one or two points. They

> appoint as the appointed day for the purposes of Sub-section (1) of Section 2 of the Act, and for the purpose of the repeal in London of Section 15 of the Elementary Education Act, 1870, the 1st day of July, 1904, or such later day or days as may be appointed by the Board of Education hereafter for the purpose.

The reference is to the appointment and constitution of bodies of managers of public elementary schools provided by the Local Education Authority.

The Scottish Education Bill has been generally received with a chorus of satisfaction—a natural result of the knowledge of Scottish opinion possessed by the late and the present Secretary for Scotland. Much has been made—and, probably enough, more will still be made—of the divergences in principle between the English Act and the Scottish Bill; but a sufficient explanation lies in the difference of the cases. As will be seen from a memorandum we reprint on another page, the Educational Institute gives the Bill a warm welcome, and offers criticisms only in details—criticisms, however, that ought to carry great weight. The tone is thoroughly democratic, and there can be no doubt that the Institute faithfully reflects the opinion of the country. If there are to be four Provincial Councils, it does not appear why there should not be five—Dundee already complains, and reasonably, that it is not constituted a centre; but there seems to be a tolerably strong feeling that a simple National Council would be better, whether

Digitized by Google

alone or working through Provincial Committees. There must, we apprehend, be some elasticity in defining the suitable area—in some cases a grouping of districts, and even of counties. For, as the *Educational News* pertinently asks, "What can Kinross and Clackmannan do for higher and technical education in their position of isolation?" And the question applies still more pointedly to not a few districts. We have no doubt that Scottish opinion, as usual, will get its own way, and that the Bill will promptly get hammered into a shape alike satisfactory to the people and efficient for the purposes of education.

We quote the paragraph on private schools in the recent resolution of the Government of India outlining their educational policy. We italicize one or two of the points:

From the earliest days of British rule in India private enterprise has played a great part in the promotion of both English and vernacular education, and *every agency that could be induced to help in the work of imparting sound instruction has always been welcomed by the State.* The system of grants in aid was intended to elicit support from local resources, and to foster a spirit of initiative and combination for local ends. It is supplemented by the direct action of Government, which, speaking generally, sets the standard and undertakes work to which private effort is not equal, or for which it is not forthcoming. Thus the educational machinery now at work in India comprises not only institutions managed by Government, by District and Municipal Boards, and by Native States, but also institutions under private management, whether aided by Government or by Local Authorities or unaided. All of those which comply with certain conditions are classed as *public institutions. They number* 105,306 *in all; and over* 82,500 *are under private management.*

The progressive devolution of primary, secondary, and collegiate education upon private enterprise, and the continuous withdrawal of Government from competition therewith, was recommended by the Education Committee in 1883, and the advice has been generally acted upon. But, while accepting this policy, the Government of India at the same time recognize the extreme importance of the principle that in each branch of education Government should maintain a limited number of institutions both as models for private enterprise to follow and in order to uphold a high standard of education. In withdrawing from direct management, it is further essential that Government should retain a general control, by means of efficient inspection, over all public educational institutions.

Much might be said on this declaration of policy, but we content ourselves with pointing out the argument in favour of the largest freedom to the private schools of this country.

"The work of the college," writes the Hon. Seth Low, "is to teach that which is already known; the work of the University is, in addition to this, to inquire, to ascertain what lies beyond the line that marks the limit of the known." And this is getting to be more and more recognized nowadays. What is less vividly recognized is the immensity of the unknown, the importance of diminishing its extent, and the possibilities of knowing more. Very instructive and encouraging on this point is a lecture on "Research in State Universities," recently delivered to the Research Club of Michigan by Prof. Israel C. Russell, of Michigan University, and published in the *University Bulletin* (New Series, Vol. V., No. 5). Prof. Russell emphasizes the point "that all man has gained which makes him the superior of the beasts of the fields has come as a reward for increasing his knowledge of the cosmos in which his lot is cast." The recognition of the fact that discovery is the mainspring of progress has come forward with the development of industries, and it still needs to be inculcated even on the industrial world; but Prof. Russell takes care to affirm that "in a large view of human advancement research work in pure philosophy, from which but little direct aid to industry is perhaps furnished, must be reckoned fully as important as the discoveries of the chemist, the physicist, and others, which are widely utilized in enhancing man's material welfare." The things of the spirit are "fully as important" as the material conditions. Well, the reports of the Advisory Committees of the Carnegie Institution at Washington, though restricted largely to the United States and looking only to work supplementary to the investigations of Universities, individuals, societies, &c., sketch out plans for five years at a probable expenditure of some 30,000,000 dols., or three times the present capital of the Institution. This should open some heavy eyes with a start. Are *we* to enter for this race of "research"?

Mrs. Ogilvie Gordon, D.Sc., Ph.D., recently delivered a very practical address to the National Union of Women Workers at Glasgow, which is now available in pamphlet form (Aberdeen University Press). She addressed herself mainly to the educative advantages to be secured for girls, with a special eye to the reconstruction of Scottish education now in hand. "We wish opportunity for each individual woman," she said—"no matter in what status she is born—to develop her natural talents to the utmost of her desire, and to enter a trade or profession with her prospects of recognition and advancement limited by capacity only, not by sex"—"an open world." Well, it is no more than asked for on behalf of the other sex. "In the case of preparation for a scholastic or professional calling," she admits, "there exists an admirably constructed, consecutive plan, whereby any capable girl is launched by the educational authorities as an expert in her chosen means of livelihood," though even there the limitations are not inconsiderable; but probably Mrs. Ogilvie Gordon had specially in view teaching posts in elementary and (to some extent) secondary schools. But

the regrettable fact for us in Scotland is that an extensive field of training in the scientific and linguistic departments, as well as in special courses leading to women's handicrafts, clerkships, and appointments under Local Authorities, is attempted either inadequately in secondary and higher-grade day schools, or is not attempted at all.

Physical laboratories "are at present entirely for boys, not for girls"—"only one of the many anomalies in the present lop-sided education of our girls." "We are in Scotland urgently in want of technical and commercial day schools for girls, upon the same lines as the scientific and technical institutes in London, but with special adaptations." Mrs. Ogilvie Gordon finds "the weakest feature of our present national system of girls' education" in its fragmentary character after the girls leave the elementary schools at fourteen. The whole address is sensible, stimulating, and opportune.

The strange utterances that judges sometimes permit themselves to make, especially *de plano*, happily do not always prejudice them on the bench. Everybody that has the least notion of the urgent necessities of English law studies is looking with interest for the establishment of a real school of law, and Lord Justice Vaughan Williams, according to the newspapers, declares himself against such

Digitized by Google

an institution and, unfortunately for him, gives his reason. That sapient reason is that "there is an antagonism between a law school and a system of law which is built partly on precedent and partly on what he could best describe as judge-made law." The distinction between precedent and judge-made law is subtle enough to have charmed Bentham and Austin; and how the antagonism operates—or can possibly operate otherwise than advantageously to the law, at all events—the Lord Justice does not explain. Moreover, he is said to have "feared that, if once we had a school of law in this country, the necessary consequence would be a code, which, he thought, would be the absolute destruction of jurisprudence and the science of law." Upon this Sir Frederick Pollock very naturally suggests the experience of the United States ("under the common law and following its methods in every point"), France, Germany (which both have codes, and yet, somehow, continue to cultivate legal science), and even England (whose commercial jurisprudence seems to thrive in spite of the codification of several important branches). One would fain hope that such views are not shared by other occupants of the judicial bench, Lords Justices or others: they are such startling contradictions of plain facts. It seems, then, that it is not schoolmasters alone that need to be delivered, by scientific and historical study, from disastrous rule of thumb.

SUMMARY OF THE MONTH.

In order "solely to relieve the consciences of those who profess to be oppressed," the Bishop of Bath and Wells suggests the establishment of "a clearing house (of the nature of a railway clearing house)" in connexion with the Board of Education.

2. To this clearing house let every County and Local Authority notify with regularity the amount of rate it is intending to levy for primary schools, specifying how much of this is required for provided or Council schools, and how much for non-provided or voluntary schools.

3. Let each ratepayer who is conscientiously opposed to paying any rate towards the support of voluntary schools be allowed (on making a declaration to this effect) to earmark his rate "for the support of provided schools only."

4. Let the amount thus earmarked be notified also to the clearing house.

5. An adjustment of the rates levied on different localities can be easily made at the clearing house; so that, however numerous might be the strained consciences in some districts, a transference of ratepayers' money not so earmarked would prevent any difficulties being experienced.

Dr. Clifford, while admitting that the plan is workable (as in the case of Roman Catholic and Protestant schools in Montreal), holds that "this is masking the difficulty rather than mastering it," and looks to a General Election for a definitive settlement.

The report of Mr. A. T. Lawrence, K.C., "that the County Council of Carmarthenshire as the Local Education Authority have failed to fulfil their duties under the Education Act of 1902 towards the forty-eight public elementary schools within their area in" the four points charged against them, has been laid on the table of the House of Commons.

The Board of Education has replied to the Cardiff Corporation, agreeing (with reservations) to the town's suggestion that its scheme under the Education Act should be similar to that of the London County Council, except that, instead of co-opting five members of the School Board, it should co-opt only three. The Board states, however, that in succeeding years the co-opted members must not necessarily be members of the School Board; for there may not then be any such members available. Finally, the Board agrees that, if its conditions are accepted by the Corporation, the intended inquiry into the failure of the Corporation to formulate a scheme shall not be held.

Sir William Anson introduced an Education (Local Authority Default) Bill (April 26) to meet the education crisis in Wales. It provides (1) that where an Education Authority is "in default" the Board of Education may make an order enabling the local managers to appoint teachers and to provide all necessaries for the school, repay the managers the money so expended, and deduct it from the Parliamentary grant to the County Council defaulting.

A conference of Education Committees of County Boroughs, non-County Boroughs, and Urban District Councils of England and Wales was held in London (April 13) for the purpose of forming an Association of Education Committees. Rules were agreed to, and it was resolved that the functions of the organization should be to watch over and protect the general interests of education as they might be affected by legislation of general application to the education districts or by the administration of the Government Departments exercising jurisdiction over education work.

A deputation from the Provisional Committee of the Education Committees of England and Wales waited upon Sir William Anson and Mr. R. L. Morant at the Board of Education (April 14) to make representations with regard to the training of teachers. It was introduced by Mr. Tudor Walters (of Leicester), the Chairman of the Conference that met the day before. The deputation urged the Board of Education to make it incumbent on Education Authorities to train pupil-teachers in numbers proportionate to the average attendance in their schools. With respect to the new regulations for the training of teachers, they asked that the old system might be continued for two years longer, so that it might run side by side with the initial efforts of the various Local Education Authorities under the new system. —Mr. Morant, on the former point, said nothing short of an Act of Parliament would suffice, and even an Act of Parliament could not produce boys and girls willing to be trained. If any practical scheme could be placed before the Board, they would be only too anxious to consider it. As it was, the Board had done all they could by means of grants to secure an increase in the supply of teachers. Mr. Walters said the deputation wanted the Board to say that each given Authority should be responsible, as far as finances were concerned, for the training of a certain number of teachers. Sir William Anson supported the views of Mr. Morant. Replying to the second representation, Mr. Morant said that it would have the Board's careful consideration, although personally he could not see that the proposed cost was altogether necessary.

The Board of Education have issued a circular to Local Education Authorities stating that they find it possible to make a considerable increase in the rates of grant in respect of pupil-teacher centres and preparatory classes fixed by the Regulations for the Instruction and Training of Pupil-Teachers, issued in July last:

The Regulations will be revised so as to provide for grants of £6 instead of £3 under Article 24, and of £4 instead of £2 under Article 25. It has been represented to the Board that the proposed new regulation, limiting admission as pupil-teachers on and after August 1, 1904, to candidates over sixteen years of age, may create a difficulty in certain localities where it is impossible to provide for the full-time instruction of intending pupil-teachers between the ages of fifteen and sixteen by so early a date as August 1 next. Where, therefore, the Board are fully satisfied that this is the case, they will be prepared to suspend the operation of the proposed new regulation until August 1, 1905; and will admit pupil-teachers between the ages of fifteen and sixteen for a three years' engagement from August 1, 1904; and pay a grant for their instruction during the first year of such engagement under Article 28 of the Regulations. Any Local Education Authority for Elementary Education desiring this special treatment for the whole or any part of their area should make an application to the Board not later than June 1, 1904.

The *Assistant Masters' Association Circular to Members* reviews the "usher's" position sixty-eight years ago.

The General Education Society, in the first year of Queen Victoria's

Digitized by Google

reign, considered among other subjects the position of resident assistant masters in private boarding schools. At this time resident assistant masters were, for the most part, of three kinds. (1) Men receiving no salary, but doing the work and superseding the services of competent and salaried teachers. In many cases these luckless drudges had to sweep out the class-rooms and perform other menial duties. (2) Men who likewise received no salary, but were awarded a small gratuity in the course of the year, which, with their board and lodging, was considered adequate remuneration for their services. "And," says our authority, "perhaps it is, for they are worth nothing." (3) Men from twenty to thirty years of age, in receipt of from £20 to £100 a year. Of these some were preparing for the University, studying in their leisure hours and saving a little money to take them there; others were looking forward to keeping a school of their own; whilst many, "men of no character whatever," says the report, "were going on from year to year, spending all they earned and learning nothing but bad habits."

At the request of the Treasury, the following gentlemen have consented to act as a Committee to consider the allocation of the proposed increased grant to the University Colleges giving education of a University standard in arts and science:—the Right Hon. R. B. Haldane, M.P. (Chairman), Sir F. Mowatt, G.C.B., Mr. C. A. Cripps, K.C., M.P., and the Rev. Dr. Woods (late President of Trinity College, Oxford). Mr. Henry Higgs, LL.B., of the Treasury, will act as Secretary.

At the Irish National Teachers' Congress held at Belfast (April 5), Mr. J. Nealon, President, in the chair, a resolution was adopted urging upon the Chief Secretary the necessity and justice of devoting the equivalent grant due to Ireland under the Irish Development Fund Act to the purposes of primary education, as had already been done with the corresponding grant in England and Scotland, especially as Irish primary education stood more in need of assistance than did the elementary system in either of the other countries. The Congress also passed a resolution stating that the incomes of Irish teachers fell short of those paid in England and Scotland, and pointing out that this disparity necessarily caused dissatisfaction and discontent, which, in the interests of education, it would be desirable to remove. A letter was read from Mr. M'Hugh, M.P., inviting the Congress to hold its next annual meeting at Sligo, and advising the delegates to claim the allocation of a substantial sum out of the Development Fund towards increasing the pay of the teachers. Any sum so allocated, he said, must directly raise the standard of primary education in Ireland, and it should be remembered that such allocation as he suggested would in no way militate against the just demand now put forward for aid for equipment, sanitation, and heating. The letter was approved. Another resolution that was passed expressed the opinion that some means should be devised to co-ordinate the systems of education in Ireland so as to enable the children of primary schools to continue their education in secondary and technical schools, and to enable pupils of exceptional ability to pass on to either Universities or colleges of science, according to the natural bent of their minds.

Mr. Max Judge, Hon. Secretary of the Central Association of University Extension Students, writes (March 26):

During the three months that the Association has been in existence—the meeting formally creating it was held on December 21 last—136 members have joined. The Committee cannot consider this number a great one, even for this introductory stage of the campaign; but this does not represent the sum of the interest which has been aroused by the work of the Association. While indirect support is encouraging, it will become doubly so when it leads to membership. Corporate membership has already been taken advantage of, and it will be gratifying when the Association can claim as its allies the many local associations and Committees engaged in kindred work in and around London; and it is hoped that further development of the fresh interest given to University Extension will lead to co-operation between the provincial associations and those in the Metropolis.

At the first general meeting of the University of London Graduates' Association (April 18), Dr. T. B. Napier in the chair, no formal report was presented by the Council, but individual members gave a *résumé* of the various steps that have been taken to preserve the work of the University as it existed before reorganization and to keep its degrees and distinctions open to all comers on terms of equality and impartiality. There are fourteen hundred members on the roll, and Mr. W. R. Warren (2 Hare Court, Temple, E.C.) will be glad to hear from graduates in sympathy with the objects of the Association.

The demand for well qualified British schoolmistresses in South Africa is reported to be continually increasing. The Education Committee of the South African Colonization Society, having supplied large numbers of teachers to all parts of South Africa, has now entered into a formal agreement with Dr. Muir, the Superintendent of Education in Cape Colony, by which the names and qualifications of suitable candidates for educational work in Cape Colony will be published in the Government *Gazette*, and all facilities afforded for heads of schools or private employers to make their requirements known to the Society through the medium of the Education Office at Capetown. Salaries in Cape Colony in State schools and State-aided schools range from £60 to £300 per annum. Teachers are required of all grades from the elementary to the most advanced secondary types. A further opportunity of introducing English teachers to the colony has been offered by the establishment of a new secondary training college at Grahamstown. The course of instruction at this college covers from one to two years, at a cost in fees and residence of £40 per annum. Government grants of from £20 to £40 are available for all duly qualified students, such as those who have passed the Senior Oxford or Cambridge Local, the First Class College of Preceptors, the London Matriculation, or some equivalent examination, or have taken a University degree. These grants, varying according to the course taken by the student, considerably reduce even the moderate rate of expenditure mentioned above. Candidates who have done well in the training college have no difficulty in obtaining posts under the Government at the conclusion of the course.

A representative and influential committee has been formed to raise a Prof. Withers Memorial Fund, with the following objects:—(1) The placing of memorial brasses in the Owens College, Manchester, and at Borough Road College, Isleworth; (2) the establishment for a term of years of a travelling scholarship abroad for third-year students at Isleworth, and the foundation of an education library in the Owens College; (3) the provision of an annual prize or lecture in connexion with some public institution. The secretary is Mr. J. H. Gettins, University College, Reading.

A pension scheme has recently been started at Bedford Grammar School, under which assistant masters will retire at the age of sixty, and will then receive an annuity of £100 or an alternative cash payment of £1,200. In the event of a master dying or leaving the school before the age of sixty, the premiums paid will be returned to him or his representatives, together with 2½ per cent. simple interest. The premiums are paid by the Governors of the Harpur Trust, and no part thereof is either contributed by the master or deducted from his salary.

Shakespeare Week has been celebrated with unusual fervour: an address by Dr. Furnivall, followed by a performance of "Much Ado about Nothing" by Mr. Poel's Elizabethan Stage Society at Burlington House (April 22); a pilgrimage through Shakespeare's London, a lecture by Mrs. Carmichael Stopes in Gray's Inn Hall, and a commemoration dinner at the Criterion (April 23); a lecture on "The Coming of Shakespeare" by Prof. Gollancz in St. James's Hall (April 24); addresses by Dr. Richard Garnett and the Rev. R. S. de Courcy Laffan at Burlington House (April 26 and 27); and a recital by Mr. J. H. Leigh at Steinway Hall, and a *conversazione* at the Passmore Edwards Settlement, Tavistock Place, when Dr. Furnivall closed the commemoration by another address (April 29). On April 22, Mr. F. R. Benson presented a fine performance of the Oresteian Trilogy of Aischylos at Stratford-on-Avon.

For the present winter course the total number of immatriculated students at the German Universities is 37,854, of whom 3,093 are foreigners, the largest number ever recorded. The number of foreign students is equivalent to 8·2 per cent. of the total number. Of these foreigners, 739 are studying philosophy, philology, or history; 722, medicine; 651, mathematics or natural sciences; 366, law; 231, political economy or forestry; 178, agriculture; 135, Evangelical theology; 32, Catholic theology; 26, dentistry; and 13, pharmacy. 2,620 of them come from European

Digitized by Google

and 473 from non-European countries. Among the former are 986 from Russia, 588 from Austria-Hungary, 318 from Switzerland, 162 from England, 64 from France, 49 from Holland, 41 from Turkey, and 43 from Italy. Of the other foreign students, 319 are from America, 133 from Asia (chiefly Japanese), 19 from Africa, and 2 from Australia. These figures, however, include only the regularly immatriculated students; to them must be added those that are enrolled as hospitants, but whose number is not given.

A CANADIAN correspondent (official) writes: "Canada's recent progress in material prosperity finds its counterpart in the record of her intellectual development during the period since confederation. This is the direct outcome of the educational system on which Canadians set such store, whose foundations were laid broad and deep in the early fifties, anticipating by some twenty years Mr. Forster's Act. At no period has literary ability been more abundant in the Dominion than at the present time, and Canadian writers and poets are rapidly building up a distinctively national literature marked by high achievement and much promise. The general pride which Canadians take in this movement is reflected in the discussions that have been going on among the school teachers' associations in Ontario in regard to the advisability of introducing Canadian poetry and literature into schools as supplementary subjects. A committee has reported favourably on the suggestion, recommending that the English-speaking schools should be supplied with copies of the works of Lampman and Roberts. In the opinion of Howells, Archibald Lampman the poet, who died two years ago, ranks with the strongest singers the New World has produced; and his work has won the highest praise in the mother country. Charles George Douglas Roberts, born in 1860, poet, story writer, and historian, is the acknowledged leader of the Canadian school of writers of to-day, and in the opinion of Mr. Goldwin Smith he is a master of English prose. Both these authors were born in Canada."

PRINCIPAL CHILDS, speaking recently at a social gathering of head teachers at University College, Reading on the future of education, said:

They would have to watch this massive fabric of organization, whether amongst themselves or elsewhere, to see that the ultimate end was not lost sight of in the clamour of tongues, and that the promise of this great movement should not be lost in the strife of parties of one set of teachers against another. They wanted to have among the teachers more sense of unity and more comradeship. They ought not to be divided into camps to the extent they had been divided in the past. They did not want to have one set of teachers called elementary, another secondary, and a third a kind of nondescript like himself. They ought to feel that they all belonged to the same profession and had the same great cause at heart. They, as teachers, had to try and increase the value of learning and scholarship in the public opinion of England. They wanted the public to pay as much respect to the man who taught, and to the man who acquired knowledge, as was paid to the man who acquired wealth or military glory. He concluded by urging the increasing importance of training their pupils in the duties and responsibilities of citizenship.

WE record with much regret the death of Sir Edwin Arnold, K.C.I.E. Sir Edwin was educated at King's School, Rochester, King's College, London, and University College, Oxford. In 1852 he gained the Newdigate Prize for his English poem on "The Feast of Belshazzar," and in 1853 he was selected to address the Earl of Derby on his installation as Chancellor of the University. Leaving Oxford with high honours, he was elected Second Master in the English Division of King Edward VI.'s School at Birmingham, and later he was appointed Principal of the Government Sanskrit College at Poona, and Fellow of the Bombay University. For more than forty years he had been a prominent member of the staff of the *Daily Telegraph*. His literary work included a volume on education in India, and a history of the administration of Lord Dalhousie; but his fame will rest on his poems, and especially on his epics—"The Light of Asia" and "The Light of the World." Sir Edwin was also an ardent sportsman and traveller.

DR. SAMUEL SMILES, the biographer of great captains of industry, the herald of "self-help," and himself a notable example of the virtue of perseverance, died in his ninety-second year.

UNIVERSITIES.

(*From our own Correspondent.*)

London. THE Senate has approved courses of study and examinations for degrees in Veterinary Science for internal and external students. The courses of study are, for the first year: Physics, Chemistry, Elementary Biology, and the Anatomy of the Domesticated Animals; second year: Anatomy, Biology, and Elementary Physiology; third year: Physiology, Elementary Pathology, and Elementary Hygiene; fourth year: Pathology and Hygiene. The examinations are, in the first year: Physics and Chemistry (up to the Preliminary Scientific standard); second year: Anatomy (Advanced) and Biology (up to the Preliminary Scientific standard); third year: Physiology (Degree standard); fourth year: Pathology and Hygiene (Degree standard). It is provided that the Examination in Physiology may, at the choice of the candidate, be postponed till the end of the fourth year, when it and the Examination in Pathology and Hygiene may be taken together.

Glasgow. THE total revenue of the University for the year from all sources, including foundations, amounted to nearly £75,000; and the expenditure on the general University account has exceeded the revenue on that account by £1,820. The University has now command of a revenue which is greater by nearly £8,800 than that of eight years ago, and £2,700 over that of the previous session. Of the latter figure £1,000 arises from increase of revenue on investments, and £1,700 from fees of students.

The late Prof. Young is to be commemorated by a bronze medallion placed in the Hunterian Museum, and by the issue of a volume of his scientific papers, &c.——Some £700 has been subscribed for a memorial to the late Prof. Hastie, but the form of commemoration is not yet settled.

An annual Commemoration Day was inaugurated (April 19). After a religious service Sir William Ramsay delivered a discourse on "Dr. Joseph Black," describing his various discoveries (especially those connected with carbonic acid gas, magnesia, caustic alkali, and fixed air), and his experiments for the determination of the latent heat of steam, which were utilized by his friend James Watt and developed by later men of science until they formed the very groundwork of the sister sciences, physics and chemistry. At the Commemoration banquet in the evening, Mr. Choate, the United States Ambassador, spoke eloquently on the influence of Universities on national policy.

Wales. AT a meeting of the Guild of Graduates of the University of Wales held at University College, Aberystwyth (April 7), the Warden (Mr. T. Marchant Williams) presiding, the recommendation of the Standing Committee that the publication of a Welsh dictionary be undertaken by the Guild was agreed to, and a committee was appointed to deal with the matter. The Warden said that the Guild had contemplated completing the Welsh dictionary of the late Chancellor Silvan Evans, but there were difficulties in the way. They had at their command, if they asked for it, £250 or £300, and he did not think there would be any difficulty in getting £400 from the Treasury to carry out the work. Dr. Williams, medical officer of health for Glamorganshire, delivered a lecture on the sanitary control of schools, in which he advocated systematic inspection of schools as to sanitary arrangements and periodical inspection by a school medical adviser, and suggested that the head teacher should be able to diagnose the cardinal symptoms of disease. Principal Reichel, of Bangor, gave an address on prominent features of the American Universities.

At a meeting of the Court of Governors of University College, Aberystwith (March 25), Principal Roberts reported that it had been decided to acquire for £2,500 Buarth Hill (ten minutes' walk from the present college buildings), primarily as the site of the Edward Davies Memorial Laboratories. They were indebted to Mr. Colby for generous terms of purchase of the land. With this and the Gwgythian land already secured through the generosity of the President of the college (Lord Rendel), they now had enough ground for the necessary present and prospective extensions of the college. Six of the seven counties associated with the college had already, through their Councils, supported the claims of the college library to be considered the national library of Wales, and the matter was still being pressed forward. On the motion of Sir John Williams,

Digitized by Google

who presided, a resolution was passed instructing the college Council to join with the sister colleges of the University of Wales in renewed efforts to obtain further financial assistance from the Government.

Manchester. The Examination for the Secondary Teachers' Diploma will be held in June, not (as in previous years) in July.

Leeds. Already nearly half the £100,000 required for the establishment of the University has been raised; and a Committee is actively engaged in finding the other half.

Sheffield. The Chairman, Treasurer, and Hon. Secretaries of the Sheffield University Fund have issued a further appeal for financial help. They point out that a University Charter is practically promised, on condition that a sum of £170,000 is obtained—so that now subscribers will know that the object to which they are subscribing is capable of realization. The subscription list stands at about £104,000; £66,000 has therefore still to be raised.

CURRENT EVENTS.

Fixtures. At the Members' Monthly Meeting of the College of Preceptors, to take place on May 18, there will be a practical demonstration of methods of teaching modern foreign languages. Mr. W. C. Brown will take a class of beginners in colloquial German, and Mr. R. J. Shanklin will give a lesson to a class on French reading. The demonstrations will be followed by discussion.

* * *

During the current term at University College, London, the following new courses will be running on Thursdays:—(1) On Idealistic Ethics (introduction), by Prof. Dawes Hicks, at 5 p.m.; (2) on the History of Modern Philosophy (Descartes to Kant), by Mr. A. Wolf, at 4 p.m.; (3) on International Law, by Prof. Sir John Macdonell, at 5 p.m.; (4) on Social Evolution in Oceania, by Dr. Haddon (Cambridge), at 4.30 p.m.; and, on Fridays, (5) a course on the History of Architectural Development, by Prof. F. M. Simpson, at 11 a.m.

* * *

Prof. Bonney will deliver during May, at University College, London, two University lectures in Advanced Geology: "Lessons from Geological Mistakes—(1) about Rocks, (2) about Ice Action."

* * *

The Eighth Annual Conference of the Parents' National Educational Union will be held in the Royal Arch Halls, Edinburgh, on May 27–31.

* * *

The University of London is arranging, in co-operation with the Teachers' Guild, a Holiday Course for Foreigners, to be held in London, July 18 to August 12. It will consist of (1) classes for conversation, elementary and advanced; (2) classes in composition, &c., advanced; (3) lectures and short courses on (*a*) English Literature and Language, (*b*) English Education, (*c*) the Universities of England, and (*d*) English Institutions. Excursions. Apply to the Director of the Holiday Course for Foreigners, University of London, South Kensington, S.W.

Honours. Sir Richard Jebb, M.P., Regius Professor of Greek in the University of Cambridge, has been elected an honorary member of the American Philosophical Society.

* * *

Lord Kelvin has been appointed Chancellor of the University of Glasgow.

Sir Richard Solomon, K.C., C.B., K.C.M.G., Legal Adviser to the Transvaal Government, has been elected an honorary Fellow of Peterhouse, Cambridge.

* * *

The jubilee of Sir Henry Roscoe's graduation at Heidelberg was celebrated (April 22) at Manchester University, Sir Henry having been a prominent figure in University teaching in Manchester from 1856 to 1886. Congratulatory addresses were presented from the Universities of Heidelberg, Cambridge, London, Manchester, Liverpool, Birmingham, the Scotch and Welsh Universities, University College (London), University of Montreal, the Colleges of Leeds, Sheffield, Newcastle, and Dundee, the Royal Society, and the British Association.

Endowments and Benefactions. Major-General Roche Forlong, Edinburgh, has bequeathed £5,000 towards the establishment of an Imperial Oriental College or School for the Study of Oriental Languages. In the event of no decided steps being taken within five years of his death, the money is to be handed over to the Royal Asiatic Society of London in trust for the general advancement of Oriental learning.

* * *

An Archibald Forbes Memorial Medal in History has been founded in the University of Aberdeen.

* * *

The late Mr. John Forbes, K.C., bequeathed £10,000 to the University of Aberdeen—contingently.

* * *

Ruskin College, Oxford, still wants some £10,000 for the erection and furnishing of new buildings, and the appeal is a most deserving one.

Two friends have given £1,000 each. The Amalgamated Society of Engineers, numbering 72,000 working-men, have made two levies of 1d. each, resulting in £600; the London Society of Compositors, numbering 11,000, have subscribed £30; the British Steel Smelters, Mill and Tinplate Workers' Association, numbering 10,000, have contributed £250; the Scottish Co-operative Wholesale Society have sent £50; these, with other smaller sums, amount to nearly £3,000.

* * *

The Twentieth Century Fund of one million guineas for the extension of Wesleyan Methodist Church work has been allocated thus:—£300,000 to the erection and enlargement of chapels, Sunday schools, manses, soldiers' and sailors' homes, &c.; £200,000 to educational work; £100,000 to foreign missions; £100,000 to home missions and temperance work; £50,000 to the Children's Home; £250,000 to a Central Hall in London.

Scholarships and Prizes. Seven Cambridge colleges will hold a combined examination for sixty-three entrance scholarships and various exhibitions on December 6 and following days. Pembroke offers two scholarships of £80, three of £60, and four of £40. Gonville and Caius: two scholarships of £80, three of £60, and five of £40. King's: two scholarships of £80, three of £60, three exhibitions of £40, and five Eton foundation scholarships. Jesus: two scholarships of £80, two of £60, and four of £40. Christ's: one scholarship of £80, three of £60, and three of £40. St. John's: three scholarships of £80, five of £60, and three of £40. Emmanuel: one scholarship of £80, three of £60, and four of £40, and two sub-sizarships. Candidates must be under 19 on October 1. Detailed information and application forms from the Masters of Gonville and Caius and of Emmanuel, Mr. W. S. Hadley (Pembroke), Mr. W. H. Macaulay (King's), Mr. A. Gray (Jesus), Rev. J. W. Cartmell (Christ's), and Dr. D. MacAlister (St. John's).

TRINITY COLLEGE, Cambridge, offers two exhibitions (£50, £30) to candidates selected at the open competitive examination for the Indian Civil Service in August next. Apply by letter to the Senior Tutor before September 1.

* * *

A SCHOLARSHIP of £25 a year for two years will be offered by the Society of Oxford Home Students in March, 1905, open to candidates requiring pecuniary aid, either being Oxford Home students of not more than two terms' standing or intending to become Oxford Home students.

* * *

IT is proposed to found at Oxford a scholarship for the advancement of Oriental study in commemoration of the late Sir Edwin Arnold.

* * *

THE Manchester Education Committee increases its scholarship scheme from £3,670 to somewhere between £8,000 and £9,000, with a view to improving the educational ladder.

Appointments and Vacancies.

THE REV. STUART A. DONALDSON, M.A., assistant master at Eton (since 1878), has been appointed Master of Magdalene College, Cambridge.

* * *

DR. J. A. EWING, Director of Naval Education, sometime Professor of Mechanism and Applied Mechanics in the University of Cambridge, has been appointed Rede Lecturer for the present year.

* * *

DR. HENRY H. DIXON, who has been assistant to Prof. Wright since 1892, succeeds him as Professor of Botany in Trinity College, Dublin.

* * *

THE REV. PROF. LAIDLAW, D.D., has intimated his intention of resigning the Chair of Systematic Theology in the New College, Edinburgh, which he has held since 1881.

* * *

AT Manchester University, Mr. Siegmund Moritz, M.D. (Würzburg), M.R.C.P. (Lond.), has been appointed Lecturer on Diseases of the Larynx; Mr. William Woods, F.R.C.V.S., to be Lecturer on Veterinary Hygiene; and Mr. H. Thiselton Mark, B.A., B.Sc., Master of Method in the Day Training College, to be University Lecturer in Education.

* * *

SIR HENRY CRAIK, K.C.B., LL.D., will shortly retire from the Secretaryship of the Scottish Education Department, after nineteen years' service. The Department is to be permanently represented in Edinburgh.

* * *

THE Board of Education has appointed, as Staff Inspectors of Secondary Schools, Mr. J. W. Headlam, M.A., King's College, Cambridge; Dr. R. P. Scott, M.A., LL.D., Head Master of Parmiter's School, London; and Dr. Frederick Spencer, M.A., LL.D., Rector of the High School, Glasgow.

* * *

MR. HORACE E. MANN, M.A., Secretary to the Academic Registrar, London University, has been appointed a Junior Examiner under the Board of Education.

* * *

THE REV. P. CARNEGIE SIMPSON, M.A., United Free Church, Renfield, Glasgow, has been appointed Principal of the Presbyterian College, Montreal.

* * *

THE REV. W. E. BLOMFIELD, B.A., B.D., pastor of Queen's Road Chapel, Coventry, has been appointed Principal of Rawdon Baptist College, Leeds.

* * *

MR. PERCY LONGMUIR, of University College, Sheffield, has been appointed junior assistant in the Metallurgical Department of the National Physical Laboratory.

* * *

MR. JOHN MACLENNAN, M.A., Rector of Elgin Academy, has been appointed Rector and classical master of Dundee High School.

* * *

MR. O. F. KIRBY, M.A., science master at Elgin Academy, has been appointed a chemistry master in the Leeds Boys' Modern School in connexion with the Leeds Institute of Science, Art, and Literature.

* * *

MISS PHILLIMORE, Head Mistress of the York High School of the Girls' Public Day School Company, has been appointed Head Mistress of the Brighton and Hove High School, in succession to Miss Mayhew; and

MISS C. L. PRIMROSE, assistant mistress in the Dulwich High School, has been appointed Head Mistress of the York High School.

Literary Items.

THE Clarendon Press will issue in autumn the first of two volumes of selections from the minor poetry of the times of Charles I. and Charles II., prepared by Prof. Saintsbury, who furnishes a general introduction. Each group of poems will have its necessary introduction and notes. Many of the minor poets are of historical as well as literary interest, and editions of their works are mostly scarce.

* * *

MR. FROWDE will presently publish an edition of More's "Utopia," with introduction and notes, philological, historical, and philosophical, by Mr. J. Churton Collins, M.A.

* * *

MESSRS. METHUEN will issue shortly, in their "Standard Library," a three-volume edition of Carlyle's "Life and Letters of Oliver Cromwell." The introduction is by Mr. C. H. Firth, and notes and appendices by Mrs. S. C. Lomas.

* * *

THE next two volumes in the thin-paper reissue of Mr. Fisher Unwin's "Mermaid Series" will be "The Best Plays of Beaumont and Fletcher," with introduction and notes by Mr. J. St. Loe Strachey.

* * *

MR. FISHER UNWIN is publishing a new volume by Mrs. Brightwen—"Quiet Hours with Nature"; and a timely book by Miss Augusta M. Campbell Davidson on "Present-Day Japan."

* * *

MESSRS. CONSTABLE promise an English edition of an important work by M. Alexandre Ular, an accomplished sinologist, entitled "A Russo-Chinese Empire," based on a prolonged study of facts on the spot.

* * *

A NEW edition of the late Prof. Bain's "Higher English Grammar" is in the press. The chapter on the growth of the language has been largely rewritten by Mr. Alexander Mackie, M.A., in accordance with latest lights in philology.

* * *

THE interest in the approaching publication of Lord Acton's lectures and essays is whetted by Mr. John Pollock's charming article on "Lord Acton at Cambridge" in the *Independent Review* for April—an eulogistic sketch that will accentuate the puzzlement of outsiders over Lord Acton's esoteric reputation.

* * *

MESSRS. WILLIAMS & NORGATE'S *International Book Circular*, No. 138, is a "Herbert Spencer number," with an appreciation of Spencer's work by Mr. W. H. Hudson (late a private secretary to the philosopher) and a recent portrait.

Digitized by Google

THE important series of Manuals and Class-books in Oriental languages (over a hundred volumes) formerly published by Messrs. W. H. Allen & Co., and in more recent years by Messrs. Sampson Low, Marston, & Co., have now been acquired or taken over by Messrs. Crosby Lockwood & Son.

* * *

THE *Commercial College Chronicle*, edited by Dr. A. L. Stange, Munich (10s. a year, Williams & Norgate), which made its first monthly appearance in English in January, is an international review containing information about the principal Universities and commercial colleges of Europe and America. The February number gives a pretty full description of the London School of Economics and Political Science.

General.

MESSRS. JOHN BROADWOOD & SONS have devised "a scheme by which any school authority can obtain the best possible instruments" for use in elementary and secondary schools "on terms which practically relieve the ratepayers of everything but a nominal cost."

* * *

ARRANGEMENTS are practically concluded whereby Principal Owen Williams, of the New Veterinary College, Edinburgh, and President of the Royal College of Veterinary Surgeons, will go to Liverpool as the Head of a new Faculty of Veterinary Medicine in connexion with the University of that city and with the School of Tropical Medicine. This virtually means the transfer of the New Veterinary College from Edinburgh to Liverpool.

* * *

AT the City of London College a presentation was made (April 23) to Dr. Cusack, in celebration of the twenty-fifth anniversary of the founding of the institution, which trains pupil-teachers for King's Scholarships and Certificate Examinations. Mr. Graves, in making the presentation, mentioned that when Dr. Cusack started, twenty-five years ago, he had only five pupils: and now he has over five thousand.

* * *

A MEMORIAL BUST of the late Marquis of Bute in the robes of the Lord Rector of the University of St. Andrews, by Mr. Pittendreigh Gillivray, R.S.A., was unveiled (March 28) in the vestibule of the Bute Medical Buildings, St. Andrews.

* * *

MULGRAVE CASTLE SCHOOL, near Whitby, which has been conducted for the past dozen years by the Marquis of Normanby, Canon of Windsor, has been closed (April 5).

* * *

A REUTER TELEGRAM from Montreal says: "The Board of Trade has decided to take steps to second the proposal of the London Chamber of Commerce to organize tours throughout Canada for English University graduates, as moved at the Congress of Chambers of Commerce held here last summer."

MANUAL TRAINING.

ITS PSYCHOLOGICAL IMPORTANCE.

IN a recent address on the psychological importance of manual training, Sir John A. Cockburn, M.D., K.C.M.G., said:

It is the high mission of manual training teachers to remove the common reproach that the school does not prepare for real life, and that dull boys at school are often found to make the most capable men. Education must of necessity be for the future; cannot afford to indulge in idolatry of the past; but, until recently, the dead hand of the Middle Ages has been heavy on the young life of the school. In a progressive age adjustment is necessary to prevent dislocation between the preparation for living and the actual requirements of life. In our own times construction is the key-note which rings through all activity, even up to the organization of Empire. Everywhere is manifest the need of interdependence and increased relationship. Manual training is therefore specially appropriate; for it is pre-eminent in developing constructive ability and the faculty of keeping in touch with environment. Twenty years ago manual training was advocated chiefly to develop dexterity of the hand and to predispose to useful callings. It does all this and much more. The pioneers builded better than they knew. It is now recognized that the hand is one of the best channels to the intelligence, and that in training the hand we minister most effectually to the requirements of intellectual and moral as well as of physical development. Rousseau recognized this when he wrote: "If instead of chaining a child to his books I occupy him in a workshop, his hands labour to the profit of his spirit: he becomes a philosopher, though he thinks he is only a workman." Time in giving intellectual studies would be saved if half the school hours were spent in the workshop. Even literature is imperfectly apprehended by those whose knowledge is confined to books. Every language teems with innumerable metaphors derived from manual processes and such expressions as "weld," "clinch," "against the grain" are tame at second hand. In a recent review of Herbert Spencer's works the strength and aptness of his style were attributed to his practical training as an engineer. Pupils detect their errors in actual work more readily than in abstract processes, and learn to despise inaccuracy and slovenliness. Nothing so clearly demonstrates the difference between right and wrong as manual training. A lie in wood stands self-exposed. Volition springs from muscular movement, actual or ideal, and the will consists largely in a firm control of the muscles. Moreover, attention is at root a muscular process: the constructive imagination is strengthened and invention is stimulated by manual work. The tendency of thought to inhibit action is thereby connected, and the blessing of an active temperament secured. It is well known that the prizes of life fall to men of action. Psychologists are agreed that by the sheer force of its value in developing the mind manual training must take definite rank as an indispensable element in all primary and secondary schools which have any claim to efficiency. It is a necessity for general culture. . . . Montaigne says: "For it is not a mind, it is not a body, that we erect; but it is a man, and we must not make two parts of him"; and Milton protested that the dictum of separation was at variance with both Nature and reason. Like every true reform, manual training is a harking back to old principles, and here, as elsewhere, we must go to ancient Greece for up-to-date wisdom. Empedocles (450 B.C.) called the hand the best highway of persuasion into the mind of man.

THE SCOTTISH EDUCATION BILL.

VIEWS OF THE SECONDARY TEACHERS.

THE Association of Teachers in the Secondary Schools of Scotland, in a memorandum addressed to the Secretary for Scotland by the General Committee, records its high appreciation of the service which has been rendered to education in Scotland by the Government, and especially by the Secretary for Scotland, in framing the Education Bill. With the principles and main provisions of the Bill the Committee is in hearty agreement. In particular it welcomes the proposal to establish Provincial Councils for education. It believes that such Provincial Councils—or better still, one National Council—will contribute in a very marked degree to the development of a truly national system of education in Scotland. There are, nevertheless, in the opinion of the Committee, some respects in which the Bill may by amendment be improved, and to the following suggested amendments the attention of the Secretary for Scotland is directed:—

In Part I.—Constitution and Election of School Board—it is suggested that the new Authority should be called the "School Council." It seems desirable to mark the greatly extended scope of the functions of the new governing body by assimilating its name to that of the other local governing bodies.

In Part II.—Powers of School Board—it is suggested in Section 2 (), line 41, that after "school" should be inserted "other than secondary or technical schools." To entrust such schools to the local managers designated in the Bill would be injurious to the interests of these schools, and inconsistent with their position as schools serving the educational needs of the whole district. Also a sub-section should be added to this effect: "In the case of secondary or technical schools in education districts other than the enumerated districts, it shall be lawful for the School Board to delegate such of their powers in connexion with the management of such school as they may see fit to managers appointed by them. In Section 21, line 26, after "schools," "other than secondary or technical schools" should be added. In Section 25 (1)—"But in the case of loans contracted for the purpose of providing secondary or technical schools, the burdens thus created shall be transferred to the School Board of the district in which such secondary or technical school is situated" should be added. It must be remembered that such schools usually supply a district, and that hitherto the parishes surrounding the burghs in which they are situated have borne none of the expense thereby entailed. In Section 30, after "play ground," "or recreation ground" should be added. It is very important that School Boards shall have power to provide and maintain playing fields and their appurtenances. In Section 31 (3), it should be made clear that, among the conditions on which such grants may so be made, there

Digitized by Google

should be included the right of the School Board to demand representation on the governing body of the school to which the grant is made. Section 31 (6) should read: "In paying pension and retiring allowances to teachers in their employment, (*a*) in secondary and technical schools, and (*b*) as in the sub-section." A very large proportion of the teachers in secondary and technical schools are not certificated. Their existing customary rights to pensions should be safeguarded. Section 32, line 11, should read: "or of appointing, promoting, or dismissing teachers."

In Part III.—Education (Scotland) Fund—Section 39 should read: "That all moneys granted to schools in an education district under this section should be allocated by the School Board, except in the case of the central institutions referred to in Sub-Section 3 (*a*)." Unless such a method of distribution be adopted, it will not be possible for the School Board to effectively correlate all the education, elementary, secondary, and technical, within its district. As to Section 39 (4), this mode of distribution of money is unsatisfactory, inasmuch as the fluctuation of income may injuriously affect the administration of the schools. The following remarks are added:—Page 17, line 11: That if page 18. lines 26–32, is the definition of "higher education" promised, it is not sufficiently definite. Page 17, line 21, read: "in schools which come under this Act."

As to Part IV.—Provincial Councils for Education—the memorandum says: "While this Association welcomes the proposal to establish Provincial Councils, it is convinced that a single National Council would be much more effective. That on this National Council or on the Provincial Councils the teaching profession should be more largely represented than is proposed in the Bill, and that this Association, as representing the secondary teachers of Scotland, should have representation. That the University representation is excessive, more especially as the Universities are not dealt with in the Bill. That the National Council or the Provincial Councils should be consulted in the framing of all codes, minutes, or circulars."

COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on April 23. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Butler, Prof. Adams, Mr. Armitage Smith, Mr. Barlet, Mr. Baumann, Rev. J. B. Blomfield, Miss Crookshank, Mr. Easterbrook, Mr. Eve, Mr. Holland, Mr. Kelland, Mr. Millar Inglis, Mr. Pinches, Miss Punnett, Mr. Rule, Rev. Dr. Scott, Mr. Storr, and Rev. J. Twentyman.

The minutes of the last meeting were read and confirmed.

The diploma of Associate was granted to Mr. James Denton, who had passed the required examination.

The Report of the Examination Committee was adopted.

The Report of the Finance Committee was adopted.

Mr. A. P. Starbuck, B.A., St. John's College, Green Lanes, N., was elected a member of the Council, in the place of Mr. W. H. Harris, resigned.

The following persons were elected members of the College:—

Mr. W. J. Andrews, L.C.P., 58 Pasley Street East, Stoke, Devonport.
Miss M. E. Bailey, A.C.P., Clifton Lodge School, Fleetwood.
Miss M. M. Batterbury, A.C.P., Wellington College, Hastings.
Mr. J. Birch, A.C.P., Clifton, Newlyn, Penzance.
Mr. P. S. R. Bridge, M.A. Oxon, L.C.P., Rosary Cottage, Old Hall, Ware.
Mr. A. E. E. Cook, B.A. Lond., A.C.P., Editha, Linden Gardens, Leatherhead.
Mr. A. Haysman, A.C.P., 329 Finchley Road, Hampstead, N.W.
Miss E. Keen, A.C.P., Fairfield House, East Dereham, Norfolk.
Rev. J. J. Milne, M.A. Camb., Glengarry, Lee-on-the-Solent, Hants.
Mr. S. Slefrig, B.Sc. Victoria, A.C.P., Grammar School, Gillingham, Dorset.
Miss. E. M. Smith, A.C.P., c.o. Miss Yates, Bryntirion, Shrewsbury.
Miss G. E. Stalley, L.C.P., Central Foundation School, Spital Square, E.
Mr. J. A. S. Wilson, M.A. Edin., L.C.P., 88 Leander Road, Brixton, S.W.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHOR.—De Saint Joseph's Cien Lecturas y Conversaciones selectas de Autores modernos franceses, and Curso completo de Idioma Inglés.

By A. & C. BLACK.—Black's Elementary Geography Reader No. VB. (Asia); History in Biography, Vol. I.; "Sir Walter Scott" Continuous Reader (Rob Roy); Finnemore's Social Life in England, Vol. II.; Herbertson's Descriptive Geography from Original Sources (Australia and Oceania); Kirkman's Frazer's Contes des Chevaliers, and Ninet's Trois Récits de Froissart.

By W. B. CLIVE.—Watt's Selections from Bacon's Essays.

By G. BELL & SONS.—Scott's Woodstock (Bell's Reading Books).

By HACHETTE & Co.—Duchemin's De Musset's On ne badine pas avec l'Amour; Smith's English Colloquialisms with their French Equivalents.

By MACMILLAN & Co., LTD.—Notes to Palgrave's Golden Treasury of Songs and Lyrics; Jennings's English Poems, Parts I. and II.

By RELFE BROS., LTD.—Perry's Local Examination Physiography.

Supplement to R.U.I. Calendar for 1904.

Medical and Dentists' Registers, 1904.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,147,020. Annual Income, £400,381.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

MACMILLAN AND CO.'S LIST.

THE MAKING OF ENGLISH.

By HENRY BRADLEY, M.A., Ph.D., sometime President of the Philological Society. Globe 8vo, 4s. 6d.

WESTMINSTER GAZETTE.—"A book that is full of varied interest and exceedingly rich in suggestion. Here is, in fact, a volume that must charm and stimulate everybody who, without being a student of philology, is interested in the history and evolution of his mother-tongue."

New Works on Geometry to meet the New Requirements.

A SCHOOL GEOMETRY.

By **H. S. HALL, M.A.**, and **F. H. STEVENS, M.A.** Crown 8vo.

PARTS I. and II.—PART I. Lines and Angles, Rectilineal Figures. PART II. Areas of Rectilineal Figures (containing the substance of Euclid, Book I.). 1s. 6d.

PART III.—Circles (containing the substance of Euclid, Book III., 1-34, and Part of Book IV.). 1s.

PARTS I., II., and III. 2s. 6d.

PART IV.—Squares and Rectangles, Geometrical Equivalents of certain Algebraical Formulæ (containing the substance of Euclid, Book II. and Book III., Props. 35-37). Sewed, 6d.

PARTS I.-IV. 3s.

PARTS III. and IV.—Containing the Substance of Euclid, Books II. and III. and Part of Book IV. 1s. 6d.

PART V.—Containing the substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d.

PARTS I.-V.—4s. 6d.

PARTS IV. and V.—Containing the substance of Euclid, Book II., Book III., 35-37, and Book VI. 2s.

PART VI.—Containing the substance of Euclid, Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures. [*In preparation.*

*** This Work is based upon the recommendations of the Mathematical Association.

ROYAL COLLEGE OF SCIENCE MAGAZINE.—"The book certainly maintains the high reputation of the authors' mathematical works, and we feel sure even the upholders of Euclid will welcome this rival."

A NEW GEOMETRY FOR SCHOOLS. By S. BARNARD, M.A., Assistant Master at Rugby School, Late Fellow and Lecturer at Emmanuel College, Cambridge; and J. M. CHILD, B.A. Cantab., Lecturer in Mathematics, Technical College, Derby. Crown 8vo, 4s. 6d.

TEACHER.—"An admirable book which deserves, and undoubtedly will receive high commendation from teachers."

A NEW GEOMETRY FOR JUNIOR FORMS. By S. BARNARD, M.A., and J. M. CHILD, B.A. Cantab. Crown 8vo, 2s. 6d.

*** This Volume contains all the Practical and Theoretical Geometry required for a Pass by Junior Candidates in the University Locals.

NATURE.—"The work is simple, very thorough, and in every way suited to the requirements of junior students."

THEORETICAL GEOMETRY FOR BEGINNERS. By C. H. ALLCOCK, Senior Mathematical Master at Eton. Parts I., II., and III. Globe 8vo, 1s. 6d. each. Part IV. [*In the press.*]

NATURE.—"For those who do not wish to be tied to Euclid's sequence, and yet who desire to retain a strictly deductive system, the book will be found eminently suited. It is well written and beautifully printed."

PRACTICAL EXERCISES IN GEOMETRY. By W. D. EGGAR, M.A., Assistant Master at Eton College. Globe 8vo, 2s. 6d.

TEACHER.—"As an introduction to the study of theoretical geometry, while also affording a training in itself, nothing could be better. The scheme of the book is excellent, and it is well carried out."

CHEAPER IMPRESSION NOW READY.

HIGHER ARITHMETIC AND ELEMENTARY MENSURATION, for the Senior Classes of Schools and Candidates preparing for Public Examinations. By P. GOYEN, F.L.S., Inspector of Schools, New Zealand. Crown 8vo, 3s. 6d.

NEW IMPRESSION NOW READY.

PIONEERS OF SCIENCE. By Sir OLIVER LODGE, F.R.S., Principal of the Birmingham University. With Portraits and Illustrations. Crown 8vo, 6s.

THE PHILOSOPHY OF EDUCATION. Being the Foundations of Education in the Related Natural and Mental Sciences. By HERMAN H. HORNE, Ph.D. Crown 8vo, 7s. 6d. net.

MACMILLAN & CO., LIMITED, ST. MARTIN'S STREET, LONDON, W.C.

NATURE STUDY.

CASSELL'S "Eyes and No Eyes" Series.

BY ARABELLA B. BUCKLEY (Mrs. FISHER).

Each Book is complete in itself, and contains 8 Coloured Plates and numerous Illustrations.

Book	Limp cloth,	Book	Limp cloth,
I. Wild Life in Woods and Fields	4d.	IV. Birds of the Air	6d.
II. By Pond and River	4d.	V. Trees and Shrubs ...	6d.
III. Plant Life in Field and Garden	6d.	VI. Insect Life	6d.

Head Teachers are invited to apply for Specimen Copies.

Cassell's "Eyes and No Eyes" is also published in One Volume, cloth gilt, with gilt edges, price **3s. 6d.**

IDEAL SCHOOL DECORATION.

CASSELL'S "Wild Flowers" Sheets.

Each Sheet is mounted on board, with cord suspender, and contains **Ten Examples of Familiar Wild Flowers,** beautifully reproduced in Colours and Varnished.

TWELVE SHEETS, PRICE **1s. 6d.** EACH.

Special Prospectus will be sent post free on application.

CASSELL & COMPANY, LTD., LA BELLE SAUVAGE, LONDON, E.C.

UNRIVALLED DICTIONARIES.

CASSELL'S NEW FRENCH DICTIONARY. (FRENCH-ENGLISH—ENGLISH-FRENCH.) Edited by JAMES BOIELLE, B.A., Officier d'Académie; sometime Examiner in the University of London. 1,220 pp., demy 8vo, strongly bound in cloth, 7s. 6d.; or in half-leather, 10s. 6d.

CASSELL'S FRENCH DICTIONARY. (FRENCH-ENGLISH—ENGLISH-FRENCH.) 696th Thousand. Revised and Corrected. 1,150 pp., cloth, 3s. 6d.; half-morocco, 5s.

CASSELL'S GERMAN DICTIONARY. (GERMAN-ENGLISH — ENGLISH-GERMAN.) 317th Thousand. 1,120 pp. *Cheap Edition.* Cloth, 3s. 6d.; half-morocco, 5s.

CASSELL'S LATIN DICTIONARY. (LATIN-ENGLISH—ENGLISH-LATIN.) 142nd Thousand. *Cheap Edition.* 3s. 6d.; half-morocco, 5s.

CASSELL & COMPANY, LTD., LA BELLE SAUVAGE, LONDON, E.C.

NEW SCHOOL BOOKS.

TREASURE ISLAND, Cassell's School Edition of. By R. L. STEVENSON. Unabridged. Illustrated. 292 pp., cloth, 1s. 6d.

KING SOLOMON'S MINES. By H. RIDER HAGGARD. Abridged School Edition. 253 pp. Illustrated. Cloth, 1s. 3d.

ROBINSON CRUSOE, Cassell's School Edition of. With numerous Illustrations by WALTER PAGET. 256 pp., cloth, 1s. 3d.

THE GREEK HEROES: Stories translated from NIEBUHR, with Additions. With 4 Coloured Plates and numerous Illustrations. Bound in limp cloth, 6d.; or in cloth, gilt top, 1s.

FAIRY TALES FROM FAR AND NEAR. Retold by "Q" (A. T. QUILLER-COUCH). With Illustrations by H. R. MILLAR. Cloth, 1s. 3d.

BOOKS FOR INFANTS.

Each Work consists of about 100 pp., handsomely printed in large type, Illustrated with Coloured Plates.

CASSELL'S ÆSOP'S FABLES. In Words of One Syllable. With 4 Coloured Plates and numerous Illustrations in the Text. 6d.

CASSELL'S SWISS FAMILY ROBINSON. In Words of One Syllable. With 4 Coloured Plates. 6d.

Head Teachers are invited to apply for Specimen Copies.
Cassell's Educational Catalogue will be sent post free on application.

HOW TO BE INTERESTING IN TEACHING.

Address by Professor Adams.

At the Evening Meeting of the members of the College of Preceptors on April 20, Mr. H. C. Bowen in the Chair, Prof. Adams, of the University of London, read the following paper:—

Nature has seen to it that certain things shall immediately and invariably excite our interest. Loud sounds, bright colours, pungent odours, all attract our attention without any effort. These are sometimes called "grosser interests," because they appeal to the self in a very marked way. Anything connected with our appetites interests us whether we will or no. This, after all, is not a matter for which we should feel called upon to apologize. It is Nature's provision to ensure that we shall attend to certain matters that she knows to be of primary importance to our well-being. Further, it must not be forgotten that it is impossible for us ever to get beyond this self-reference in interest. From its very nature, all interest is self-referent, however altruistic the interested person may be. To say that I am interested in a thing is only another way of saying that that thing in some way or other *affects* me. Even etymologically the word means a state of affairs in which one thing affects another, in which some thing matters to another. The first step then in arousing a person's interest in any matter is to bring that matter into relation with the person.

When we say that a highly coloured sweetmeat is more interesting to a child than is a spelling book, we discriminate between an interest that is caused by a provision of Nature and one that, where it exists at all, is the result of deliberate effort on the part of somebody, though the success of this effort depends ultimately upon a state of things for which Nature is responsible. Obviously we can never get beyond Nature. It is because a boy is what he is that he is interested in plum-pudding, and it is for precisely the same reason that he is interested in postage stamps. The fact that the latter interest is of later development and implies certain external stimulants, in no way alters the fact that each interest is aroused by bringing into contact with the boy-*ego* certain things for which that *ego* has a more or less direct affinity.

The degree of directness with which matters appeal to the *ego* introduces difficulties in the way of cultivating certain interests as compared with others. But the process of forming the connexion is the same in all cases. When we say that cricket is more interesting to a boy than is Latin we are not talking quite accurately. What we mean is that it is more easy to rouse interest in the game than in the language. As a matter of fact, many boys are equally interested in both, while there is a minority that actually have more interest in Latin.

When we hear, as we sometimes do, that it is impossible to arouse the interest of certain people in certain subjects, all that we are called upon to believe is that immediate interest cannot be aroused in a given subject at a given stage. Sir George Stokes, of Cambridge, gave, on one occasion, a course of six lectures on Light, in the University of Aberdeen. The first lecture was attended by a few hundreds, the last by a few units. It was found impossible to interest the audience because the learned lecturer was enunciating original views that demanded an amount of previous knowledge that his audience did not possess. If Sir George's purpose had been to interest a large audience, he would have begun with the elements of his subject and worked gradually upwards. In other words, he would have respected the self-referent impulses of his hearers.

Start from the Pupil's Point of View.

The first principle, then, in seeking to make our teaching interesting is to start in every case from the pupil's point of view. I have no doubt Sir G. Stokes would have been very indignant if he had been asked to adopt the point of view of the plain man. But it was not essential that he should be interesting to all. To the teacher it is of the first importance; for, if the pupil is

Digitized by Google

not interested *in his work*, nothing else really matters. It goes without saying that the words on which I have laid stress in the last sentence are of the essence of the matter. It is not difficult to arouse the interest of the pupils in matters outside their work. Teachers can easily become interesting by telling funny stories, or by making flamboyant but uninstructive experiments; but, unless the interest is in the work as such, it is worse than useless. It is a force against, not for, the teacher's true aims.

In dealing with the pupil's point of view, let us consider the social bore and learn of him. Why is he a bore? Is it not because he persists in speaking of things that interest himself, whether they happen to interest others or not? Whatever remark you make, he replies in terms of his own experience and with no reference to yours. Mrs. Hugh Bell has a very clever little book on "Conversational Openings," in which the beginnings of society conversations are treated as the openings of games are in the chess text-books. Each conversation is treated as a game, in which victory is secured by the person who can direct the talk to subjects in which he is interested. In society a man may legitimately fight the battle of his interests for his own enjoyment; but, after all, it has to be remembered that what is success to the victor is boredom to the vanquished. Mrs. Bell's successful conversationalist is, by the very conditions of the case, a triumphant bore.

Don't be a Bore.

In school we not only may—we must—fight for our interests. I wonder if it is too hard a saying that many teachers gain their victory at the same expense as the social conqueror. Is it not true that we are all tempted to secure an easy victory for our subjects, and thus become bores to our helpless pupils? Our position is not exactly that of the bore in society. If he desires to be a pleasant person, all he has to do is to sacrifice the subjects in which he is interested and talk of what the other person is eager about. This is only changing the incidence of boredom, and, if that were all, the teacher might very naturally be called upon to make the necessary sacrifice. But the subjects in school are parts of the condition of the problem. These subjects must be the staple of conversation; and yet the pupils are not to be bored. It is the teacher's business to seek about till he finds some point of connexion between the present content of the pupil's mind and the matter he wishes to teach. However remote this connexion may be, it must be used, as there is no other way in which the new matter can be really assimilated with the old. To be interesting, from this point of view, is equivalent to being able to teach at all. How can I get the pupil to regard the matter I want to teach him? is the first question that the teacher must face before he even begins to teach. Only by adopting the point of view of the pupil can the teacher lead the pupil to deal successfully with any subject.

Find the nearest Point of Contact.

Naturally, the wise teacher will seek the nearest point of contact between the present content of the pupil's mind and the matter about to be introduced. Further, he will select a point of contact that involves a real causal relation with the essential points of the subject in hand. There are probably many mere extrinsic links of connexion between the pupil's present knowledge and the subjects to be taught, but these must give way to matters that form an integral part of the system of things with which the subject is connected.

Relate New Facts with the Pupil's Old Facts.

Hence arises the second principle in the art of being interesting. Not only must we approach the subject from the pupil's point of view, but we must prepare a place for the new fact among the facts already within the pupil's knowledge. When young teachers are asked how they propose to interest their pupils they give two distinct kinds of answer. The more commonplace students say that to keep a class interested it is necessary to keep on supplying new facts; give them something fresh every lesson, and there will be no lack of interest. More thoughtful students go a step further back, and say that a class is never so much interested as when dealing with things that are familiar. Each answer contains enough truth to save it from being altogether condemned, but neither can stand by itself; not the entirely new nor the altogether familiar is interesting. No doubt we have intellectual Athens, whose citizens "spent their time in nothing else but either to tell or to hear some new thing." On the other hand, we are all familiar with the person who has no sympathy with anything that is not familiar to him —"The old is pleasant to the old."

But an absolutely new thing has no interest for us. Indeed, the very word "absolutely" shows this. We can have no relation with it whatever if it be absolutely new; for, if we do find that we have some means of relating the new fact to our past experience, it is clearly not absolutely new. Suppose I utter four words that are unfamiliar to you: they will fall naturally into different classes, according to the way in which you seek to bring them into relation with your present knowledge. Take the words "aprosexia," "grangerise," "cheeselep," "lazy-tongs." The first word you probably do not know, and, indeed, find it difficult to separate the sounds of which it is made up; the second either conveys its meaning at once from previous knowledge or passes through the mind without leaving any trace whatever; the third probably suggests something about a dairy or cookery or larders, though there is nothing definite about the meaning; the fourth either calls up a perfect picture of the instrument or it raises a problem of which two of the terms are familiar, but related to one another in a way that is obscure.

These words probably have roused a certain amount of interest in your minds as they have been used here; but this interest does not lie in the words themselves, but in the connexion in which they are used. Isolated every such meaningless term has no interest for us, save the interest attaching to the question "What does it mean?"—a question that, as you see, really is equivalent to "What relation has the expression to the rest of the content of my mind?" If we are ever to learn anything new, we must have this irreducible surd of interest. One single unknown thing or term rouses our curiosity because it stands out against all the known and demands explanation. But a series or group of such unknowns daunts us. Savages are not so much interested as distressed by the wonders of civilization. They cannot take them in. "There are too many people, too many houses, too many of everything. We are tired of it all."

Habit is Fatal to Interest.

There is a similar failure of interest in the perfectly familiar. The formation of habit is fatal to interest. We are not interested in our habitual duties or functions; and, though we resent interference with them, it is the resentment that causes the interest, not the interest the resentment. The club veteran is not really interested in the chair he has sat in for the past forty years—but he is at once greatly interested when he finds some ignorant new member sitting in it. Put shortly, the matter may be stated: The old has exhausted all its interest, while the new has not yet acquired any. It is the new in an old setting, or the old in a new setting, that rouses interest.

Revive Related Ideas.

If a fact is to be presented in a particular context, it is always well to revive all the related ideas, so that they may form a suitable setting for the new fact. If a connexion can be established between the old facts and the new, there is interest aroused. If this connexion comes with more or less of a shock of surprise, the interest is increased. From this point of view, interest may be described as the hedonic tone accompanying mental assimilation.

Present Facts suggestively.

It is sometimes possible to carry the preparation further, and not only have the ideas gathered together in such a way as to give the new idea a welcome, but so to work upon them that there arises a positive desire for the coming fact. Facts may be so presented to the mind as to make it clamorous for another fact to complete a combination.

Even such simple devices as the notice on the front board of the sandwich man: "Don't look at my back," are successful in creating a vacuum that the mind insists upon filling. Human nature acts like the rest of Nature when brought face to face with a vacuum. When the teacher has brought his class to the point of wanting to know certain things he has made a good use of interest.

It is not always either necessary or desirable that the teacher should indicate to the pupils what he desires them to be interested in. What he has to do is to present his facts in such a way that they shall inevitably arouse interest of a certain kind. The teacher who is always explaining, always talking, invariably has to account for a great leakage of interest. The enthymeme is a logical form the full meaning of which has not yet been realized by many teachers. The homely phrase "putting two and two together" represents a process of the first importance in the use and cultivation of interest. To feed a class with premisses and to leave to it the easy work of supplying conclusions is an

Digitized by Google

excellent way of arousing interest. Even if there be no real thought involved, there is distinct advantage in any way of presenting truth that ensures that the pupil shall assimilate it. "Why not tell him the conclusion, since it is already implied in the premisses?" is a question that betrays a misconception of the place of co-operation in teaching. It *does* matter whether the fact is stated baldly by the teacher or deduced with pikestaff directness from materials supplied. It may be a poor thing, but it is the pupil's own, and is held by him in a totally different way from that in which he holds facts given him directly.

Interest as Self-activity.

Interest is in its very nature active. It implies a certain satisfaction in contemplating what is brought before the mind; but along with this satisfaction is the desire for a more extended field. There is always a purpose to be served where there is interest. This purpose may rest content with fulfilment on the ideational plane, or may seek an outlet in real life; but from the point of view of interest the difference is immaterial.

The activity that marks interest is self-activity. A child is always most interested in what he himself does. Accordingly, one of the most important principles in making our teaching interesting is to throw as much work as possible on the pupils. It is so easy for the teacher to make the blunder of applying the laws of interest to his own case, and of mistaking the glow of satisfaction he feels after doing a bit of teaching, for an indication that his pupils are interested. Teachers cannot be too frequently reminded that not what they do is important, but what their pupils do. The test must always be applied to the pupils, not to the teacher.

"The Essence of Feeling Interested."

As a rule, the less prominent the teacher makes himself in the teaching process the more interested the pupils become, because the more is left for them to do. At first sight, this may seem a plausible argument in favour of lazy teachers. But in order that the pupils shall do most of the work during the lesson hour the teacher must do most of the work before the lesson hour. The essence of feeling interested is the sensation of working from one's own initiative. Now it appears that we are here face to face with two irreconcilable positions. The teacher must so arrange the work that the pupils cannot but act in a particular way. Yet the pupils must be allowed to follow their own initiative. The explanation is that the teacher in his arrangements takes account of the nature of the pupils. He knows that under given circumstances they must act thus and thus, because of their very nature. The child is allowed to follow the laws of his own development, because the teacher has studied those laws and has planned accordingly. It may be said that, after all, under these circumstances the children are deceived. They are not really free. They are dancing in chains. But they are as free as any other creatures that exist in a world of established laws. They are as free as the teacher, for example, who has to submit himself to the laws of their nature, in order that he may accomplish his ends. Fortunately we are not here called upon to go any further in the direction of metaphysics.

Competing Interests.

It is too often forgotten that interest in any one thing can be aroused only at the expense of withdrawing it from some other thing. Any given interest is the result of a struggle among various claimants for that interest. In educational work we are so busy with the positive side that we are apt to neglect the negative. We often fail to rouse interest in one thing because we neglect the fact that interest is already engaged with something else. We ought to pay more attention than we usually do to the external claims on the interest of our pupils. Most teachers are now keenly alive to the need for a good system of ventilation; but they seldom correlate this need with the question of retaining the interest of the pupils. Yet there is no more formidable competitor for the interest of the children than the headache that results from breathing foul air. A headache has an absorbing interest for most people. Again anything striking and new in the room, whether in the way of apparatus or adornment, is an element to be reckoned with in the struggle for interest. Even personal peculiarities on the part of the teacher may have an adverse influence. The pupil who is anxious to keep an exact record of the number of times the master uses the phrase "as it were" during the course of the lesson, is not in a suitable frame of mind to give his whole-hearted interest to anything else.

In the actual process of teaching the same competition for interest is going on, and there is danger that the teacher will fail from the very importance he attaches to *rousing* interest. He is so occupied with winding up the clock of interest that he forgets that it is necessary to let it run down. Any interest roused during a lesson must either be of fundamental importance to that lesson, and so to be retained throughout, or it should be allowed to exhaust itself before a new interest is introduced. There are certain interests so strong in themselves that they should never be introduced at all in the course of a lesson. It is folly during the match season, for example, to introduce the subject of cricket. In spite of the teacher's best endeavours, aided by the good will of the boys, the paramount external interest will refuse to be banished. But even with matters that legitimately belong to the lesson there may be minor interests aroused that do serious damage unless they are allayed. The best way to kill an interest is to satisfy it. Accordingly, all subordinate points of interest should be ruthlessly explained away, though the main interests of the lesson are carefully conserved. If a story is told to illustrate a particular point, that story should be complete in itself and should have a definite end—even though the end is not in itself essential to the point to be illustrated. A clergyman, for example, wished to illustrate the "love that is shed abroad in our hearts" by a reference to what had happened to a couple of children in the bush in Australia. He gave a vivid description of the adventures of the little ones, till at last the fatal words "lost in the bush" began to have a personal application. The horrors of the night among the trees were emphasized in order to bring into greater relief the glory of the sunshine in the morning. As soon as the clergyman had got the sun up, he fell at once into a glowing comparison of this flood of light with the flood of love that is shed abroad in our hearts. This was bad teaching: for while the interest of the teacher wandered into the realms of metaphor the interest of the children remained with these babes in the wood. How did they get out? Were they very hungry? What did their mother say?—these were the questions to which the pupils were giving more or less satisfactory answers while the preacher was dealing with his spiritual application. It may be admitted that the ending is artistic, inasmuch as it left something for the imagination of the hearer. But this is precisely what it ought not to have done as a part of a lesson. An ending should have been supplied—the more commonplace the better, so long as it set free the pupils' interest and allowed it to flow into the channel the teacher wanted.

All side references should be so plain as to lead to no spirit of inquiry being aroused with regard to them. Preachers frequently err in this respect. It is always a mistake to make such a reference as: "In the words of one of our most distinguished novelists ——." It is a challenge to the congregation to place the quotation. "As George Meredith remarks in 'The Egoist'" leaves no room for inquiry. Those who know Meredith have a slightly increased interest in wondering which words are to be quoted; but their interest is exactly what the speaker wants. Those who do not know Meredith are left, at least, calm; they are freed from the responsibility of trying to place the words elsewhere—for example, in Hall Caine.

Teacher's Interest and Pupil's Interest.

It is sometimes argued that in order to be interesting the teacher must be himself interested; but there is clearly a distinction between the teacher's interest and the pupil's. The pupil ought to be interested in the subject taught, while the teacher cannot be expected to have anything like the same keenness, since it is all familiar ground to him. Yet it cannot for a moment be expected that an uninterested teacher will rouse the interest of his class. The fact is that teacher and pupil, during a well taught lesson, are both interested—but in different things. The teacher's interest centres in the interaction of minds: he is less interested in the facts he is presenting than in the effects these facts are producing on the minds of his pupils. All the same, interest is infectious; the intellectual glow that accompanies the action and reaction of active minds on each other ought to accompany every lesson. The interest of the master cannot fail to inspire the pupil, even though the incidence of interest be different in the two cases. The form in which the teacher may show his interest depends to some extent on his temperament. If there is any choice between the two extremes, it is better to show too much interest than too little. It is, in particular, a great pity when a teacher—through fear of talking too much, or giving his pupils more help than he ought—withdraws within himself and deals with the class in a coldly intellectual way. Speaking generally, however, a well taught class acts like a grateful blaze on a cold day, and interest begets interest.

The CHAIRMAN said that the main difficulty with which the teacher had to contend was that of making his subject interesting to his pupils, and the lecturer had not only shown them how to overcome this difficulty, but had done so in a manner which was extremely interesting in itself. He had dealt with the subject from the point of view of the working of the human mind, and so made it more interesting than it would otherwise have been.

Mr. ORCHARD observed that in order to be interesting in teaching it was important to teach from the pupil's point of view. Clearness and simplicity were of the greatest importance, and the teacher must see that the matter presented bore proper relation to the knowledge acquired by the pupil. Care should also be taken not to weary the class by making the lesson too long. Considerable use might be made of the interrogatory method in arousing the interest of the pupils.

A vote of thanks to the lecturer concluded the proceedings.

THE MODERN LANGUAGE ASSOCIATION.

THE PARIS MEETING.

[*From our Special Correspondent.*]

THE meeting of the Modern Language Association in Paris began on Thursday, April 14. A more auspicious time could hardly have been chosen, though it is only right to say that the date was fixed long before the conclusion of the Anglo-French agreement. It was with Miss Williams, the energetic President of the International Guild, that the idea originated, and to her enthusiasm was the success of the meeting largely due. More than a hundred members of the Association, at least half of them ladies, availed themselves of the invitation, and received a hearty welcome in one of the amphitheatres of the Sorbonne. Prof. Beljame, whose name is so well known in connexion with English studies in France, introduced the visitors to the Minister of Public Instruction, M. Chaumié, who had kindly come up from the country for the purpose. Nothing could be more cordial than his Excellency's speech. It was acknowledged in graceful terms by Sir Hubert Jerningham on behalf of the Association. Naturally all three speakers dwelt on the recent agreement, and their reference to it gave additional warmth to the courteous hospitality characteristic of Frenchmen under all circumstances. The business of the meeting was opened by M. Hovelacque, who has recently passed from a professorship at the Lycée Carnot to the chief inspectorship of English studies. His discourse was a lucid exposition of the principles of the direct method of teaching modern languages, which has recently been made obligatory in France. These principles are now pretty well known, but a few lines may be given to M. Hovelacque's statement of them. The object, as laid down by authority, is the "effective possession of the foreign language." A child of three has, in a very real sense, an "effective possession" of his mother tongue. The teacher's aim, then, is to give to the lowest classes a small vocabulary, correctly enunciated, absolutely at the speaker's command without conscious effort of memory, and always embodied in sentences. The words and phrases used must be associated with real objects or feelings, not with corresponding words in the mother tongue. This oral instruction should cover two years, not necessarily to the exclusion of some written work; but throughout the cultivation of the ear and the vocal organs is to take precedence of the education of the eye. For the next two years reading the foreign language is the main object, the material to be chosen so as to follow naturally on the oral lessons of the previous years, and to extend very gradually the vocabulary acquired in them. Translation is avoided; the interpretation of unknown words and phrases in the foreign language is, as much as possible, secured by what is already known in that language. Thus these four years are distinctly preparatory to the literary studies of the following period. How effective these literary studies can be made was exemplified by a visit to the higher classes of the Lycée Molière, one of the best girls' schools in Paris. A lesson on Shakespeare's "Richard III.," given entirely in English, would have done credit, whether regard be had to the teaching or to the performance of the pupils, to any English school. M. Hovelacque was followed by Dr. Heath, of the Board of Education Library, who read an interesting paper on "The Place and Treatment of Modern Languages in the English School Curriculum." To our great regret, a paper by Prof. Sadler, President of the Association, was not forthcoming, owing to the indisposition of the Professor. He had intended to treat the very interesting subject of "Some French Influences in English Education."

The sitting of Friday was opened by M. Baret, Maître de Conférences à la Sorbonne, on "The Organization of Secondary Education in France." He pointed out that almost from the beginning of the last century subjects other than classics and mathematics had found a place in the curriculum, but that it had gradually become overcrowded. To remedy this evil, and to meet the wants of pupils intended for different careers, modifications had been introduced. At present there were running side by side four different curricula, of which the leading subjects were respectively (1) Latin and Greek, (2) Latin and modern languages, (3) Latin and science, (4) science and modern languages. Each of these was so arranged as to have a convenient break at the end of four years; so that a boy leaving school at fifteen or sixteen would have received an education complete as far as it went. M. Baret further expressed his agreement with M. Hovelacque as to the direct method, putting the training of the ear and the vocal organs in the first place, but pointing out that neither written exercises nor the judicious study of grammar by means of examples was excluded.

M. Baret was followed by Mr. Storr, who read an amusing paper on the changes that had come over modern language teaching in England. He introduced some capital stories, including an experience of his own school-days some fifty years ago, when he had seen a French class melting away, little by little, till the master was roused from a brown study by some accidental (or intentional) noise. He pointed out how for many years the comparative indifference both of masters and of boys to the study had interfered with its progress, and augured a far better future both for the subject and for its teachers. The direct method, he said, was making rapid strides in Great Britain. Throughout the paper the audience were kept in the best of spirits by a series of anecdotes and epigrams with a serious thread running through them, and it concluded with an earnest protest against the common fault of setting trivial books for study. It was absurd that there should be quite a number of school editions of such uninstructive stories as "Le Roi des Montagnes" and "Colomba." With most of the principles of the direct method the lecturer expressed his agreement, but he was distinctly opposed to the exclusion of translation into the mother tongue.

The afternoon was devoted to papers of a more distinctly literary character. M. Georges Pellissier, the well known author of "Le Mouvement Littéraire du XIXme Siècle" and other works on contemporary literature, discoursed on French contemporary prose, or, more strictly, on French novels. He classified recent works on imagination under three heads—Naturalist or Realist, Impressionist, and Symbolist. At the head of the realists stood Flaubert, whose "Madame Bovary" aimed simply at reproducing things as they are, without introducing the feelings or judgments they called up in the mind of the writer. Such writing was distinctly objective, excluding the subjective or personal element, "tout ce qui trahit le moi." In "Madame Bovary" the emotions described were of universal application, not far-fetched or accidental—a characteristic not always to be found in his followers, among whom Zola, Guy de Maupassant, and Ohnet are to be reckoned. Necessary results of this point of view were the absence of invention and imagination, and a readiness to take words from any source, technical or otherwise, provided they expressed the exact idea—an extension, in fact, of Victor Hugo's

Plus de mots sénateurs, plus de mots roturiers.

Flaubert was especially distinguished by his very careful choice of words; in some of his followers the hospitality accorded to technical words was apt to degenerate into coarseness. Opposed to the realists were the impressionists, who, so far from suppressing the subjective element, sought above all to render the impression produced on their own minds. In a sense the historian Michelet may be looked upon as the founder of this school, but its chief representatives were the brothers de Goncourt. Among the peculiarities of their style may be mentioned the invention of new words such as *mélancolieux*, *brouillardeux*, to express more subtle shades of meaning than *mélancolique* or *brumeux*, the use of adjectives as nouns, the preference of the imperfect to the past definite as more vivid, and the frequent employment of ellipses. There is, in fact, in their style a sort of unstable equilibrium. Daudet, to a certain extent, belongs to this school, but he is more moderate and restrained, and avoids their tendency to be morbid and neurotic. Lastly, the symbolists, who are more conspicuous in poetry than in prose, are characterized by vagueness and at times by a tendency to play fast and loose with grammar.

M. Pellissier was worthily followed by Prof. Hudson, of the University of London, who took for his subject contemporary poetry as exemplified by Rudyard Kipling and William Watson. The age of the great Victorian poets, of whom Swinburne was the sole

Digitized by Google

survivor, had come to an end, and no poet had yet risen to take their place. But the two poets named, while not rising to greatness, exemplified distinct literary tendencies. Kipling had at once made his mark by his virility, his imperialism, and his discovery of a new and interesting field; Watson's fame had grown but slowly, but his success was well deserved by his scrupulous adherence to the great principles of all noble art. He excelled especially in terse poetic criticism, of which the lecturer quoted some brilliant examples. Without venturing to prophesy, the lecturer expressed his belief that the great poet to come must combine Kipling's strength with Watson's striving after artistic perfection.

The next day was devoted to visits to various *lycées*, the ladies starting as early as half-past seven, to be in time for the first lesson at 8.30. All of us were struck with the successful way in which English and German lessons were conducted on the direct method, with the pleasant relations between teachers and taught, and with the evident interest of the pupils in their work. The class-rooms are spacious and well lighted, and the appliances excellent. One thing seemed wanting—a supply of pictures on the walls, which, with us, is commoner in girls' schools than in boys' schools. The afternoon was spent in a very pleasant visit to the Lycée Lakanal, situated a few miles out of Paris in what was formerly the Royal Park of Sceaux. It is partly a boarding school, partly a day school. We were received at the gate of the park by the teaching staff, and walked up to the school along the avenue, where the boys were ranged on each side. In the great hall we were received by the *proviseur*, M. Bazin, who welcomed us in a cordial and humorous speech, and passed us on to an adjoining room adorned with a fresco of a football scrimmage, where we drank champagne, which, as he told us, "donne de l'esprit même à ceux qui n'en ont pas," and listened to an English address. We replied with a hearty cheer and a few words recognizing how much we had to learn from France, and expressing the hearty wish "Floreat domus Lakanalis." The buildings are on a magnificent scale; the dormitories extremely airy, each with a curtained cubicle for a master on a sort of estrade; the bath-rooms, furnished with tepid douches, were extremely well arranged; a swimming bath is shortly to be constructed. The dining-rooms, the gymnasium, and the large hall for entertainments and indoor games are spacious and exquisitely kept. It was characteristic that the only occupant of the infirmary was a small boy who had broken his leg at football. The park is arranged for various games; a set of hurdles for *la course aux haies* looked formidable to those of us who are no longer young. Nothing could be pleasanter or more courteous than our reception and the way in which we were shown about by the professors and some of the elder boys.

On a subsequent day M. Dispan de Floran gave us an enthusiastic account of the Lycée and its methods. As is known, the traditional *lycée* has the characteristics both of a seminary and a barrack—characteristics which are gradually being modified. In recent years many ideas have been borrowed from the English public schools, especially in the direction of physical exercises. Steps, too, are being taken to modify the strict uniformity of organization which has hitherto prevailed. With this view, four schools, of which Lakanal is one, have been constituted *lycées autonomes*, in which considerable freedom is given to the governing body and the *proviseur* in respect both of finance and of general management. Such innovations as the provision of private rooms for some of the elder boys and the introduction of manual work and of commercial instruction are examples. On one point there seems likely to be no imitation of English ways: the boarding house kept by a master is quite out of harmony with French ideas from the point of view both of masters and of the public. Very interesting is the annual publication of the Lakanal, entitled *Acta et Gesta*, containing a record of the school year and articles by professors and old and present boys. The experiences of a young English student are particularly noticeable. The list of distinctions gained by "Old Boys" includes, among many of a higher type, the appointment of one of them to the editorship of *Le Monde Sportif*. On our return to Paris we wound up the day with a *soirée* given by the *Guilde Internationale*, where a recitation of the Trial Scene in "The Merchant of Venice" by French young ladies, and of a scene from Molière by English young ladies, went off with great spirit.

On Sunday the Association was hospitably entertained at afternoon tea at the British Embassy. On Monday the morning, sitting was devoted to phonetics. Prof. Passy gave a very interesting *causerie* on some remarkable applications of that science. The first was to a problem in comparative philology—why do we find side by side Græco-Latin *pater*, Germanic *fadar*, Celtic *athir*? The transition from *p* to *f* is comparatively simple and is illustrated by modern dialectical phenomena. But why has the labial altogether disappeared in Celtic? Some North American tribes—for example, the Iroquois—have no labials in their language, and are quite contemptuous of Europeans who "talk with their mouths shut." In South America a tribe called the Botocudos wear pieces of wood, but only small pieces, as ornaments on their lower lips—a practice not conducive to the pronunciation of labials. However, they do succeed in pronouncing them. In South Africa a tribe is found who both wear wooden ornaments on their lips and have no labials in their language. Putting these and other facts together, there is strong reason for connecting lip ornaments and the absence of labials. Another interesting application is the contrivance of Dr. Forchhammer for representing visually the difference between *p*, *b*, and *m* to deaf-mutes. The lip-movement is the same for all three; it is supplemented by signs with the hand, each corresponding to a movement of the other organs concerned.

Prof. Passy was followed by Dr. Edwards, who illustrated from the Japanese pronunciation of certain English words some of the principles of phonetics. The Japanese language has five defined vowel-sounds, which may be either long or short. Our own has more, though of course not all possible ones. Thus a Japanese attempting to pronounce English words avails himself of the nearest sound in his own tongue. Dr. Edwards added some interesting details as to the chief difficulties of English children in pronouncing French and German, the result of the examination of a great many secondary schools.

The final meeting was opened with a lecture by Prof. Seignobos, of the Sorbonne, author of an excellent history of the nineteenth century, on the best way for a foreigner to study contemporary France. One of the commonest mistakes is to look upon the French as inconstant; the fact is that among the various peoples making up the French nation two political conceptions of opposite tendency and nearly equally balanced are always in existence; so that the country has long been in unstable equilibrium. Even in the Austro-Hungarian Empire there are not so many different nationalities as in France—nationalities differing in physical characteristics, in habits, and in language—French being really, so to speak, only the official language. Thus the North includes the Frankish Flemings, the people of Lorraine, the Germanic population of Burgundy and Franche Comté, the Scandinavian Normans, and the Bretons akin to the people of Devon and Cornwall. Similar divisions exist in the centre and in the South. It is not correct to say that Paris governs France: it is rather the meeting place of conflicting parties. Least of all is the Paris *boulevardier* the representative Frenchman: types of various parts of France may be found in Paris, but they must be carefully sought out. Nor is the Paris press the best medium for studying French politics. On the whole, the North-East is the most energetic and influential part of the country. Among the peasantry many different types exist: the coarse Picard boor of Molière and Balzac is quite different from the more refined type correctly described by Georges Sand. M. Seignobos added many useful suggestions as to the classes of persons most capable of giving information about their respective districts, and exhibited a political map of France, pointing out the constancy of the several districts to their principles and party. At the conclusion of his lecture M. Morel, delegate of the French *Société de Professeurs de Langues Vivantes* expressed his pleasure at the visit of the Association, and held out hopes of a return visit on the part of the young Society he represents. Mr. Eve then briefly thanked the authorities for the cordial welcome given to the Association, and for all the kindness its members had received. The Vice-Rector of the University, M. Liard, responded, and in the course of a pleasant and humorous speech announced his intention of recommending the establishlishment of ten *bourses* or exhibitions to enable medical and legal students to continue their studies in England.

THE BOARD OF EDUCATION have issued a circular to Local Education Authorities informing them that collective examination held by the Board of Education for enabling candidates to qualify for engagement as pupil-teachers will take place on Saturday, May 14, 1904, with supplementary examination for those candidates who, owing to some sufficient reason, are not able to attend on the earlier date, on Friday, May 20.

OPEN COURT.

Thay say . . .
Quhat say thay?—Lat thame say!

SCIENCE IN SECONDARY SCHOOLS.

By the Rev. William Burnet, M.A.

The Education Act of 1902 will, I feel sure, do good service to the country by co-ordinating the several branches of education—primary, secondary, technical—under the one Central Authority, and so preventing the overlapping and collision in administration which have proved so mischievous. Such a change has long been wanting, and the absence of it has caused very serious inconvenience to all concerned, as well as much waste of public money. There is, however, one feature of the new regulations for secondary schools which seems to be open to grave objection: that is, the prominence given in them to science and mathematics. Until within the last few years these subjects had not received that degree of recognition which their importance demands, and which is assigned to them in most civilized countries, even in Japan. Inattention to this matter, as well as to technical training, was greatly retarding our commercial and industrial progress and placing our merchants and manufacturers at a considerable disadvantage in their competition with foreign nations. These causes have led to some radical changes in our system of secondary education.

Now the Board of Education has made two divisions of secondary day schools. Those of Class A were formerly known as "the schools of science," and were administered by the County Councils. They must provide a "thorough and progressive course of science, together with the subjects of a general education." Not less than thirteen hours per week must be allotted to the obligatory subjects, viz., Mathematics, Physics, Chemistry, Drawing, and Practical Geometry, and not less than ten hours to other approved subjects, including English and at least one foreign language; but two of these ten hours may be devoted to some form of manual instruction, and two others of them to mathematics or art. In other words, of the twenty-three hours seventeen may be applied to science and mathematics and manual occupations, and only six to English and a foreign language. Is this, it may be asked, a reasonable proportion of time for these and other equally important subjects? It should, indeed, be understood that none are to be admitted into these science schools under twelve years of age, and unless the Inspector considers them fitted to benefit by the course. Moreover, in the case of girls, instruction in one of the biological subjects, xiv., xv., or xvii. (*i.e.* Human Physiology, General Biology, or Botany), may, with the approval of the Board, be substituted for Physics, and either elementary science for Chemistry. Practical work will be required in each case. Still, even under these conditions, it may be asked—with no small astonishment—how, in the case of such young pupils, sufficient room can thus be left for their other lessons, such as grammar, history, geography, composition, &c., so indispensable to even an elementary education?

When we turn to the schools of the second division, B, we find the same conditions of age and fitness enjoined, and grants are to be dependent on compliance with the rule that not less than nine hours per week, including not more than five hours for Mathematics, be devoted to Science, both theoretical and practical, the latter being taught in approved laboratories. Here, again, we meet with a similar disproportion, though in a less degree. If the hours should be, as in many such schools, six per day or thirty per week (including intervals of recreation), we should have almost three-tenths of the school time limited to this one branch of instruction.

Under these circumstances is there not much reason to fear that the general training of these young people may prove superficial and unsatisfactory? Aiming too high it may hit nothing. Moreover, these arrangements are surely far too uniform and inelastic. There is no allowance made for the very various capacities and tastes of children of even the same age and the same social status. All alike are to be stretched on the same hard Procrustean bed of scientific teaching, and for the same length of time in every week throughout their course. Whatever may be the abilities with which Nature has endowed them, and whatever may be their mental defects, they must pass through the same ordeal. Nor is any consideration paid to the requirements of their future callings. Some with decidedly scientific tastes may take to such instruction with as much avidity as does a duck to water; while others, probably a large majority, regard it as simply drudgery, and their parents complain that their school time is wasted on subjects which will in no way qualify them for their future callings.

Very different might be the result if the elements or simple notions of science were taught to all the scholars for, say, one or two hours weekly; and then any specially intelligent pupils who may wish to remain at school after the age of fifteen were admitted to the higher scientific training of which they may be found capable. The appalling ignorance of ordinary branches of knowledge to be seen in many who have passed through the elementary mill is sufficient proof of the unsuitableness of such higher training for all. I speak from information supplied by some who have made the attempt. In a higher elementary school where chemistry and botany and other physical sciences are taught by competent masters not a few girls have been met with who did not know that the Earth rotates round its axis, the causes of the seasons, or the simplest applications of the law of gravity. For such the most elementary notions are all that they can receive at first, as well as careful grounding in those general subjects that would prepare them for the duties of their after-lives. Manual occupations and technical training for boys, and domestic economy for girls, may, of course, with great advantage be combined with their mental culture. All that we venture to object to in the new system is that the proposed standard is often too high as regards the majority of scholars, and that the other branches of their education may be consequently more or less neglected.

It may serve to throw light on this perplexing problem if we now compare with our own new system the methods pursued in some other countries. In Germany, for instance, we understand that only the elements of science are taught in the elementary and lower secondary schools, and fuller, more advanced teaching is reserved for the *Gymnasien* and colleges. Some time ago, Mr. Hughes, writing in the *Contemporary*, stated that "German education has a philosophical basis, and no practical working in science is done in any primary or higher primary—and, indeed, in few secondary—schools. Even the girls are not taught cookery or laundry work, nor is manual instruction taken up in these German schools to anything like the extent that we might imagine." This statement has since been confirmed in the same periodical by Sir William Ramsay. It is certain that German educationists do not err in the direction we are now indicating of excessive attention to science; nor, if they are beginning to outstrip us in trades and manufactures, is their scientific or technical teaching in such schools the cause. These subjects are, for the most part, relegated to special institutions.

In the French *écoles primaires supérieures*, or higher elementary schools, which are, in some respects, superior to the secondary, the course includes arithmetic, the elements of algebra and geometry, and *notions* of physical and natural science in their application to agriculture, industries, and hygiene. The number of hours devoted to these and other subjects is increased according to the ages of the pupils, and as they reach the second or third year of their course.

In the Swedish *Gymnasier*, or secondary schools, four to five hours per week in all standards are given to mathematics; two to three to science in the first five classes; two to three to natural history, physics, and chemistry only in the highest classes; the total of school hours ranging from twenty-seven to thirty-two.

In Portugal the latest school reform dates from 1894, and in the *lycées*, or secondary schools, four hours per week are assigned in all sections to mathematics, two to five to natural and physical science, out of from twenty-four to twenty-eight per week. But there the number of hours devoted to these subjects is graduated according to the age and standing of the pupils during the seven years of instruction. In the higher primary schools of Lisbon of twenty-eight hours, two are given to arithmetic; two to geometry; five to natural science; but the pupils at the end of their primary course have passed an oral and written examination as well as have received a certificate of having completed their compulsory attendance. The conditions are therefore much more stringent than those proposed for our own schools. The sifting process no doubt eliminates most of those incapable of benefiting by more advanced instruction, and so the standard in every department can be maintained.

Hungary is not a land to which we should naturally turn for suggestions on this subject; still, we find from a very interesting report on the school system there lately issued by our own Board of Education that their secondary schools are divided into classical and modern. In the modern *Realschulen* from twenty-eight to thirty lessons are given weekly. Of these three to four are on

Digitized by Google

mathematics, two to three on natural history; whilst in the *higher* classes three to five are added on physics, two to three on chemistry. No physics are taught until the pupils reach the third class; chemistry is taught only in the fourth, and in the grades above it. In Hungary the pupils must either have passed an entrance examination or give evidence that they have passed through the four lower classes of an elementary school.

Our last appeal shall be to the United States. From the "Report on Secondary Schools' Studies," published in 1892, we learn that the course extends over four years, and the school day and week are measured by periods. In the first year, of twenty-five weekly periods four are assigned to algebra; in the second four to algebra and geometry; four to botany or zoology; in the third year, four are added for physics, and three for astronomy and meteorology; whereas in the fourth year ten of thirty-three weekly periods are assigned to science.

In all these countries it appears that the scientific teaching is given only to those fairly qualified to receive it, and that the time spent on it is proportioned to their age and progress, leaving ample time for the other branches of education. If the same provisions were made for our secondary schools, all objection would be removed.

REVIEWS.

THE LAST TWENTY YEARS OF VICTORIA'S REIGN.

A History of England. By the Rev. J. Franck Bright, D.D., Master of University College, Oxford. Period V.: *Imperial Reaction* (1880–1901). (4s. 6d. Longmans.)

The final volume of Dr. Bright's well known outline of English history covers but a little more than twenty years; and, as these are the years that close the reign of Victoria, the author has to run the gauntlet of conflicting contemporary opinion. Although we differ from him at points, and sometimes sharply, we recognize his difficulties, and we are too grateful for a book of really live history to press any particular objections—except one, which happily does not involve party controversy. If we are to "think Imperially," the first question of all is the position and condition of India. Now, while Dr. Bright chronicles the large public incidents of the time, and drops hints—if hints they be (for they are scarcely plain enough to be caught up by any one that has not studied Indian affairs)—he gives no real indication of the serious problems of government and administration that are naturally arising out of the rapid intellectual and social transition. His unfortunate comments on the "so-called" National Congress (as if that jibe were not antiquated) might have been avoided by a perusal of the annual proceedings of the body and by an elementary familiarity with its actual history. We must remind Dr. Bright of the reply made some ten years ago by Sir Richard Garth, ex-Chief Justice of Bengal, and a good Conservative, too, to Sir George Chesney, then member for Oxford, who had written of the Congress substantially in the strain of Dr. Bright, though more fully and bitterly. Sir Richard, after particular details, said:

> I will tell you what they have done. They have dared to think for themselves; and not only for themselves, but for the millions of poor ignorant people who compose our Indian Empire. They have been content to sacrifice their own interests and to brave the displeasure of Government, in order to lend a helping hand to those poor people. They have had the courage and the patriotism to denounce abuses which have disgraced our Indian rule for years past, which have been condemned by public opinion in India and in England, and to which the Indian Government appear to cling with a tenacity which is utterly inexplicable. They have dared to propose reforms which, despite the resistance of Government, have been approved by Parliament, and to endeavour to stay that fearful amount of extravagance which has been going on in India for years past, and has been the means, as some of our best and wisest counsellors consider, of bringing our Eastern Empire to the verge of bankruptcy. That is what these good men have done to deserve the taunts and insults of the member for Oxford City, and the relentless persecution of the Government of India.

To say that such an immense gathering, representative of all classes and creeds and the principal occupations, and meeting in all the great cities of India, one after another, year after year since 1885 (not 1887), is "little more than the mouthpiece of the class of educated Bengali Babus," is anything but "history." The importance of this matter lies in the fact that the Congress gives formal expression to the popular movement, and that this movement is too pressing to be passed off by formulas of careless contempt. The facts must be looked in the face, at least by an historian.

Dr. Bright indeed is doubtful whether his volume has any right to the title of "history": at any rate, it is a narrative and judgment of contemporary events and opinion, which is very welcome. Prominent, of course, are such central facts as "the Irish question, the reconstruction of parties, a conservative legislation infused with liberal ideas, a temperate Imperial foreign policy, and an unprecedented advance in the importance of the colonies." Dr. Bright has expended enormous labour in winnowing from the vast heap of materials the really essential elements, and in reducing them to an orderly and well sustained narrative. His general reflections on the tendencies of the time are well considered and well worth consideration. "The one thing which makes itself obvious in the closing years of the late reign is the setting in of a strong tide of reaction, visible in nearly every branch of life. . . . Ambition and the love of rule, belief in extended empire, in restricted and selfish commerce, in the superiority of a military life, in the value and importance of the privileged classes, and the substitution of symbolism for higher spiritual creeds, are marked characteristics of the time, and are exactly those things which the last century prided itself on having left behind." Hence the appropriate descriptive title of the present volume. There are three maps (at end) and four plans (in text), all helpful.

COMMERCIAL GEOGRAPHY.

Handbook of Commercial Geography. By G. C. Chisholm, M.A., B.Sc. Fourth Edition. (Longmans.)

It is eleven years since the last edition of this standard work appeared. In the present edition the author has not only availed himself of the fresh statistical and general information constantly accumulating, but profited by his experience as a lecturer to re-write a good many paragraphs. In particular, increased attention has been given to the connexion between commercial geography and commercial history. Fresh maps and diagrams have been introduced, and the statistical tables in the appendix have been brought up to date. Probably considerations of printing have made it necessary to employ supplementary tables instead of adding fresh columns to the tables of the third edition. The new introduction deals with a good many topics of immediate interest, but wisely abstains from pronouncing any opinion on the fiscal question. The author calls attention to a conclusion drawn in the first edition of the book. "It is the tendency," he said in 1889, "of commerce to bring about a more equal distribution of industry all the world over, and to give more and more importance to purely geographical conditions." His inference was that English trade, though still likely to expand, was bound to expand at a slower rate—an inference which the intermediate years have fully justified. He points out, for example, that, while in the second half of the nineteenth century the British consumption of raw cotton has steadily increased and more than doubled in amount, our percentage of the whole world's supply is only three-fifths of what it was in 1850. Again, in 1853, the consumption of coal in the United Kingdom was double what it was in the United States; at the present moment the United States are ahead of us. Moreover, while our consumption of that mineral per head of population has remained practically stationary, that of the United States has increased by fully one-half. In the price of coal, too, the results are startling. In 1850 it was slightly dearer than with us; in 1901, thanks to the accessibility of the United States deposits and the facilities for the use of mining machinery, their average price is about three-fifths of ours. Among other points discussed are the causes making for the centralization and for the decentralization of industries, the possibilities of inland motor-carriage, and the results to be expected from the completion of the Panama Canal. The introduction concludes with a list of unsolved problems, among which is one now much to the fore—the significance of changes in the value of imports and exports per head of population.

With regard to the work itself, it may be sufficient to indicate the general lines on which it is constructed. Some sixty pages are devoted to the general facts relating to the production, distribution, and exchange of commodities. The discussion is necessarily far from exhaustive, but it is very suggestive to the teacher as to the points to be dealt with in the detailed treatment of different countries. The next hundred and fifty pages deal with the commodities themselves. The section devoted to wheat brings out many interesting facts. There is no month in the year in which there is not a wheat harvest in some part of the

Digitized by Google

world. In productiveness per acre England, Holland, and Belgium stand highest, though exceeded by some parts of the Red River district in the United States and Canada. Italy, Russia, India, Argentina, and Victoria stand lowest. Wheaten bread is still a rarity for the poorer classes in a large part of the mainland of Europe, and was so in some parts of England less than a century ago. The relative advantages of beet and the sugar-cane are discussed at some length, and on all the more important articles of commerce, and, indeed, on the minor ones, interesting information is given. The imports of rubber into the United Kingdom have been multiplied by more than fifty since 1850. The range of the vine, at least as a wine plant, has been modified by commerce. Cotton is almost an example of perpetual motion: the best manure for it is cotton-cake. One of the causes of Germany's pre-eminence as an exporter of paper is its accessibility to populations that must dispose of their rags and do not want them back in the form of literature.

The remainder of the book is occupied with the commercial geography of the various countries of the world, and their advantages and disadvantages for particular industries. It is worth noting that among the disadvantages of our own country the author places the want of a decimal system of coinage, weights, and measures, and our irrational spelling. It need hardly be said that he does not attempt to reform the latter.

Science for All.

Cassell's Popular Science. Edited by Alexander S. Galt. Illustrated. Two volumes. (12s. each.)

These two volumes—we recently noticed the first—offer a wide variety of extremely interesting articles upon common things regarded from the point of view of science, and they are profusely illustrated and handsomely furnished forth. It is not only such immediately insistent things as the applications of electricity or the mechanism of a motor car that are expounded: the ordinary man is stimulated to think and to inquire by discourses on a piece of coal or limestone, a feather, a pond and its inhabitants, the vagaries of British weather, the anatomy of a London fog, the evolution of the rifle, the lifetime of a seed, the colours of animals, and so forth. The treatment is thoroughly popular, instructive, and at the same time suggestive. The volumes should be especially prominent in libraries frequented by "the general reader."

The Doctrine of Interest.

Interest and Education. By Charles DeGarmo, Professor of the Science and Art of Education, Cornell University. (4s. 6d. net. Macmillan.)

The President of Cornell has said that "Interest is the greatest word in education," and Prof. DeGarmo essays in this volume "to make a concrete application of the doctrine of interest to the matter and methods of education." The author looks to the training of the feelings as well as to the training of the intelligence: "interest, enthusiasm, mental attitude, and volitional habits are not the creation of a day"; and, "for this reason, methods of teaching have a powerful influence in generating and developing them." In a preliminary psychological analysis, simply conducted and expressed, Prof. DeGarmo practically restates the theory of interest set forth in Prof. Dewey's monograph "Interest as related to Will." Interest is to be a form of "self-expression." Distinguishing between "clear" ideas and "vivid" ideas, he finds that in the attempt to supply an education that should prepare for everything in general and nothing in particular, "vivid" ideas have got displaced and postponed "to the concluding stages of education, where they are least needed"; whereas they are most needed in the earliest stages. This leads him to a proposal for a normal boy's course of study, which he summarizes thus (pages 6, 7):

> Departments of work are prescribed in so far as they embody knowledge necessary either for earning a livelihood or for making life worth living; but the studies within departments, so far as they represent anything like equality of value, are to be made elective. In other words, students elect, not departments, but more or less equivalent studies within departments. The result is that all leading types both of knowledge and of training will be represented in each student's education, while the elasticity allowed gives each the best possible chance of discovering his greatest powers, and of finding those bodies of ideas which to him are most clear and vivid.

Another aspect of the same distinction is that "between sensory ideas and their motor reactions"; and "it is an almost irresistible tendency of the school to lay the chief stress of its efforts upon the sensory intellectual side of the mind, using outgoing expression only so far as the acquisition of knowledge or the drilling of the mind necessitates, so that the greatest sources of interest in the young remain almost untouched by the school" (pages 87–88). This introduces an interesting inquiry into the relation of school to country life and city life, the conclusion being that "education as now conducted does not restore what urban life has lost in educational influence." An English comparison evokes the opinion that, while "nothing is more antique than the instruction of English boys in the so-called public schools," yet "their play makes men of them, Mr. Kipling to the contrary notwithstanding." After a long quotation from "Tom Brown's Schooldays" (game of football), Prof. DeGarmo says: "This is the training that makes Englishmen. They might study Choctaw or Chinese and the mathematics of Ahmes; yet with such play they would grow up men." So the urban school of the future must have "extended exercises in all aspects of manual training, cooking, sewing, textile industry, drawing, music, and, later, laboratory practice in the sciences," furnishing "a complete co-ordination of motor and sensory powers." "Then the whole boy will be educated, and not, as now, but half of him" (page 115).

In the early stages, when the business of adult life is too remote to furnish motives for action and direct stimuli to interest, we must look elsewhere for the means of securing clearness and vividness of ideas in the minds of children. Prof. DeGarmo enumerates and illustrates a number of these, all grouping under manner and skill of presentation (concreteness, art of exposition, art of questioning, &c.). The treatment is simple, lucid, and concise; and the work is practical and suggestive. Though written in view of American conditions, it carries lessons for teachers everywhere.

GENERAL NOTICES.

CLASSICS.

A School Grammar of Attic Greek. By Thomas Dwight Goodell, Professor of Greek in Yale University. (5s. net. Appletons. Twentieth Century Text-Books.)

Like the other members of the series, this volume has the prime quality of attractiveness—large clear type well spaced, good paper, and flexible binding. Prof. Goodell has saved space by simplification of grammatical statements and by omission of non-Attic and rarer Attic forms and constructions. He might have gone further, we think, in a "school" grammar; at any rate, there is much that he might well have relegated to smaller type for later reading. The distinctive point in the Syntax is that the author has "sought to carry through consistently the principle of classifying by form," thus completely recasting the syntax of subordinate clauses. We certainly think that the current classification by function is the proper method, but Prof. Goodell's plan at any rate co-ordinates the grammar with the lexicon, and some learners may find it easier to study the matter in groups beginning with μή, ὅστις, ὅτι, ἵνα, &c. Simple subjunctive and optative sentences, and οὐ μή sentences, handled before subordinate sentences, lack for the moment—the psychological moment—the necessary means of adequate explanation. The numerous examples are specially instructive. Under a teacher the volume may be worked to great advantage, although we have grammars of home make that still hold the field in simplicity and accuracy of exposition and in clearness of arrangement.

Allen and Greenough's New Latin Grammar for Schools and Colleges, founded on Comparative Grammar. Edited by J. B. Greenough, A. A. Howard, G. L. Kittredge, and Benj. L. D'Ooge. (5s. Ginn.)

The volume exhibits a most careful revision of the edition of 1888. It embodies the well established results of the study of historical and comparative grammar during the past fifteen years, and the editors have frankly modified doctrines or forms of statement so as to bring the work up to the best modern knowledge. The arrangement, too, has been improved in not a few points. Altogether, the book stands in the front rank of scholarship and of educational efficiency. It is clearly printed on good paper, and strongly bound for much use.

Stories of the Ancient Greeks. By Charles D. Shaw. (2s. 6d. Ginn.)

A handy and pretty little volume of mythological and historical stories—thirty-two of each—with twenty-five pertinent illustrations. The author hopes "to brighten, if possible, other young lives by repeating for them the immortal fictions and the deathless histories which have been delivered to new audiences for thousands of years." He tells the stories very simply and very effectively. The volume ought to be in the hands of all children, for their own private reading.

A Latin Grammar. By William Gardner Hale, Professor of Latin, and Carl Darling Buck, Professor of Comparative Philology, in the University of Chicago. (4s. 6d. Ginn.)

"A working text-book, primarily adapted to the needs of high-school students," very clearly arranged and excellently printed and got up.

Digitized by Google

The treatment is fresh, distinctive, and interesting. In the Phonology, Inflexion, and Word-formation the historical explanations are strictly to the point, and do not expand into comparative grammar; even justification of "departures from the usual practice" is reserved. The selection and the disposition of materials are alike excellent. In the Syntax much care has been taken to cover all the constructions that occur at the stage in view and to exclude such as do not; and the arrangement is suited as far as possible to indicate the probable relationships of the constructions treated. The growth of Latin usage is also steadily kept in view. Some unusual terms may at first sight wear a repulsive look—such as "volitive subjunctive," "anticipatory subjunctive," "determinative clause," and half-a-dozen more, already introduced in earlier publications of the senior author; but the meaning of them is quite obvious, and they may get naturalized here as they have been widely accepted elsewhere. The whole work is very independent, and it is executed with scholarly ability and care. It is a most vigorous and suggestive treatise, and well worth attention in our secondary schools.

MATHEMATICS.

Arithmetic for Schools and Colleges, Part I. By John Alison, M.A., F.R.S.E., and John B. Clark, M.A., F.R.S.E. (2s. 6d. Oliver & Boyd; Simpkin, Marshall.)

The text in general meets the requirements of a numerous class of students and their teachers, and makes the principles and practice of the subject clear to the reader. It discusses with sufficient fullness the usual course of arithmetic as far as simple interest, and the nature of the instruction given is determined by the growing recognition of the fact that practical skill must be accompanied by an appreciation of the *why* and the *wherefore*. The laws of operations are considered, and the pupil learns the value of literal symbols for securing general proofs. The treatment of approximate methods of calculation is essentially good; yet the section of the work devoted to these methods creates the usual impression of not being entirely satisfactory—an impression that must exist so long as there is no clear agreement between authorities as to the best rules to be observed. The question of operations with recurring decimals is rather summarily dismissed by the writers, and they omit to give the few definite and very valuable laws which obtain for determining in the cases of addition and subtraction the necessary and sufficient number of decimal places to which the calculations must be carried in order that the complete *period* may become evident.

Graphical Algebra. By the Rev. E. A. Phillips, B.A. (2s. net. Normal Correspondence College Press.)

One of the "Normal Tutorial Series," and intended to be a text-book serviceable to candidates reading for University Matriculation or preparing to compete for King's Scholarships and Certificates. The book contains a great deal of very useful information. Numerous errors have unfortunately crept in: many, but not all, are misprints. Some of the diagrams also are rather rough in general appearance—a disadvantage always, but especially in connexion with a subject in which neatness tells. Facilities for practice in graphical work are provided by means of a large collection of exercises.

A First Book of Geometry. By W. Ahrens, M.A. (Lond.), and J. David Paul, B.A. (Cantab.). (9d. Meiklejohn & Holden.)

A good little book, which deserves to be warmly welcomed. It is not proposed that its pages should do the work of a teacher, but that its well expressed and informal introduction to the simple facts of geometry should for the most part be committed to memory by pupils who have previously been convinced of the truth of the text by means of verbal explanations and practical experiment.

Practical Plane and Solid Geometry. By I. H. Morris and Joseph Husband, A.M.I.C.E., A.R.C.Sc. (2s. 6d. Longmans.)

The revision of the syllabus of the Board of Education has created a demand for text-books of a modified character. The present volume will practically take the place of the former work on practical plane and solid geometry written by Mr. Morris, and very well known to many teachers and students. The new treatise will, it is hoped, have a sphere of general usefulness in addition to a position amongst the class-books specially adapted to the requirements of Elementary Stage students working under the new regulations of the Board.

Vectors and Rotors. By O. Henrici, Ph.D., LL.D., F.R.S., and G. C. Turner, B.Sc. (4s. 6d. Edward Arnold.)

Teachers and students alike will find the work a very valuable one, dealing as it does both skilfully and in sufficient detail with the elementary theory of vectors and rotors. Moreover, it is able at once to take its place among standard text-books; for the substance of it is an amplification of Prof. Henrici's course to first-year students at the City and Guilds Central Technical College. The work of arranging the materials in a form suitable for publication has been most ably carried out by Mr. Turner. The essential properties of scalars, vectors, and rotors are first presented as viewed from the standpoint of pure geometry. Each type of quantity is then considered fully, and the student learns how to define his quantity accurately and how to represent it completely in graphical form. He is taught also its algebra, which is carefully compared with ordinary algebra, and, finally, his attention is drawn to its applications in physical science. It may be mentioned, for example, that an outline of the elements of the important science of graphical statics is included in the volume, so as to serve as an illustration of the practical application of the theory of rotors.

ENGLISH LITERATURE.

William Makepeace Thackeray. By Charles Whibley. (2s. 6d. Blackwood. "Modern English Writers" Series.)

Mr. Whibley sprinkles a fluent narrative with an extensive variety of critical observations that will be found suggestive, even though they may not always command assent. Thackeray, indeed, is peculiarly open to criticism, both in matter and in manner; and his own free practice of the art discourages any attempt to shield him from a practitioner on himself. It requires considerable elasticity of nature and breadth of experience to enter into full sympathy with Thackeray. Mr. Whibley seems to stand apart at a theoretical point of view of his own, and so to miss the mark now and then; only it is well to have the independent outlook. We cannot think that he understands Barry Lyndon as well as Thackeray did; nor should we always agree with him when he takes up Thackeray's standpoint: it may be that, as in "Vanity Fair," "Thackeray had a perfect right to choose such puppets for his shows as aroused his keenest interest," but a diagnosis of the author's cynicism from his cynical selection and treatment (without relief) of a whole bookful of characters is not only natural, but fairly justifiable. We are thankful for one critic at least that has the courage to admit that the "Adsum" scene in "The Newcomes" "does not move" him, though it seems less than just to call the Colonel "the travesty of a man." Mr. Whibley is strongest, we think, on the "English Humourists," "the worst blot on Thackeray's reputation." Pity that he could not let supposed characteristics of modern authors severely alone (pages 158, 181), and take the trouble to avoid obvious and ugly lapses in the use of the King's English.

"The Arden Shakespeare."—*King Henry the Fifth.* Edited by Herbert Arthur Evans. (3s. 6d. Methuen.)

The introduction handles with directness and vigour the connexion of the play with the preceding historical plays, the date, and the history of the text; and discusses very effectively Shakespeare's conception of Henry V., the conduct of the action, and the supposed allusions to contemporary politics. The text follows substantially the Folio of 1623, variations being scrupulously recorded. The notes, though elaborate, are concisely presented; they are usefully explanatory and illustrative. In v. ii. 360 it does seem a perverse fidelity to retain the *l* of "Præclarissimus" when it is so obviously "the perpetuation of a blunder by the copyist." The volume is fully worthy of its place in the series.

Tennyson's "In Memoriam." Edited by Charles Mansford, B.A., late Vice-Principal, Westminster Training College. (2s. net. Swan Sonnenschein.)

A most patient, sympathetic, and instructive attempt "to exhibit the broad outlines of the poem, and to trace the invisible thread running through the songs and giving unity and continuity to the entire series." The writer modestly disclaims the attitude of a critic, and wishes to be taken simply as "a learner and teacher." The analysis and notes will be found most interesting and suggestive. The volume is daintily got up.

ENGLISH READERS.

Messrs. Routledge issue *The Ludgate Story Readers*, a new series in six Books, with an introductory volume forming a bridge from "Sonnenschein's Infant Primer, No. 2," under the editorship of R. R. C. Gregory (Eltham). The matter consists of stories, more or less graduated, with poetical pieces intermingled or appended, and a considerable number of generally good illustrations. The introductory volume (6d.) consists of three favourite stories divided into short sections for reading lessons, with 62 illustrations. Book I. (8d.) draws its stories mainly from Miss Edgeworth; Book II. (10d.), mainly from Mrs. Sale-Barker: both have word-exercises at the end, and each has 30 illustrations by Charles Robinson. Book III. (1s.) opens with "The Story of a Wolf," by Geraldine Butt, and contains also tales by Miss Edgeworth, Lord Brabourne, and others, and some attractive poems; and it has 16 illustrations by E. M. Tongue. Book IV. (1s. 3d.) consists mainly of stories from Andersen and Grimm, with simple and interesting poetical pieces, and biographies and notes at the end. There are about a score of illustrations by Edward Read. Book V. (1s. 6d.) is Harriet Martineau's "Feats on the Fiord," with a good appendix of poetical readings and 41 illustrations. Book VI. (1s. 6d.) is an adaptation of H. C. Adams's "The Boy Cavaliers," with pertinent poetical pieces, and notes and explanations appended. There are 16 illustrations by J. Ayton Symington. The series is well printed in bold type, and strongly and attractively bound. The volumes will supply interesting reading concurrently with others more specially graduated in the earlier stages.

Messrs. Routledge also add to the series of "Ludgate Standard-Authors Readers" two capital volumes that will be universally welcomed: *Stories of Ancient Greece* (Hawthorne), and an adaptation of *Don Quixote* (Cervantes), both edited also by Mr. Gregory (1s. 6d.

Digitized by Google

each). The former has 12 illustrations, the latter 45; and both are excellently got up.

Cassell's *Union Jack Series*, Book IV. (1s. 2d.), provides excellent and varied matter in prose and in verse, with plenty of apt illustrations in colour and in black and white.

Messrs. Nelson have now completed their fine series of geographical readers under the general title of "The World and its People." We have now before us the first volume and the last. *First Steps in Geography* (10d.) weaves elementary notions into a story, mostly of interesting dialogue—a charming and effective book. The final volume, *The World, with special reference to Greater Britain* (2s.), is most comprehensive, interestingly descriptive, and based on the latest knowledge. Its 416 pages are liberally adorned with 32 coloured plates and maps, and countless illustrations in monochrome, plans, &c. It forms a most able and useful completion of a well planned, instructive, and attractive series.

Mr. Marby furnishes the revised edition of the second volume of *The Marshfield Maidens and the Fairy Ordina* (which is, in plain terms, "a consecutive narrative embracing a complete course of Domestic Economy and Training for Home Duties"), by Mrs. W. H. Wigley (1s. 6d.), with a fresh set of illustrations in a more modern style. The text has not been altered, nor was there any need for alteration. It is practical and attractive.

GERMAN READING BOOKS.

Messrs. Hachette add to their attractive and useful series of "Popular German Authors" for elementary and intermediate classes *Die Geschichte von Kalif Storch* (Hauff) and *Die Wunder im Spessart* (Immermann), both very competently edited by Prof. Aloys Weiss, Ph.D., with brief biographical introduction, vocabulary (including necessary notes), and questions for oral practice. (6d. each.)

Messrs. Heath include in their excellent "Modern Language Series" a selection of three sketches from Detlev von Liliencron's *Kriegsnovellen*, under the title of *Anno 1870: Kriegsbilder*, edited, with biographical introduction, a fair number of helpful notes, and a full vocabulary, by Dr. Wilhelm Bernhardt, of Washington (1s. 6d.). Also *Niels mit der offenen Hand* (Heyse), similarly edited by Edward S. Jones, Professor of Modern Languages in South Carolina College (1s. 6d.).

Mr. J. W. Cartmell has re-edited for the "Pitt Press Series" *Das Jahr 1813* (Kohlrausch), originally prepared and edited by Dr. W. Wagner (3s., Cambridge University Press). The spelling has been modernized, and the notes have been entirely recast; and the proof sheets have been read by Dr. Breul. The volume has thus been thoroughly brought up to date. The four maps will be found very useful and handy.

Messrs. Williams & Norgate have issued a third revised edition of Herr Heinrich Weisse's *Exercises in German Composition* (3s. 6d.)—a systematically progressive course, taking German life and manners as its main materials. The authorized orthography has been adopted. Also a second edition of Herr Weisse's *Elements of German* (3s.), "intended to give students ample means of understanding the forms and constructions of the German language, and also of using them correctly in simpler composition." Both volumes possess high merits. They are based on large practical experience.

HISTORY.

Lingard's History of England, newly abridged and brought down to the Accession of King Edward VII. By Dom Henry Norbert Birt, O.S.B. With a Preface by Abbot Gasquet, D.D. (5s. George Bell.)

A thick volume of 645 pages, with inset marginal headings, seven useful maps, and six genealogical tables, in good type, and flexible binding. The work is a fresh abridgment of Lingard's very able History, with necessary corrections and with continuation from the Revolution of 1688. It is intended to supersede the epitome made some fifty years ago by James Burke, which has been widely used in Catholic schools. Many matters are more amply treated—for example, constitutional questions; and generally the book is brought up to the level of modern requirements. The later history suffers compression, as usual: the reign of Victoria is condensed into 23 pages. Though we differ from the author at many points, we have no doubt that the work will be found a great improvement on its predecessor and very efficient for its purpose.

Blake's Historical Charts. Nos. I. and II. (1s. 6d. net, and 9d. net. Sam. W. Blake, 200 Western Road, Sheffield.)

No. I. is a general chart of English history from 1066 to 1902. No. II. sets out the contemporary European rulers during the same period, with the treaties chronologically arranged. The compilation implies great care and ingenuity, and is lucid and effective. These charts ought to prove very useful in visualizing and fixing historical relations, especially if they are not pressed into task-work, but left largely to the curiosity of the pupils themselves.

BIOGRAPHY.

The Young Pretender. By Charles Sanford Terry, M.A., Professor of History and Archæology in the University of Aberdeen. (Methuen. "Little Biographies.")

Prof. Terry has extricated from the vast library of Jacobite literature—the literature of the '45 alone is enormous—and from the "obscuring haze of romance and tradition," a very simple, comprehensive, and accurate outline of the chequered career of Prince Charles. "He was, after all, very human, a high-spirited lad, rash and impetuous to a fault, and later a man broken by despair and irksome inactivity — an *homme sauvage*, addicted to the 'nasty bottle,' ill-treating his mistress, a brute to his wife, and generally his own worst enemy. Such a picture, for all the sad truth of it, will never wholly supplant the more generous one which the hearts of thousands have framed and will frame to the end of the chapter." The Prince had his full share of the Stuart temperament, and of the magnetism that inspired such blind and disastrous devotion. The Forty-Five, with the closing scene on Culloden Moor, is described with much spirit, and the subsequent wanderings in the Highlands with sustained interest. The later dark course of intrigue and demoralization is remorselessly depicted from historical records, with a very different, but still with a peculiar, interest. Prof. Terry thinks the Prince's "tragedy" was that "he was of the class of men blessed with a career, clear and unmistakable, yet doubly cursed in the inability to fulfil it." If this be so, we fancy the inability must be stretched farther than the fact that "Fate put him for ever outside the lists" after Culloden. The little biography has essential historical value. It is very nicely printed and got up, with twelve excellent illustrations, mostly portraits.

Henry Grattan. By Percy M. Roxby. (3s. 6d. net. Fisher Unwin.)

This volume is the Gladstone Prize Essay in the University of Oxford, 1902—very appropriately, for it deals with a most instructive and critical period in the history of Ireland, and recounts the great and noble career of one of Ireland's best loved sons and one of the most ardent Irish friends of England. With other great names in the same field, Mr. Roxby yet acquits himself with distinct credit. Naturally he gives main attention to Grattan's Parliament, and his treatment is eminently fair, though we should differ from him on certain leading conclusions. The work, though containing nothing essentially new, rises distinctly above the ordinary prize essay. It shows throughout independent and capable handling of difficult subjects, and it is conceived in excellent tone, and presented in fluent style. "Of the five great boons which Grattan sought for Ireland—Free Trade, Parliamentary Reform, Commutation of Tithe, Catholic Emancipation, and Legislative Independence—the first four are accomplished facts"; and Mr. Roxby shows very clearly how the fifth was set up and thrown down. "But, after all, the value of Grattan to Ireland is not to be estimated by his achievements. The memory of such a career is a priceless heritage to his countrymen for all time to come." The frontispiece portrait is from an engraving by Godby after Pope.

MENTAL SCIENCE.

Swain School Lectures. By Andrew Ingraham, late Head Master of the Swain Free School, New Bedford, Massachusetts. (5s. net. Chicago: Open Court Publishing Co. London: Kegan Paul, Trench, Trübner, & Co.)

Nine lectures, of an elaborately familiar or popular cast, wherein the author makes tentative approaches—flank attacks—upon the gist of important abstractions. "Psychology (about Minds)," "Epistemology (about Knowledge)," "Metaphysics (about Existence)," and "Logic (about Things as related)" seem to us to be better treated directly and pointedly than in an entertaining series of illustrative suggestions that are apt to overwhelm the real points to be seized. "A Universe of Hegel" is characteristically Hegelian: the neophyte will carry away only the nebulous. "Seven Processes of Language" and "Nine Uses of Language" are extremely fresh and interesting, and readily appreciable; and "Many Meanings of Money" at least impresses one fundamentally important element in the mechanism of modern trading. "Some Origins of the Number Two" is a humorously fantastic treatment in the interest of abstract conception. The lectures indicate a strong and flexible intellect and a practised capacity of effective expression.

The Study of Mental Science. By J. Brough, LL.D., Professor of Logic and Philosophy at the University College of Wales, Aberystwyth. (2s. net. Longmans.)

Five clever and resourceful "popular lectures on the uses and characteristics of logic and psychology." "Mental Science as ancillary to other studies"—as "helpful in raising the level of attainment in other liberal studies pursued side by side" with it—makes a strong claim on behalf of psychology and logic for a place in schemes of education; and the next two lectures impress the "independent value" of these two sciences. The remaining two lectures deal with "The Sources and Plan of Logic" and "Method in Psychology." The treatment seems to us to wander far too much "in some way of distant analogy," and to wrap the essential matters in variegated clouds of literary allusion. The points, when rescued from the wrappages, appear to be sound; and the literary expression is extremely

Digitized by Google

fluent and dexterous. But it is a wondrously roundabout way of doing business. Granted that it is effective for an oration, is it effective for instruction and persuasion?

RELIGION.

Corinthians II.: (1) In "Cambridge Greek Testament for Schools and Colleges"; (2) in "Cambridge Bible for Schools and Colleges." Both edited by A. Plummer, M.A., D.D., sometime Master of University College, Durham. (3s. and 1s. 6d. net. Cambridge University Press.)

(1) contains the Greek text (Westcott and Hort), an introduction dealing fully with pertinent literary considerations (genuineness of the Epistle, place and time, occasion and purpose, contents and results, language and style, &c.), an elaborate series of scholarly notes fairly meeting the difficulties—and truly the Epistle "bristles with difficulties"—and three appendixes treating special points at some length. Dr. Plummer now accepts "with much reluctance" the theory that the last four chapters were originally part of another and earlier letter—a theory that he at one time opposed vigorously. The handling is most conscientious and capable throughout. (2) is a reduced edition, suitable to younger students, and not requiring much, if any knowledge of the Greek. Both volumes are eminently judicious, instructive, and useful.

The Acts of the Apostles. Edited by A. E. Rubie, M.A. (2s. Methuen's Junior School Books.)

The introduction deals fully and lucidly with the authorship, title, date, materials, and text of the book, and sketches the contemporary conditions. The notes are full, fresh, and discriminating, and there is much useful matter in appendixes. Three maps illustrate Paul's missionary journeys. An attractive and useful edition.

Youth and Duty: Sermons to Harrow Schoolboys. By the Right Rev. J. E. C. Welldon, D.D. (3s. 6d. Religious Tract Society.)

Many pupils and friends—and others besides—will be glad to have this memorial of Dr. Welldon's religious teaching at Harrow, although the contents do not quite cover the full extent of that teaching. There are twenty sermons—brief, simple, manly, and practical.

MISCELLANEOUS.

The Case of The. Fox; being his Prophecies under Hypnotism of the period ending A.D. 1950. A Political Utopia. By William Stanley. (2s. 6d. Truslove & Hanson.)

The.—that is, Theodore—Fox, a poet of sorts, in hypnotic sleep induced by an egregious Dr. Aerius Pott, described in thirteen *séances* the development of public and social life in the next half-century, and Mr. Stanley edits the notes left by Dr. Pott. "Paris has now become the capital of the United States of Europe" (page 30). The Channel Tunnel "cost five hundred million pounds" (page 81). "Stanleytown-on-Thames" is figured as frontispiece—a model of city-building. The "chimney-pot" hat is gone, and men wear "soft vegetable silkoid shirts and collars" (page 189). Secondary education has also undergone change—we do not readily understand what. Those that like this kind of speculation will, no doubt, be interested in the poet's visions. The book is nicely got up; but the proofs should have been more carefully revised.

Mr. Frowde publishes the fifteenth edition (the first for publication) of the *Rules for Compositors and Readers at the University Press, Oxford*, by Horace Hart, M.A., Printer to the University, the English spellings being revised by Drs. Murray and Bradley (6d. net). The little book has grown gradually in practice, and every part of it has been carefully thought out. It may tend to secure a wider uniformity. It is intended, of course, only for general application, not to control or censure any particular style adopted on special grounds.

NEW EDITIONS.

Messrs. Chapman & Hall publish a "Student's Edition" of *David Copperfield* (pages xxxviii + 533), with biographical introduction, notes, and analytical list of characters, at the astonishing price of 1s. net. The type, though small, is clear.

Mr. Murray issues a new edition of Mr. H. G. Keene's interesting sketch of the *Literature of France*. (2s. "University Manual Series.")

Messrs. W. & A. K. Johnston publish a fresh edition of *Britain on and beyond the Sea*, by Cecil H. Crofts, M.A. (1s. 6d.), with good map.

We welcome a new edition of Dr. Charles A. McMurry's *Special Method in Geography*, revised and enlarged (3s. net, Macmillan).

The Religious Tract Society furnish a new shilling edition of *The Pilgrim's Progress*—the text carefully collated with Bunyan's final revision—in excellent print, and with eight coloured illustrations by Harold Copping.

Messrs. Williams & Norgate have issued a third edition (with additions) of Herbert Spencer's polemic *Against the Metric System* (3d.).

Messrs. Watts have published for the Rationalist Press Association a sixpenny edition of Rénan's *Life of Jesus*. The work is complete, and the volume is in excellent print.

In our notice of the third edition of Mr. Nield's *Guide to Historical Novels and Tales* last month we unfortunately omitted from the title the important word of limitation "*Historical*."

FIRST GLANCES.

CLASSICS.

Curtius. Book IX., Chapters 1-5 (Alexander in the Punjab). By H. B. Cotterill, M.A. 1s. Blackie.

[Good notes; vocabulary; map and nine illustrations.]

Pindar, Myths from. Chosen and Edited by H. R. King, M.A. 2s. 6d. George Bell.

[Dainty get-up; eight very fine illustrations.]

Tacitus. Annals XIII.-XVI. With introductions and notes abridged from the larger work of Henry Furneaux, M.A., by H. Pitman, M.A., Lecturer in Classics at University College, Bristol. 4s. 6d. Clarendon Press.

[Judiciously treated; useful map; excellent get-up.]

MATHEMATICS.

Geometry, Elementary, and Algebra, Notes on the Teaching of. By C. D. Chambers, M.A. 1s. net. Waghorn.

Geometry, Elementary Plane: Inductive and Deductive. By Alfred Baker, M.A., F.R.S.C., Professor of Mathematics, University of Toronto. 2s. Ginn.

["My object is to make the class-room in geometry a sort of workshop." "About one year's work for a class of beginners." Numerous exercises.]

Geometry, Experimental and Theoretical Course of. By A. T. Warren, M.A. 2s. Clarendon Press.

[Second edition; thoroughly revised; many new propositions and figures. Includes all propositions required for pass examinations at Oxford and Cambridge.]

Geometry, Observational, First Lessons in. By Mrs. W. N. Shaw. 2s. Longmans.

["To develop the study from the inductive side."]

Geometry on Modern Lines. For Elementary Students. By E. S. Boulton, M A. 2s. Methuen.

Geometry, Theoretical, for Beginners. Part III. By C. H. Allcock. 1s. 6d. Macmillan.

[Substance of Euclid II. 1-14, III. 35-37, IV. 10-16, with other important propositions, and a chapter on the Radical Axis; practical exercises; numerous riders.]

Logarithms and Decimals, Tables of, adapted to Business and Statistical Calculations. Compiled by F. G. Burkitt. 1s. net. Simpkin, Marshall, & Co.

Logarithms for Beginners. By Charles N. Pickworth, Whitworth Scholar. 1s. Whittaker.

MODERN LANGUAGES.

Blackie's Little French Classics.—(1) Portrait of Molière (Sainte-Beuve). Edited by Dorothea C. Bedford. 4d. (2) In Supplementary Series of Complete Plays: Fantasio and Il faut qu'une Porte soit ouverte ou fermée. Edited by W. F. P. Prior (in one volume). 8d.

[Well edited, and nicely printed and got up.]

Blackie's Little German Classics.—(1) A Book of German Songs (with music). Collected by Oswald B. Powell. 6d. (2) Der Neffe als Onkel (Schiller). Edited by the Rev. H. J. Chaytor, M.A. 1s.

[(1) Capital selection, varied and most interesting. (2) Brief biographical introduction and pointed notes.]

French Prose, English Passages for; for the use of Middle Forms. Edited by A. J. Perman, M.A. (Lond.). 1s. 6d. Blackie.

[115 extracts, very carefully selected; notes brief and judicious. "Should be sufficient for about two years' class work."]

Hossfeld's Series.—A New English and French Vocabulary. By Profs. A. Ludwig and H. Lallemand, Officiers d'Académie, &c. 2s. 6d. net. Hirschfeld.

[New edition, revised. Very careful and useful. Handy.]

Les Français d'autrefois: Stories from the History of France. By Jetta S. Wolf. 1s. 3d. Edward Arnold.

[From Clovis to Louis XIV. Simple and well written narratives. Notes brief and helpful. Vocabulary. Nicely got up.]

Récitations et Poésies; with Phonetic Transcript. Edited by Violet Partington, Brevetée. Illustrated by A. M. Appleton. 2s. Horace Marshall.

[Attractive selections for little folk. Effective illustrations.

ENGLISH LITERATURE—SCHOOL EDITIONS.

Aytoun. (1) Lays: Edinburgh after Flodden, The Burial March of Dundee, and The Island of the Scots. Edited by H. B. Cotterill, M.A. 6d. Macmillan. (2) Edinburgh after Flodden. 2d. Blackie. (English Classics.)

[(1) Introductions and notes full and instructive. (2) Select and pointed notes.]

Digitized by Google

Bacon. (1) Helps to the Study of Bacon's Essays. By T. E. Margerison, M.A. Ralph, Holland, & Co. (2) Bacon's Essays, I.–XX. Edited by A. F. Watt, M.A. 1s. 6d. Clive (University Tutorial Series). (3) Eight Essays of Bacon. Edited by E. H. Blakeney, M.A. 6d. Blackie (English Classics). (4) Selections from Bacon's Essays. By R. Oswald Platt. 6d. Macmillan.

(1) Introduction biographical and literary; notes judicious and adequate. (2) Brief introduction; notes on language and allusions concise and useful. (3) Very good notes. (4) Eight essays. Notes brief and fairly adequate; paraphrases of all the eight essays.]

Dickens. Notes on "David Copperfield." By Nina Stockwell, B.A. 9d. net. Normal Correspondence College Press.

[List of characters, summary of chapters, notes, brief sketches of prominent characters, test papers. Elaborate.]

Goldsmith. The Vicar of Wakefield (abridged). 3d. Oliver & Boyd ("Continuous" Readers).

[Four illustrations by W. Mulready, R.A. Nicely got up.]

Longfellow. Shorter Poems. With Notes by A. E. Layng. 2d. Blackie (English Classics).

[Attractive selection; brief, useful notes.]

Memory Passages, McDougall's, in Verse and Prose. 6d.

["For pupils in senior classes." Fifty-eight verse extracts; twenty-three prose. Well chosen; notes on authors. Firmly bound.]

Thackeray. Notes on "Esmond." By W. F. Smith, B.A. 9d. net. Normal Correspondence College Press.

[On the plan of the Notes to "Copperfield" (above). "Filia pulcria" (page 21), and "Prometheus Ninctus" (page 29), are bad misprints. "Vidi tantum" does not mean "I have seen so much of him" (page 29).]

History and Geography.

Geography, A New, of Great Britain and Ireland. By A. G. Haynes, B.A. 8d. Relfe.

["Specially written for Cambridge Local, 1904." Six maps (three commercial). Judicious and attractive.]

Geography Manuals, Chambers's Twentieth Century. (1) No. IV.: Scotland, Ireland, British North America, Australasia. (2) No. IVa.: The British Isles. 3d. (cloth, 4d.) each.

[With illustrations and maps (coloured and uncoloured). Carefully done, and sure to be useful.]

History, British, Problems and Exercises in. By J. S. Lindsey. Vol. II., Part II.: 1066–1216. 2s. Heffer (Cambridge); Simpkin, Marshall, & Co.

[Elaborate; useful to teachers.]

History in Biography, Black's. Vol. I.: King Alfred to Edward I. By Beatrice A. Lees. 2s.

[Comprehensive and fluent. Instructive companion to the ordinary history. Well illustrated.]

History of England, A First. By C. Linklater Thomson. Part V.: 1603–1680. 1s. 6d. Horace Marshall.

[Fresh and attractive. Illustrations and type good.]

"Our Empire" Series.—(1) India: Our Eastern Empire. (2) Australasia: The Britains of the South. By Philip Gibbs. 2s. 6d. each. Cassell.

[Four coloured plates and numerous illustrations in each. Varied and useful information simply presented. Pretty get-up.]

Religion and Morals.

Christian Science. By the Rev. E. W. Moore, M.A. 1d. S.A. General Mission (Wimbledon). Booklet Series, No. 26.

Gambling: an Analysis. By the Rev. G. Estwick Ford. 6d. Religious Tract Society.

["To show that gambling in all its forms is a sinful thing."]

Hymns, Ancient and Modern, Calendar of, for 1904. By Robert Sealy Genge, M.A. 2d. Frowde.

Morals, Practical. By John K. Ingram, LL.D. 3s. 6d. Black.

["A treatise on universal education."]

St. Matthew, The Gospel according to. Edited by E. Wilton South, M.A. 1s. 6d. Methuen. (Junior School Books.)

[Three maps. Notes simple and judicious. Instructive appendixes.]

Temperance Question, Some Frank and Friendly Words to Temperance People (and incidentally to some others) on the Present Position of the. By Thos. P. Whittaker, M.P. Farrington (Watling Street, E.C.).

Commercial.

Accounts, Household. By Kate Manley. 2s. Macmillan. Hooper & Graham Series.

[Useful as text-book in classes, as well as for private record.]

Book-keeping Examiner, The Junior, 1904. By John Thornton and F. Oliver Thornton. 6d. Macmillan.

[Second annual issue. Consists of recent examination papers, with notes. Examples well chosen; notes instructive.]

Digesting Returns into Summaries. By J. Logan, F.R.G.S. 1s. net. Dent.

["A collection of exercises, with remarks and hints."]

Précis Writing. By H. Latter, M.A. 3s. 6d. Blackie.

["For Army classes, Civil Service candidates, &c."]

Shorthand Exercises, The Student's Phonographic. By Arthur Fieldhouse. 2s. Pitman.

[Twentieth Century edition, revised. Elaborate; well graduated; for self-instruction as well as for classes.]

Shorthand, The Oxford. Nineteenth Edition. 6d. The Oxford Shorthand (Dover).

Miscellaneous.

Beauty Book, Aunt Kate's. 1d. Leng.

Books for the Bairns, No. 93.—Beauty and the Beast. An Original Fairy-Tale Play for Little Players. 1d. Mowbray House, Norfolk Street.

Burns, The People's Penny: Selected Poems. 1d. Leng.

[A considerable and representative selection.]

Calendar, The School. 1s. net. Whittaker.

["A Year-Book of Scholarships and Examinations at Schools, Colleges, and Universities for the year 1904." 17th year of publication. Elaborately compiled and handy for reference.]

Chemistry, The Pupil before and after taking. By Alexander Smith, Associate Professor of Chemistry, University of Chicago.

[Address to Chemistry Section of Central Association of Science and Mathematics Teachers. Reprinted from *School Science* (October). Luminous and suggestive.]

Cricket Handbook, 1904. 1d. Leng.

Dates, Mnemonics for. By "Pilot." 6d. net. Relfe.

["Contains a series of acrostic sentences, short, striking, and easily committed to memory; each of which is a key to a date."]

Diseases, Infectious, Memoranda on. By James W. Allan, M.B. 6d. Bristol: Wright.

[For use of school teachers. Calls attention to signs and symptoms.]

Education Act, London: How to make the best of it. 1d. Fabian Society.

Education, Report of the Commissioner of (United States), for 1902. Vols. I. and II. Washington: Government Printing Office.

[Most valuable compendium, reviewing educational movements not only in the United States, but also in other countries, and especially in Europe.]

Emerson's Thoughts: a Treasury of Wisdom. 2s. net. Gay & Bird.

[Handy and nicely got up. Suggestive extracts.]

Empire Day. Correspondence to January 1, 1904, between the Earl of Meath and many distinguished persons. Second Edition.

Field Experiments in Staffordshire and Shropshire, &c. Joint Report for 1903. Newport (Shropshire): Bennion, Horne, Smallman, & Co.

Fortune-Teller, The People's. 1d. Leng.

Information, General, Test-Papers. Book II. By P. Lyddon-Roberts A.C.P., and E. E. Denney, A.C.P. 6d. net. Key to the same, 1s. net. Normal Correspondence College Press.

[Very fair, generally; but too often far-fetched.]

Midland Agricultural and Dairy Institute. (1) Report of Experiments with Early Potatoes. (2) Report of Experiments on the Manuring of Mangels.

Milk, Variation in the, of a Dairy Herd, during the Summer Months. By T. S. Dymond, F.I.C., and B. W. Bull, N.D.A. Essex Education Committee.

National Union, The Citizens'. By John Tullis. 6d. Gardner (Paisley); Simpkin, Marshall, & Co.

Private Schools' Association (Incorporated) Year Book, 1904. 1s. net. 9 Bedford Court Mansions, W.C.

Radium Compounds, Experiments and Observations with; and the Colours of Iodides. By William Ackroyd, F.I.C., F.C.S. Reprint from the *Chemical News* (October 23, 30, 1903).

Rural Handbooks.—No. 10: Utility Rabbits. By E. C. Tibble. 6d. net. Dawbarn & Ward.

Songs, English, The People's. 1d. Leng.

[Good and liberal selection.]

Oxford Classical Texts. 34 Volumes have now been published. List on application.

School World (reviewing Professor Butcher's "Demosthenes") said: "English scholars and schoolboys alike will welcome this new Demosthenes. Scholars will find a sound text carefully edited, and an admirable account of the MSS., such as they will seek long ere they find elsewhere; besides the discussion of these, their description fills five pages, and includes a list of the papyrus fragments. Schoolboys will rejoice to see a substitute for the hateful Teubner print. Both will, for the first time, have the MS. evidence clearly set forth at the foot of the page in a handy edition. We predict for it a speedy sale and a large one; we have found these Oxford Texts admirable for school use in all respects except one—that they are sometimes rather too thick."

Aeschylus. Persae & Septem Contra THEBAS. Edited by A. Sidgwick, M.A. Extra fcap. 8vo, cloth, 3s. each.

Selections from Gower's Confessio AMANTIS. For School use. Edited, with Introduction, Notes, and Glossary, by G. C. Macaulay, M.A. Fcap. 8vo, cloth, with a Frontispiece. 4s. 6d.

Sir Thomas More's Utopia. Edited, with Introduction and Notes, by J. Churton Collins, M.A. Crown 8vo, cloth, 3s. 6d.

Dryden — An Essay of Dramatic POESY. Edited, with Notes, by the late Thomas Arnold, M.A. Revised by William T. Arnold, M.A. Third Edition. Extra fcap. 8vo, cloth, 3s. 6d.

Shelley's Adonais. Edited, with Introduction and Notes, by William Michael Rossetti. Revised with the assistance of A. O. Prickard, M.A. Second Edition. Crown 8vo, cloth, 3s. 6d.; or 5s. in cloth extra.

John Bull in France; or, French as it is Spoken. By Leon Delbos, M.A. Fcap. 8vo, cloth, 2s.; or, on Oxford India paper, 2s. 6d.

A History of France. With Maps, Plans, and Tables. By G. W. Kitchin. Vol. III (1624-1793). Fourth Edition, Revised by A. Hassall. Crown 8vo, cloth, 10s. 6d.

Kinderfreuden. Von A. E. C. Teilweise von H. Baynton. Illustriert. (A Simple German Reading Book.) Crown 8vo, cloth, 1s. 6d.

The remainder of 15359 is unavoidably held over this month.—Ed.

15435. (Professor Nanson.)—If t_r be the arithmetic mean of the r-th powers of n positive quantities which are not all equal, prove that t_1, t, $t_3^{\frac{1}{2}}$, $t_4^{\frac{1}{3}}$, ... are in ascending order of magnitude.

Solution by Colin M. Ross.

$$\frac{(A+A+\dots \text{ to } a \text{ terms})+(B+B+\dots \text{ to } b \text{ terms})+\dots}{a+b+\dots} > (A^aB^b\dots)^{1/(a+b+\dots)}$$

(Hall and Knight's *Higher Algebra*, § 253), *i.e.*,

$$[(aA+bB+\dots)/(a+b+\dots)]^{a+b+\dots} > A^aB^b\dots \quad \dots\dots\dots(1),$$

In (1) substitute A^p, B^p, ... for a, b, ...; also A^{r-p}, B^{r-p}, ... for A, B, ..., where $r > p$; then

$$[(A^r+B^r+\dots)/(A^p+B^p+\dots)]^{A^p+B^p+\dots} > (A^{A^p}B^{B^p}\dots)^{r-p}\dots\dots(2),$$

In (1) again substitute A^p, B^p, ... for a, b, ... and A^{s-p}, B^{s-p}, ... for A, B, ..., where $p > s$; then

$$[(A^s+B^s+\dots)/(A^p+B^p+\dots)]^{A^p+B^p+\dots} > (A^{A^p}B^{B^p}\dots)^{s-p};$$

therefore

$$[(A^p+B^p+\dots)/(A^s+B^s+\dots)]^{A^p+B^p+\dots} < (A^{A^p}B^{B^p}\dots)^{p-s}\dots\dots(3),$$

Hence, as $r-p$ and $p-s$ are positive quantities, from (2) and (3),

$$[(A^r+B^r+\dots)/(A^p+B^p+\dots)]^{p-s} > [(A^p+B^p+\dots)/(A^s+B^s+\dots)]^{r-p}$$

Put $s = 0$; then

$$[(A^r+B^r+\dots)/(A^p+B^p+\dots)]^p > [(A^p+B^p+\dots)/n]^{r-p};$$

therefore $[(A^r+B^r+\dots)/n]^p > [(A^p+B^p+\dots)/n]^r$,

i.e., $t_r^p > (t_p)^r$ .....(4).

Putting $r = 2, 3, 4, \dots$, and $p = 1, 2, 3, \dots$, successively in (4), it follows that $t_2^2 > t_1$, $t_3^3 > t_2^2$, $t_4^4 > t_3^3$, and so on; therefore t_1, $t_2^{\frac{1}{2}}$, $t_3^{\frac{1}{3}}$, $t_4^{\frac{1}{4}}$, ... are in ascending order of magnitude.

15487. (A. M. Nesbitt, M.A.)—Resolve into factors

$$\begin{vmatrix} a & . & . & l & . & . \\ . & b & . & . & m & . \\ . & . & c & . & . & n \\ g & . & . & d & . & . \\ . & h & . & . & e & . \\ . & . & k & . & . & f \end{vmatrix}.$$

Solutions (I.) *by* R. F. Whitehead, B.A.; (II.) *by* Prof. Sanjána, M.A.; (III.) *by* W. F. S. Churchill.

(I.) Expanding by Laplace's method,

$$\text{determinant} = (ad-gl)\begin{vmatrix} b & . & m & . \\ . & c & . & n \\ h & . & e & . \\ . & k & . & f \end{vmatrix} = (ad-gl)(be-hm)(cf-kn).$$

(II.) If $a = gl/d$, we have the first column equivalent to the fourth multiplied by g/d; so that the determinant is zero. Hence $(ad-gl)$ is a factor; so also are $(be-hm)$ and $(cf-kn)$. There is no numerical factor, as the chief diagonal constituent is $abcdef$.

(III.) $$\Delta^2 = \begin{vmatrix} a & . & . & l & . & . \\ . & b & . & . & m & . \\ . & . & c & . & . & n \\ g & . & . & d & . & . \\ . & h & . & . & e & . \\ . & . & k & . & . & f \end{vmatrix} \begin{vmatrix} . & . & l & . & . & -a \\ . & -m & . & . & b & . \\ n & . & . & -c & . & . \\ . & . & d & . & . & -g \\ . & -e & . & . & h & . \\ f & . & . & -k & . & . \end{vmatrix}$$

$$= \begin{vmatrix} . & . & A & . & . & B \\ . & . & . & . & C & . \\ -A & . & . & D & . & . \\ . & . & -D & . & . & E \\ . & -C & . & . & . & . \\ -B & . & . & -E & . & . \end{vmatrix}$$

where $A = an-lc$, $B = af-lk$, $C = hm-be$, $D = dc-ng$, $E = fg-dk$

$$= C^2\begin{vmatrix} . & A & . & B \\ -A & . & D & . \\ . & -D & . & E \\ -B & . & -E & . \end{vmatrix} = C^2(AE+BD)^2,$$

$AE+BD = (ad-lg)(fc-nk)$;

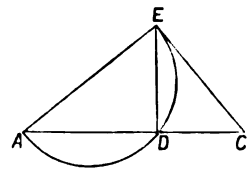
therefore $\Delta = \pm C(AE+BD) = \pm(hm-be)(ad-lg)(fc-nk)$

$= (ad-lg)(be-hm)(fc-nk)$.

Note.—This method of evaluating determinants by multiplying by the determinant reversed with the signs of alternate columns changed is of great use, and does not seem to be specially mentioned in text-books.

Geometrical Note.—To construct a right-angled triangle with the three sides in geometrical progression, the hypotenuse being given.

By Constance I. Marks, B.A.



Let AC be the given hypotenuse. Divide AC at D as in Euclid II. 11, so that

$$AC \cdot DC = AD^2.$$

From D draw DE perpendicular to AC, and with C as centre and radius equal to AD describe a circle cutting DE at E. Join AE and on AE as diameter describe the semi-circle ADE. AEC is the required triangle. For $AC \cdot DC = AD^2 = CE^2$; therefore CE is a tangent to the circle ADE, and, since AE is a diameter, therefore the angle AEC is a right angle; hence $AE^2 = AC \cdot AD = AC \cdot CE$.
